# Get to Know Heartly Horse House

*Heartly Horse House Equine Reproduction Center in Starikovo (Shakhovsky District, Moscow Region) opened its doors in April of 2018. It is the only reproduction center of its kind in Russia. Pictured Above: Elena Hartley (owner of HHH) with her Elite-rated champion Budenny stallion Lankaster.*

Heartly has the largest online database and catalogue of top quality stallions in Russia. They arrange all aspects of collection, storage, and transportation from their world-class, full-service facility. They are equipped with all of the latest modern reproductive technologies for artificial insemination and can accommodate collection on site and mobile, breeding with fresh, cooled, and frozen semen, and they have a cryobank for frozen storage. In the future, the center will also offer frozen embryos for embryo transplantation.

Their cryobank already contains the frozen semen of Europe's leading competitive stallions such as Diamant de Semilly, Cornet Obolensky, and Contender I. Heartly Horse House is committed to breeding for improvement and genetic diversity by offering only the highest quality stallions with proven show and performance records, and the most valuable genetics. They have a full service equine reproduction facility as well as a training barn featuring their own suite of competition mounts and breeding stock.

# Golden Stallions International

Golden Stallions International is a US-based entity that has connected with Heartly Horse House to bring rare and valuable genetics to breeders in the US from Russia for the first time, with a special focus on Russia's "Golden Horses"--the endangered Don and Budenny horse breeds. At a time when worldwide numbers of Budenny and Don horses have plummeted, the possibility of artificial insemination from Russia comes at the perfect time. GSI was founded in 2019 by Karina Rapp, the president of the North American Budenny Horse Registry, with the goal to encourage genetic diversity by facilitating access to frozen AI and Russian bloodstock. GSI offers North American breeders the opportunity to join in on a group shipment of frozen semen from rare-breed stallions of their choice.

All foals born through AI with doses from Heartly Horse House are fully eligible for registration with VNIIC, the All-Russian Scientific Research Institute of Horse Breeding. In addition, breeders are eligible for 1-year free pilot membership at NABHR for 2020, and free registration (must have DNA parent verification) with NABHR for any Budenny, part-Budenny or part-Don foals born in 2021.

# Don & Budenny Breeding Specifics

With **400 Budenny mares** and **180 Don mares** worldwide, the Golden Horses of Russia are in dire straights. So how do we breed for more Budennies when there are so few of them, especially in the United States? Budenny and Don horses can be crossed to solid-colored, non-gray Thoroughbreds and Arabians. You'll see a "blood purity" fraction mentioned. This indicates the amount of tribal, or native blood compared to Thoroughbred or Arabian blood.  $5/16-3/4$  = Budenny horse with strong amounts of native blood;  $13/16$  = a high-blood Budenny;  $7/8+$  = not tribal (aka not enough native blood; these can be crossed back to Don or Budennies create further generations of Budennies). Keep this in mind when considering the status of your resulting foal.

1. Don or Budenny + Budenny = Higher % Tribal Blood Budenny --> Pureblood
  - **Best cross for existing high-blood Budenny mares in North America**
2. Don + Arabian = Arab-Don --> Acceptable Breeding Stock, especially mares
3. Budenny + Thoroughbred = High-Blood Budenny --> Good Breeding Stock
  - **Best cross for new breeders to start their program**
4. Budenny + Arabian = Arab-Budenny --> Acceptable Breeding Stock, especially mares
5. Budenny or Don + Any Other Breed = part-bred Budenny or Don --> Great Ambassadors!

## !!! Important !!!

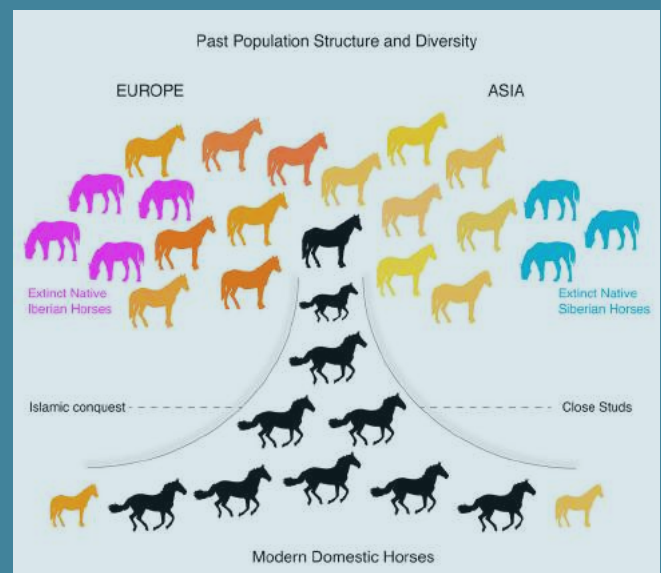

Heartly Horse House currently freezes equine semen doses in tubes rather than straws. Please make sure your vet knows this and is okay with handling tubes.

# Why Do Rare Breeds Matter?

by Karina Rapp, First Published November 4, 2019

Genetic diversity is VITAL to the future of the horse industry worldwide. In 2019 the Pegasus Project released results of genetic studies that track over 5,000 years of horse management and discovered that the development of modern horse breeding practices has caused a dramatic drop in genetic diversity in the last 200 years. This coincides with major cultural and technological shifts that followed the 2nd Agricultural Revolution and the Industrial Revolution of the 17th to 19th centuries when people began to view animals as a means of profit and production instead of a vital part of everyday life. The development of closed stud farms and the heightened mentality of breeding for a purpose resulting in certain traits being selected for again and again, as is seen in the development of the modern Thoroughbred racehorse which occurred at this time.

Choosing only the most popular stallion lines for breeding has massively decreased Y-chromosome diversity and increased genome-wide mutations and the accumulation of negative variants (such as HYPP and NFS) which can cause disease and major health issues. See the infographic for an illustration of just how limited and restricted modern horse breeding genetics have become. Each of those colors represents a genetic lineage and its variants, almost all of which have been lost. Rare breeds possess genetic traits, resistance to disease, and special adaptations NOT present in the 'popular' pool of breeding animals and can dilute mutations present in other breeds.

*Fages et al. 2019. 'Tracking Five Millennia of Horse Management with Extensive Ancient Genome Time Series', Cell 177(6), 1419-1435.*

Rare breeds are therefore integral for maintaining population health and stability. This is true for all species of rare breeds, including other livestock such as pigs, cattle, and chickens. Projects like the Livestock Conservancy in the United States and the Rare Breeds Survival Trust in the United Kingdom are dedicated to making sure that the important rare breeds of yesterday are not forgotten or lost for tomorrow.

## EXPLORE | STALLION CATALOGUE

Pictured is Kometa, a US-born Budenny mare, and her 2019 half-Akhal-Teke colt Ofir. There are only 400 Budenny mares worldwide, making for an incredibly endangered breeding core. Akhal-Tekes, while having made a good comeback, are still rare and in need of careful protection. How can you help? Learning more about rare breeds is the first step, and educating others about what you have learned is the second! Contact organizations such as the North American Budenny Horse Registry (NABHR) or the ATAA (Akhal-Teke Association of America), especially if you are interested in acquiring breeding stock and becoming part of the solution! Dedicated breeders and fans are essential to the survival of these rare and important genetics which are integral to the health of the future horse population worldwide.

# Pilot Breeders

Take advantage of our Special Pilot Breeder Discount\* before it's too late!

Our stallion owners have generously offered **two doses per stallion** at dramatically reduced rates as an introductory special and to help us establish an American breeding core.

"Lankaster" / Photo by Makarova Viktoria

It is available to solid-colored, non-gray Budenny, Thoroughbred, and Arabian mares only. This is first come, first served, and limited to two discounted doses per person (mix and match or two doses of the same stallion if available). Use Code **#PILOTBREEDER** in your inquiry.

Live Foal Guarantee DOES NOT apply to discounted doses.

"Beresten" / Photo by KFH "Dar"

- **LANCASTER:** ~~\$650~~ \$250 per dose
- **BENAR:** ~~\$700~~ \$405 per dose
- **TAGIL:** ~~\$600~~ \$200 per dose
- **TEBRIZ:** ~~\$625~~ \$225 per dose
- **BERESTEN:** ~~\$650~~ \$250 per dose

# Order Now!

## **\* Currently Accepting Refundable Deposits of \$200/Dose \***

Payment in full is required after February 2, 2020. DISCLAIMER: Because shipment from Russia is complicated and this is the first shipment of its kind, there is a possibility that the shipment might not make the proposed shipment date. If this occurs, buyers will be notified and deposits will be fully refunded on February 1, 2020; buyers will be given the option to keep their reservation (with paid deposit) but with an unspecified shipment date. Buyers will be notified ASAP of any changes to the shipment date!

### **Shipment Details**

We are aiming to fill an order of no less than 20 doses of frozen semen by April 2020; estimated shipment date is the second week of April. Shipping and handling charges for international transport from Russia to the United States is **\$350 per dose**, subject to change based on the size of the order.
