COVID-19 Statement of Efficacy

Claims Against the Emerging Viral Pathogen COVID-19

Halosil's HaloMist™ has demonstrated effectiveness against viruses similar to the Coronavirus Disease 2019 (COVID-19) on hard, non-porous surfaces. Therefore, HaloMist can be used against COVID-19 when used in accordance with the directions for use against the small non-enveloped viruses Feline Calicivirus (surrogate for Norovirus) and Minute virus of Mice (MVM) on hard, non-porous surfaces. Refer to the CDC website at <https://www.cdc.gov/coronavirus/> for additional information.

Halosil International Inc., the registrant, may begin communicating these statement(s) upon notification on the CDC website www.cdc.gov/outbreaks of an outbreak of an emerging small non-enveloped (or an emerging large non-enveloped and/or enveloped viral pathogen). The registrant shall cease and remove all such non-label communications intended for consumers no later than 24 months after the original notification of the outbreak on the CDC website, unless the agency provides guidance to the contrary due to continued public health concerns. The emerging pathogen claim language may remain on the HaloMist Master Label registered with the EPA.

The registrant agrees that paragraphs above shall become immediately void and ineffective if registration for use against COVID-19 is suspended or cancelled or no longer meets the criteria for a disinfectant claim (see EPA Product Performance Test Guideline 810.2200). In addition, evidence of ineffectiveness against any pathogen in a less-resistant Spaulding category would also be grounds for voiding the above paragraphs.
