

Interweaving cognition, consciousness and intention: **a magical synergy!**

Phil Mollon PhD DCEP

Psychoanalyst & Clinical Psychologist

President of ACEP

A potent synergy

- Combining:
 - Subtle energy activation
 - Altered states of consciousness
 - Carefully chosen words
 - Intention and command

An emergent theme in energy psychology

Factors traditionally associated with
'magic'

Themes and topics

- Accessing information: horizontally attuned to the client – ‘vertically’ attuned to (Primal) Source
- The linguistic access code:
 - 1. I am ignorant and in error
 - 2. I ask for forgiveness as I forgive
 - 3. I seek truth and guidance
- Fractals of the cosmos – the 12 point grid
- Use of intention and command – words as energised symbol codes – sound and voice and word as the primal initiation of reality
- Light and colour – and visual image – as the second level of creation
- Desynchronising the energy fields

Levels and dimensions

- Multiple levels and dimensions of human beings, and of the universe in general
- Covert levels and dimensions beyond conventional particle-based space-time
- Realms of information waves, responsive to intention and command
- Linking and unlinking of dimensions – the subtle energy system as an interface
- Present and parallel realms
- Physicists William Tiller and Claude Swanson provide contrasting but complementary models of higher-dimensional realities – both seeking to take account of ‘paranormal’ or ‘anomalous’ phenomena

The inherent steps of energy psychology

- Practitioners start by learning a technique – usually a particular 'brand' – often assuming that is the only brand
- Awareness broadens to other EP techniques – and the beginnings of appreciation of common principles amongst the wider genre
- Tapping or holding acupuncture and chakra points is just a first step
- Engaging with the subtle energy system seems naturally to stimulate or enhance interest in higher dimensions and spiritual realms
- Many practitioners begin to give less emphasis to tapping or holding and instead make more use of intention and prayer-like activity
- A meditative or altered state of consciousness seems a natural feature of the work

William Tiller's research and theory

- Duplex Reference Frame:
- The electrical particle realm – 4 dimensions of space and time (D-space)
- The magnetic information realm – 4 further dimensions (R-space)
- Plus the dimensions of emotion, mind, and spirit – thus 11 dimensions, and potentially more.
- R-space is directed by emotion and mind
- A hypothesised substance called Deltrons link the otherwise separated realms of D-space and R-space
- Deltrons are enhanced by meditation

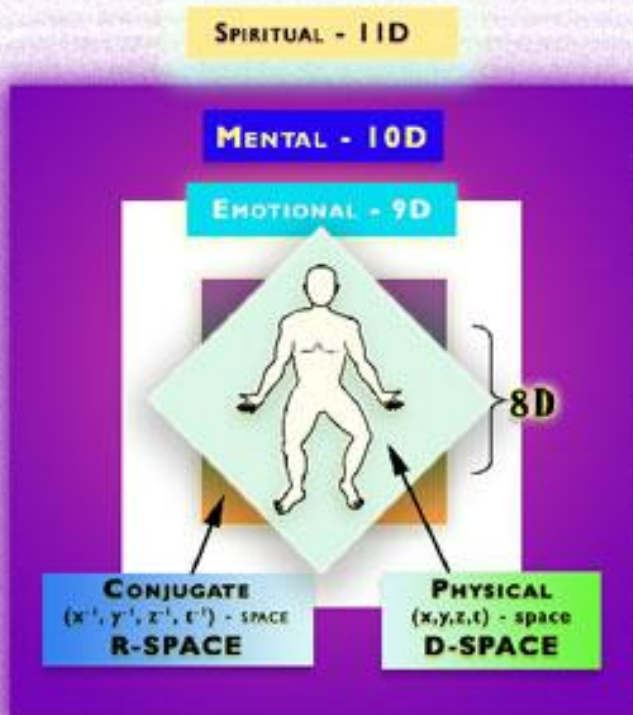

Tiller's D-space and R-space

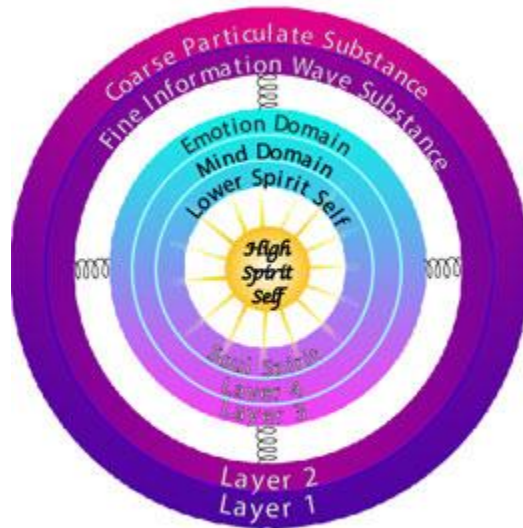

Higher Dimensional Framework

The picture on the left represents a particular biconformal Base-space (8D) for expressing "physical reality" imbedded in Higher Dimensional Domains of Reality.

CONCEPTS
HIGHER DIMENSIONAL FRAMEWORK

Tiller's layers of the human being

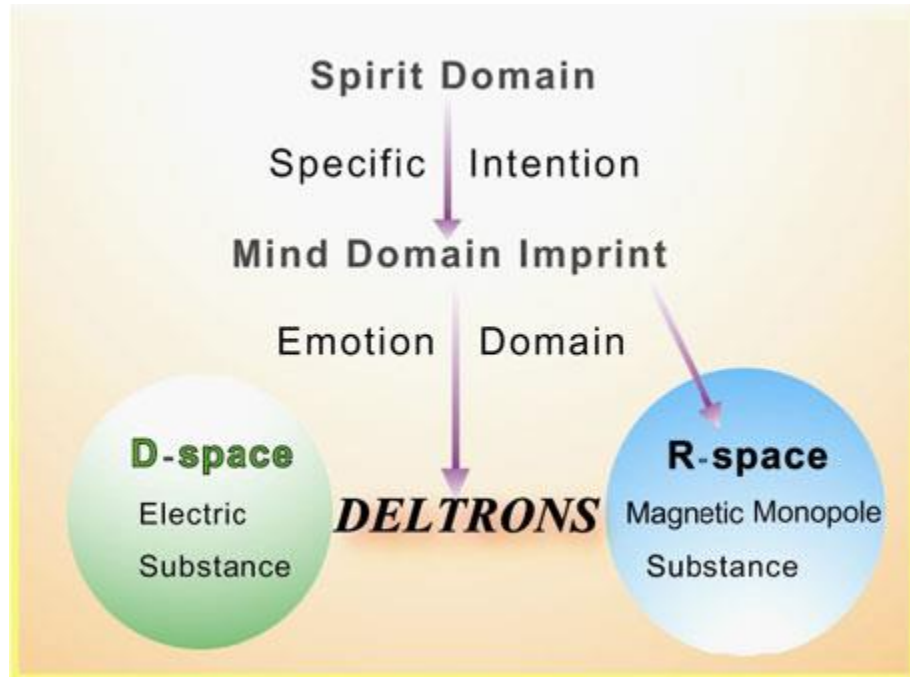

Biobodysuit Metaphor

- Each layer has unique substance and infrastructure
- The outer 2 layers constitute temporal physical reality
- The middle shell is non-temporal and could be called the soul
- The layer infrastructure and the coupling between layers largely determine the state of the wellness of the whole person of Wellness of the Whole Person

CONCEPTS
BIOBODYSUIT METAPHOR

Spirit, mind, and emotion affect changes in the physical realm via Deltron coupling

Intention and its Path of Action

An illustration of one possible process path whereby spirit produces action in the physical domain.

CONCEPTS
INTENTION AND ITS PATH OF ACTION

Gravitation vs Levitation

- Substances in the electrical-particle (atomic) realm exert gravitational attraction
- Substances in the magnetic wave (etheric) realm exert a repulsive force of levitation
- Think of the ‘light-headed’ or ‘spacey’ feeling people report after energy healing work!

The human energy system functions at a higher gauge!

- The human energy system, of meridians, chakras, and other components, operates at a higher dimensional level – linked to Tiller's R-space
- When we stimulate the subtle energy system, we are accessing R-space
- This R-space is highly responsive to intention
- As a result, energy modalities are highly effective!

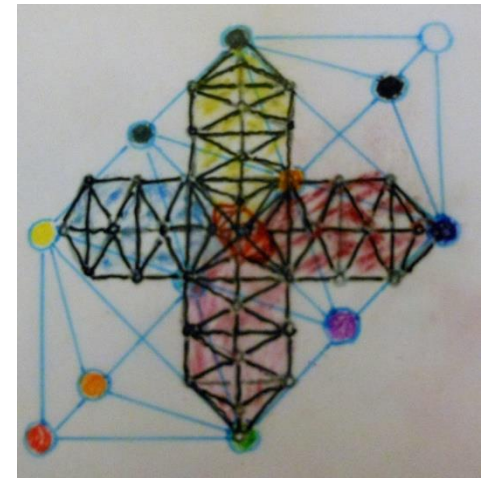

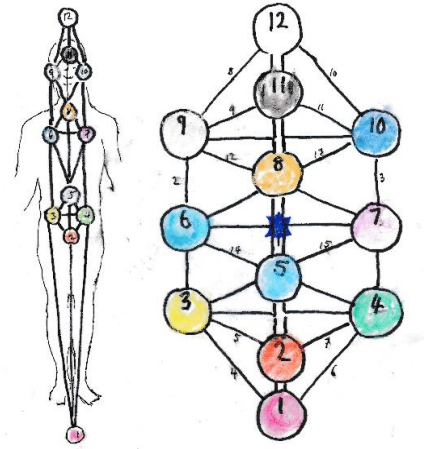

The 12 point lattice – a basic fractal?

12 point grids fit together precisely, forming a continuous lattice

Think of grids within grids, from the tiniest to the cosmic

Think of multiple dimensional planes

Is this a description of an aspect of the hidden energetic structure of the universe?

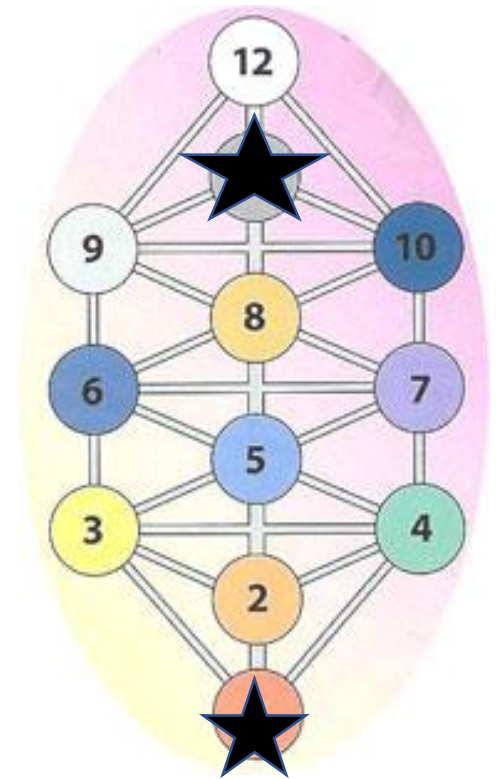

Qualities encoded in the signets of the embodied 12 point grid – tentative outline

1. Basic security on the earth – availability of life-sustaining air, food, and water
2. Basic security with parents – the mother-father template
3. Finding life, friendship, and love with others
4. Sexuality
5. Being a centre of initiative
6. Connecting and bonding with higher dimensions
7. Receiving information and guidance from higher dimensions
8. Expressing higher dimensions in words and actions
9. Hearing the word of God/Source/Spirit
10. Understanding the word of God/Source/Spirit
11. Seeing with higher dimensional vision
12. Embracing a higher dimensional identity

What is errant coding in the 12 point grid

- Most forms of emotional and energetic perturbation are not encoded in the 12 point grid. They express ordinary stress, distress, and the psychodynamics of the mind.
- These forms of distress and psychodynamic conflict can be addressed through work with meridians and chakras (and talking!)
- Errant coding in the 12 point grid is a more fundamental template structuring recurrent dysfunctional patterns in the person's mind, behaviour, and life patterns. At this level, these dysfunctional patterns are not motivated
- Errant coding concerns fundamental beliefs and prohibitions – analogous to basic restrictions or errors built into a computer's operating system (thereby affecting all programmes run on the computer)
- Errant coding in signets 1-4 create dysfunctional experience in relation to feeling at home on the earth, relationships with others, and sexuality.
- Errant coding in signet 5 creates problems in relation to autonomy and shame
- Higher levels errant coding create prohibitions or distortions in relation to spirituality and the higher dimensional perception

The Blue Diamond position

- The Blue Diamond is at the center point of the 12-point grid
- Anatomically, it is just below the collar bones in the center of the upper chest
- Think of it as the access point to your higher dimensions
- Place two fingers of one hand there – and two fingers of the other hand on the heart chakra
- The Blue Diamond may be expanded, so that you are contained within this larger Blue Diamond – the sacred inner healing space

Accessing higher dimensional guidance

- Centre point under collar bones
- Blue Diamond – becomes a blue flame with a soft pale silver-white aura
- Linguistic access code (neutralising the ego):
 - I am ignorant and in error
 - I ask forgiveness and I forgive
 - I seek truth

The spinning energy fields

- Top clockwise – bringing in fresh energy – the rainbow shower
- Bottom counterclockwise – taking toxins safely into the earth for recycling – *and* receiving the gifts of earth energy

The Power Correction for Reversal

The Spinning Fields of Flame !

- **Uses imagery, intention, and breath**
- **Activates the merkaba fields**
- **The silver-white sphere ... and the blue diamond core**
- **Counter-clockwise [lower] ... negativity is sucked down into the core of the earth**
- **Clockwise [upper] ... the 'rainbow shower'**

Characteristics of health living systems

- The system has healthy boundaries – allowing needed elements in, and expelling or repelling unwanted elements. These boundaries must be neither too rigid nor too porous.
- *The system has the capacity to perceive truth – and privileges truth over lies. It correctly identifies what is good.*
- Each component of the system is held in balance by its relationship to every other component. No one component, or group of components, usurps the legitimate place or function of others.
- Fresh energy and truthful information (nutrition) constantly enters the system, whilst waste and degraded information is expelled to be recycled in the wider system.
- In sick people, these functions are not operating well

Possessed by 'lies'

- Some people will muscle test strong to simple false statements (of no emotional significance) – and weak to simple true statements
- This can be an indication their system has been overwhelmed by 'lies' – false or corrupted information
- They have lost the ability reliably to distinguish truth from lies
- They may have come from outside (e.g. family) but are now repeated internally
- 'Deleting the lies' can be a powerful process

Deleting 'lies' and corrupted information from all dimensions

There may be corrupted information/lies in any of the 12 dimensions

So we can 'command' deletion of 'lies' from:

D1 The physical body

D2 The emotional body

D3 The mental body (of thoughts and beliefs)

And D4-12

[And also delete energy parasites etc from the various dimensions – bless, heal, remove]

Whilst we download 'truth' from the higher dimensions

- Request downloading of the frequencies, codings, and programs of 'truth' from the higher dimensions
- Based on the person's 'organic living template'
- From the clockwise spiral of the silver rainbow sphere
- Ultimately, from Source

- [Whatever is removed must be replaced with what is positive and truthful]

Multiple 'synchronized universes'

- Multiple universes exist within the same 'space'
- The fundamental particles of each are in phase with each other, are '*synchronized*'
- Particles not in phase do not 'recognize' each other and cannot communicate

Main points of Swanson's theory

- [1] The total energy and information in the universe is constant – as entropy increases in one location, more order emerges in another location.
- [2] Our perceived universe consists of particles that are synchronized in terms of their angular momentum and direction of spin. Other universes may coexist, synchronized on different angular momentum and direction.
- [3] The basic fabric of the universes consists of torsion waves – right and left spinning fields generated whenever particles or bodies spin. These carry information and time. Both time and information can become more or less dense. Torsion waves carry time and information from one place to another place.
- [4] Our perceived reality is a hologram resulting from the interaction of informational waves from both past and future.
- [5] Human consciousness generates torsion waves. Coherent torsion waves affect physical reality and can also synchronize to other dimensions and realities.

Total energy and information is constant

- First, there is an assumption that the total energy and information in the universe is constant – as entropy increases in one location, more order emerges in another location. One observation supporting this hypothesis is that the universe does not appear to be winding down – stars collapse and become black holes, but new stars also form.

Particles within the same universe are 'synchronized'

- A second assumption is that, at the level of the tiniest particles, those that comprise our universe are all 'in phase', in terms of their direction of angular rotation and frequency – they are phase-locked. All such particles register each other as part of the same universe – they 'read' and 'see' each other and are thus 'synchronized'. Particles that are not phase-locked will be 'invisible' within our universe. There can be many different universes within the same 'space', each consisting of their own synchronized phase. Other-dimensional beings may consist of synchronised non-physical constellations of consciousness.

Synchronization – analogy with strobe light

STROBE SYNCHRONIZED WITH FAN -
BLADES ARE VISIBLE

STROBE NOT IN SYNCH WITH FAN-
BLADES ARE NOT VISIBLE

'Torsion' fields

- Torsion fields: spinning or spiralling waves of energy and information – essentially subtle energy – that are emitted by a wide range of actions, geometrical shapes, chemical processes, atomic and subatomic particles, and human consciousness.
- At points of increasing entropy – such as evaporation of acetone – torsion waves are emitted that turn a pendulum spinning to the right.
- At points of decreasing entropy (negentropy), such as plant growth, torsion waves are emitted that would turn a pendulum spinning to the left. These are different from electromagnetic waves.

Desynchronizing the energy fields

(inspired by Swanson's theory of the synchronized universe)

- Go into the Blue Diamond position
- Target the energy fields of the problematic pattern. Sufficient work must have been done to enable the person's system to be willing to release the entire pattern
- Go back in time to heal the origins
- Go forward in time to heal the future – and to a point in the future when the energy field no longer exists
- Go to the present, to heal the present expression of the energy field
- Command all the fundamental particles of the energy field to desynchronize – to go out of phase – to become complete entropy – all information lost and returned to Source
- Welcome the new energy field – the gift from Source (speak the words that come spontaneously)

The paradoxical energy test result!

- Test for the presence of the problem – should test no
- Test for whether the problem was ever present – this too will test no if the desynchronization has been successful
- The system no longer registers the problem as ever having been present
- It has been deleted!

**[THOUGHT
DELETED
BY
USER.]**

The 'power of now' – the choice point

- The present moment provides an opportunity for change – a new decision (compare also with the effects of meditation)
- Contrast with being fixed in images of the past – or unchosen images of the future
- For some people, the choice of a future different from the past is felt to be not possible
- The prospect leads to panic – *the threat of annihilation of the imaginary self perceived as real*
- Analogy with psychiatric diagnostic labels – experienced as constraining, yet also reassuringly structuring.

Manifesting our goals and desires

- Once the sabotage patterns are removed
 - And our energy system is functioning well
 - We can manifest our desires (provided they are for the highest good)
-
- Enter the blue flame
 - Into the crystalline sphere
 - You are the projectionist at the centre of your hologram

Ten 'commandments' for ethical EP

- 1. Intend, as far as possible, to do no harm. Sometimes, despite our good efforts, we do inadvertently cause harm. We must then try to put this right as best we can.
- 2. Seek to serve (rather than exploit)
- 3. Do not command higher fees from clients than they can realistically afford.
- 4. Respect the client's autonomy. Do not:
 - Control or manipulate
 - Violate boundaries
 - Impose your own agenda
 - Impose your own values
 - Impose your own beliefs

Ten 'commandments' cdt

- 5. Do not assume you 'know'. Instead, acknowledge your ignorance and error – seek truth
- 6. Do not promise more than you can deliver
- 7. Do not misrepresent your credentials, even by subtle implication
- 8. Do not lie to your client
- 9. Acknowledge your client as a sacred Unknown Other. If you prove trustworthy, this Unknown Other may reveal something of him/herself.
- 10. Allow yourself to be guided by a combination of your own deepest wisdom and the client's deepest wisdom – but giving priority to the indicators from your client's system.
