- Very fast & easy to set up
- Quality design & finish
- No infection control problems
- No health & safety issues
- Designed and built in the UK
- Parts available individually

A NEW 'ACTION RESEARCH ARM TEST' KIT - DESIGNED FOR THE MODERN PROFESSIONAL

Neuroquip's new, modernised 'Action Research Arm Test' (ARAT) Kit provides you with every component required to conduct a valid, reliable measure of arm motor status in accordance with established test protocols.

The full kit (including a shelf-table set at the correct height) is supplied complete within one waterproof holdall for safe, convenient storage and transportation. The bag also contains additional space for notes, other small equipment and personal possessions.

Internally, each component of the kit fits into a purpose-made slot for protection and clarity of identification. The table folds into a separate zipped compartment in the base of the bag.

A PROFESSIONAL KIT & A PROFESSIONAL IMAGE

For risk-assessment, the table has been made to the correct test height and fitted with non-slip feet, rendering the layering of books, wooden planks and other potentially hazardous and unsightly methods of obtaining the correct height a nuisance of the past.

All components meet relevant British & European standards. Wooden parts are coated with an advanced biocidal lacquer, effective in killing MRSA and C.diff.

ACTION RESEARCH ARM TEST KIT

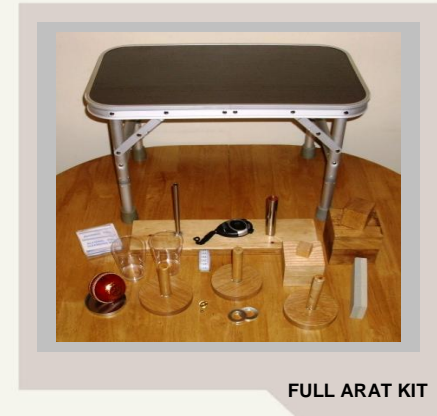

NEUROQUIP **ARAT** KIT CONTENTS
