My Lakes, Your Lakes...

Wisconsin's Public Trust Doctrine states that "the navigable waters shall be common highways and forever free..." This doctrine declares all waters to be a public resource. As citizens of the State, it is our right to enjoy these beautiful waters, AND it is our responsibility to protect them for future generations.

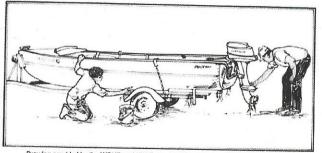

Take an active role in protecting the Waupaca Chain O' Lakes:

- Observe state and local boating ordinances for the safety of all.
- Clean your boat and equipment to prevent the spread of aquatic invasive species.
- Join a local "Clean Boats, Clean Waters" volunteer team to teach fellow boaters the steps for cleaning boats and equipment.

The Waupaca Chain O' Lakes is a unique resource. Aquatic invasive species are a specific threat to the lakes' overall health, and water health directly affects the local economy. Preserving lake health is a wise investment. Preventing the introduction of aquatic invasive species is far more cost effective than eradication. With the cooperation of all lake users, the Waupaca Chain O' Lakes will continue to be a wonderful place to enjoy.

You can help prevent the spread of aquatic invasive species and protect these beautiful lakes!

Aquatic Invasive Species Information

Aquatic invasive species spread aggressively and crowd out native plants, fish and wildlife, potentially devastating the health of lakes. The Waupaca Chain O' Lake District and Association are working hard to control three species identified in the Waupaca Chain O' Lakes: Purple Loosestrife, Curly Leaf Pondweed and Eurasian Water Milfoil.

Invasive plants and animals are spread from lake to lake by "hitch hiking" a ride on boats, trailers and equipment. Boaters can play a critical role in preventing the introduction of additional aquatic invasive species. Take time to inspect your boat for aquatic invasive species before entering and after leaving any water body.

Purple Loosestrife (Lythrum salicaria) is distinguished by its squared stem, whorled leaves and bright magenta flowers.

Zebra mussels, (Dreissena polymorpha) are tiny bivale mollusks, that range from approximately 1/64th of an inch to 2 inches. Zebra musseles inhabit fresh to brackish or even estuarine waters.

(Myriophyllum speicatum) is distinguished by its whorls of leaves with 12-21 pairs of leaflets. Compare the feather-like appearance of the Eurasian leaves (top right), to the Northern Water Milfoil leaves (bottom right), which have fewer pairs of leaflets.

BOAT-CHECK TIPS

- Never transfer water, plants, animals, or mud from one body of water to another.
- Inspect your boat, trailer, and equipment and remove plants, animals and mud before launching or transporting your boat.
- Drain water from your boat, motor, bilge, live well and bait containers before leaving the water access.
- Dispose of unwanted bait and aquatic plants in the trash.
- •Spray/rinse boats and equipment to remove microscopic invasives, OR dry boats and equipment for at least five days.

Wisconsin laws prohibit placing a boat or trailer with plants or zebra mussels attached into navigable waters.
