

ADR-JR

Portable Roadtube Counter

Portable Traffic Counter

Data Collection

The next generation of the world's most popular device, the ADR JR/RT traffic counter from Peek Traffic is a portable, self contained, battery operated vehicle counter consisting of a solid state air switch with a 16 x 2 character display and is powered by one six volt battery. The ADR-JR/RT is self contained in a weatherproof housing with a tamperproof latch and hinges.

Units come completely assembled and ready for immediate use, requiring only the connection of a road-tube to the air switch. The ADR-JR/RT is designed and proven for vehicle volume counts for city streets, driveways, shopping malls, national parks, secondary highways and drive-in or parking complexes – anywhere a basic low cost traffic survey is needed. Installation and operation are intuitive due to a straight forward menu design and a single road tube air switch.

The lightweight portable road tube-based ADR-JR/RT allows for counts of axles or cars [divide-by 2 (/2)]. During set-up, the fast/slow debounce function is set for the speed of traffic being recorded, ensuring the most accurate counts. The ADR-JR/RT offers a digital back-lit LCD display facilitating access to count statistics or set up information in dim lighting conditions.

Features

- Low cost vehicle counter
- Simple to set up and use
- Accurate data
- Digital back-lit LCD display
- Micro-based Solid state components
- Road tube operation
- Rugged, lightweight and portable
- Battery life up to five years
- User selectable study period
- Half day, one day, 2 day, seven day (No stop continuous)
