

# 3. Social structure: population of the village

For the Neighbourhood Plan we need an accurate snapshot of the village residents: population; household composition and type; how people use the village and what do they want for the future

WOTG has:

- a higher proportion of 65+ residents than district or county regions
- a higher proportion of 65+ residents than neighbouring villages (Bletchington and Kirtlington)
- generally lower numbers of children than neighbouring villages.
- more than half of households with children have 2 or more children

The population of the village has increased by only 15% in the last 60 years, but the number of households has increased 110%:

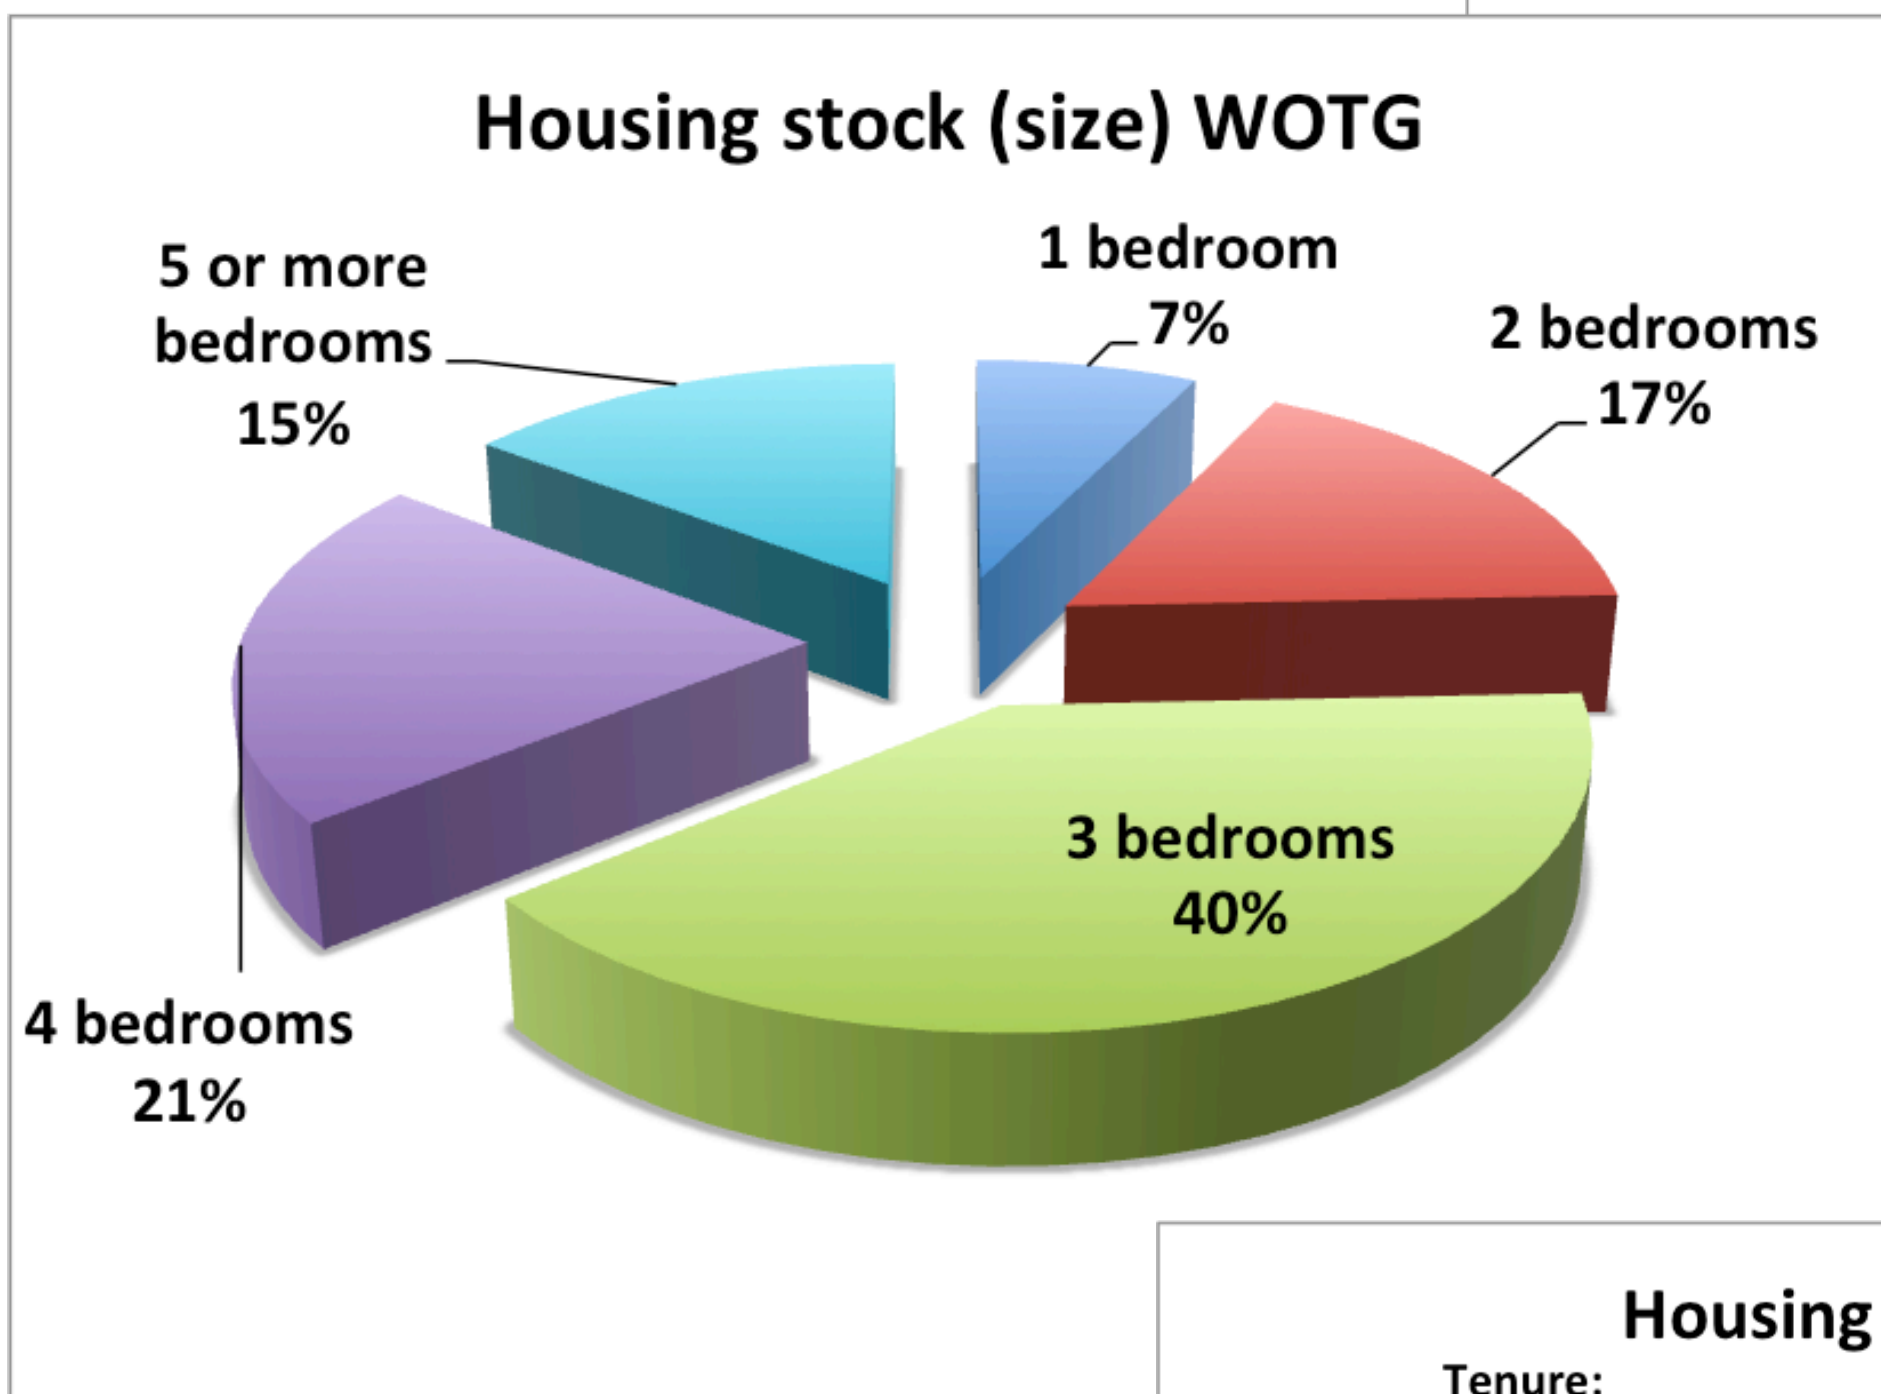

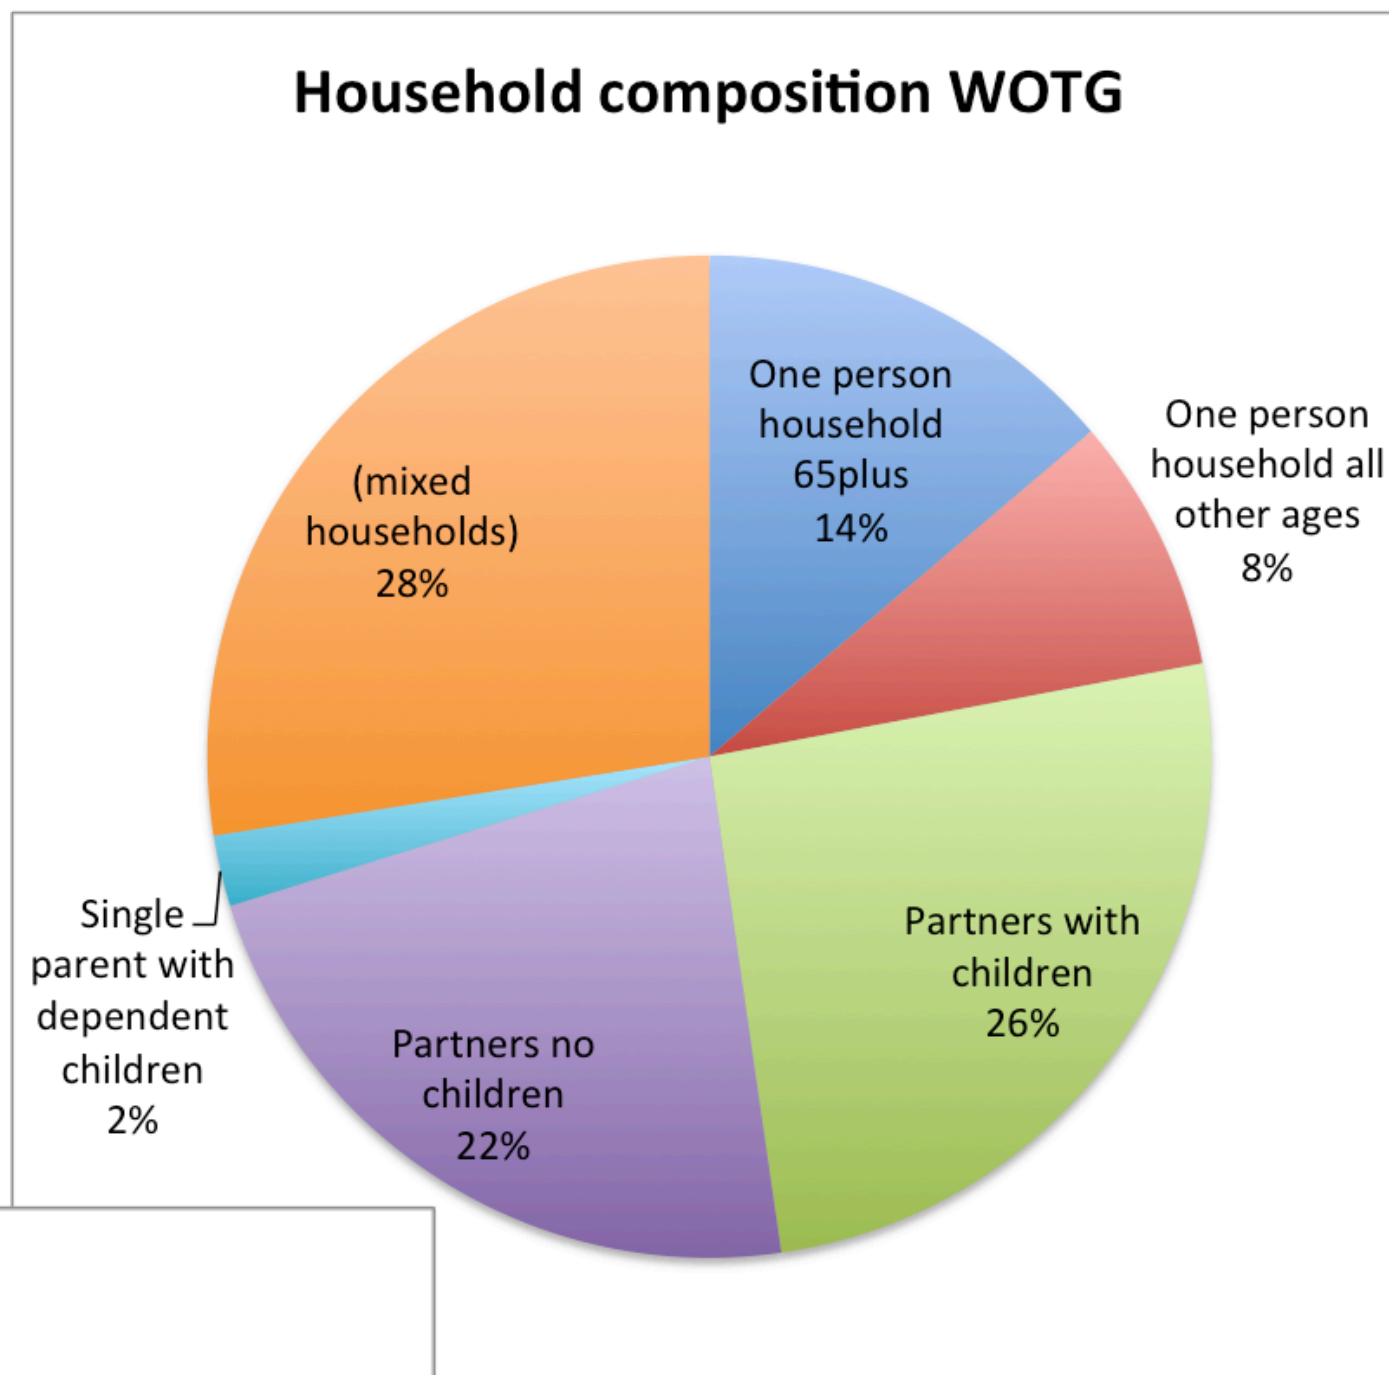

- there are more houses with fewer residents living per household

This panel shows the most recent village population (taken from the census 2011 figures)

# 4. Social structure: households

22% of households in the village have single occupants

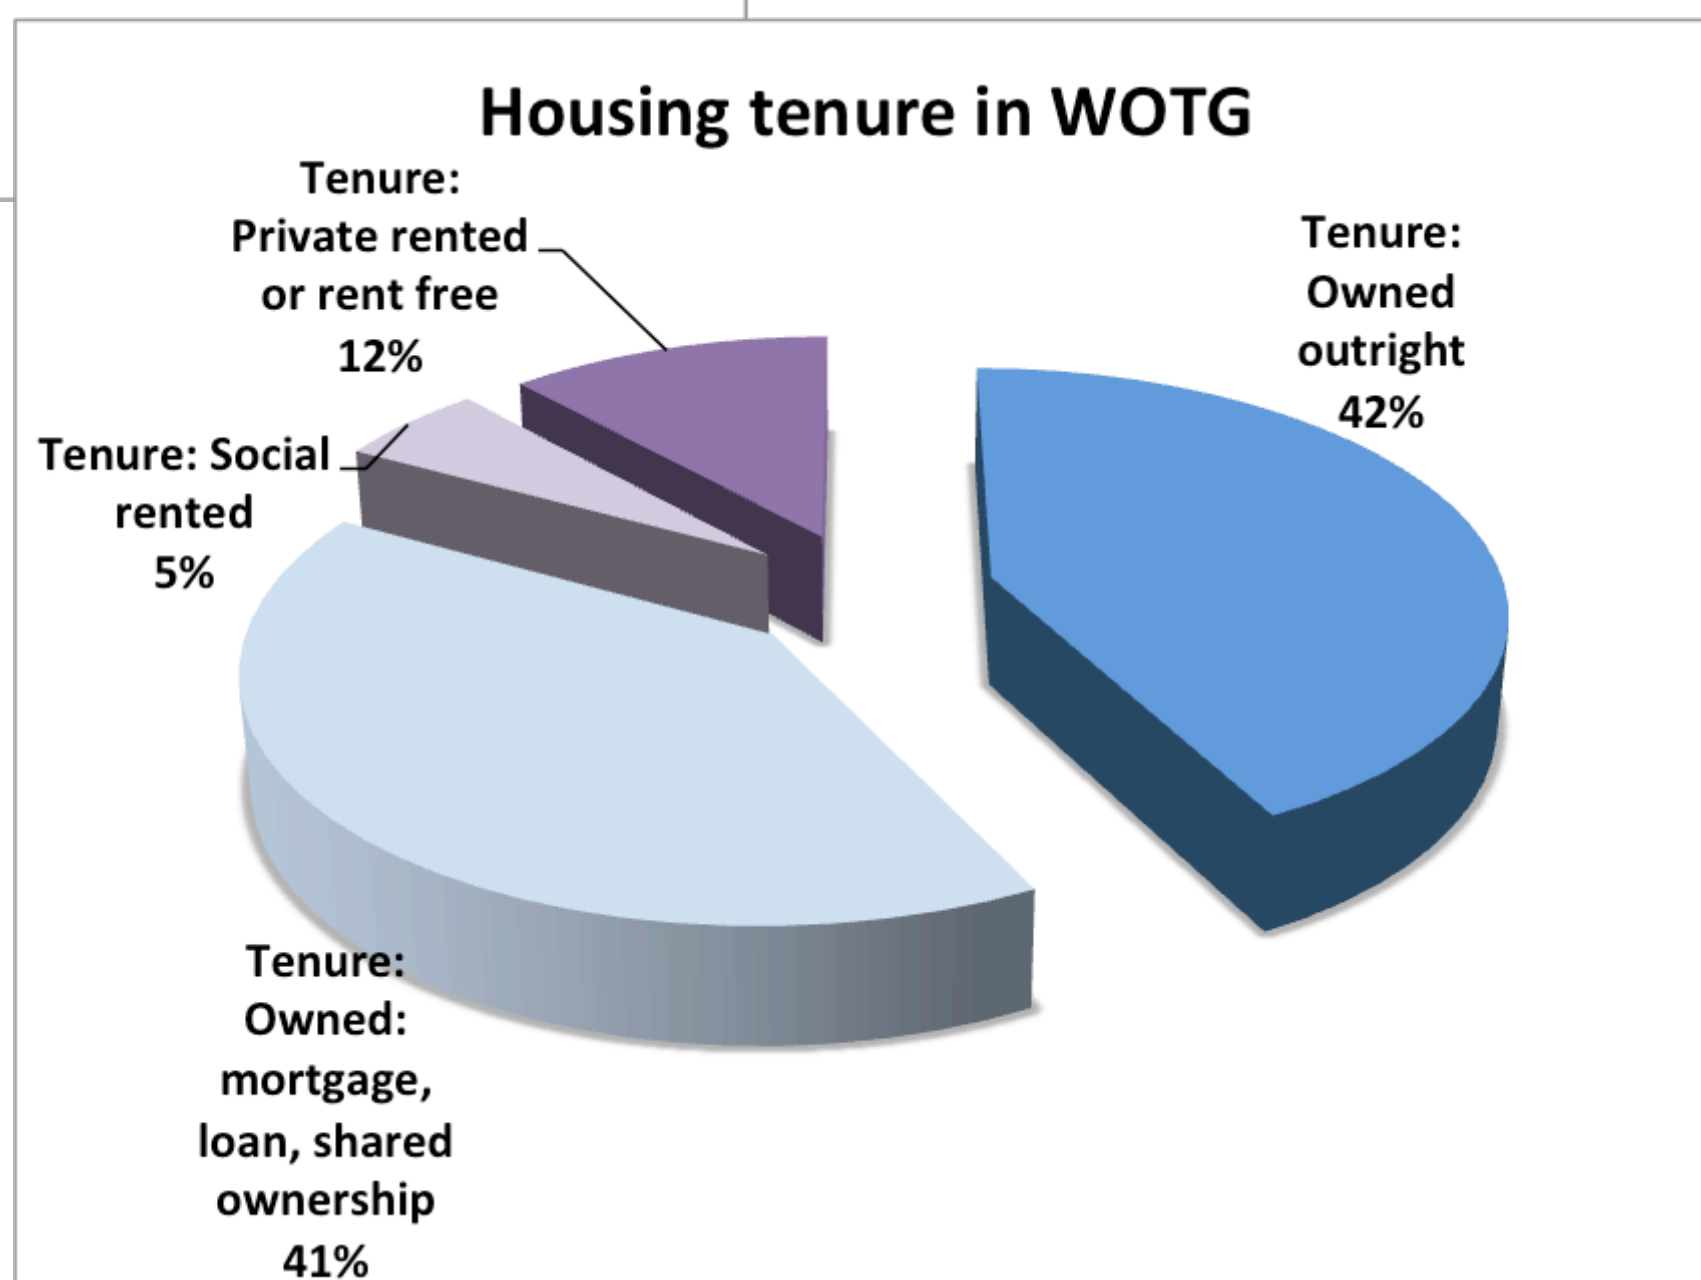

→ Of those, 64% are 65+

76% of houses in the village have more than 2 bedrooms

83% of houses in the village are owner occupied

Only 17% of properties are available for rent

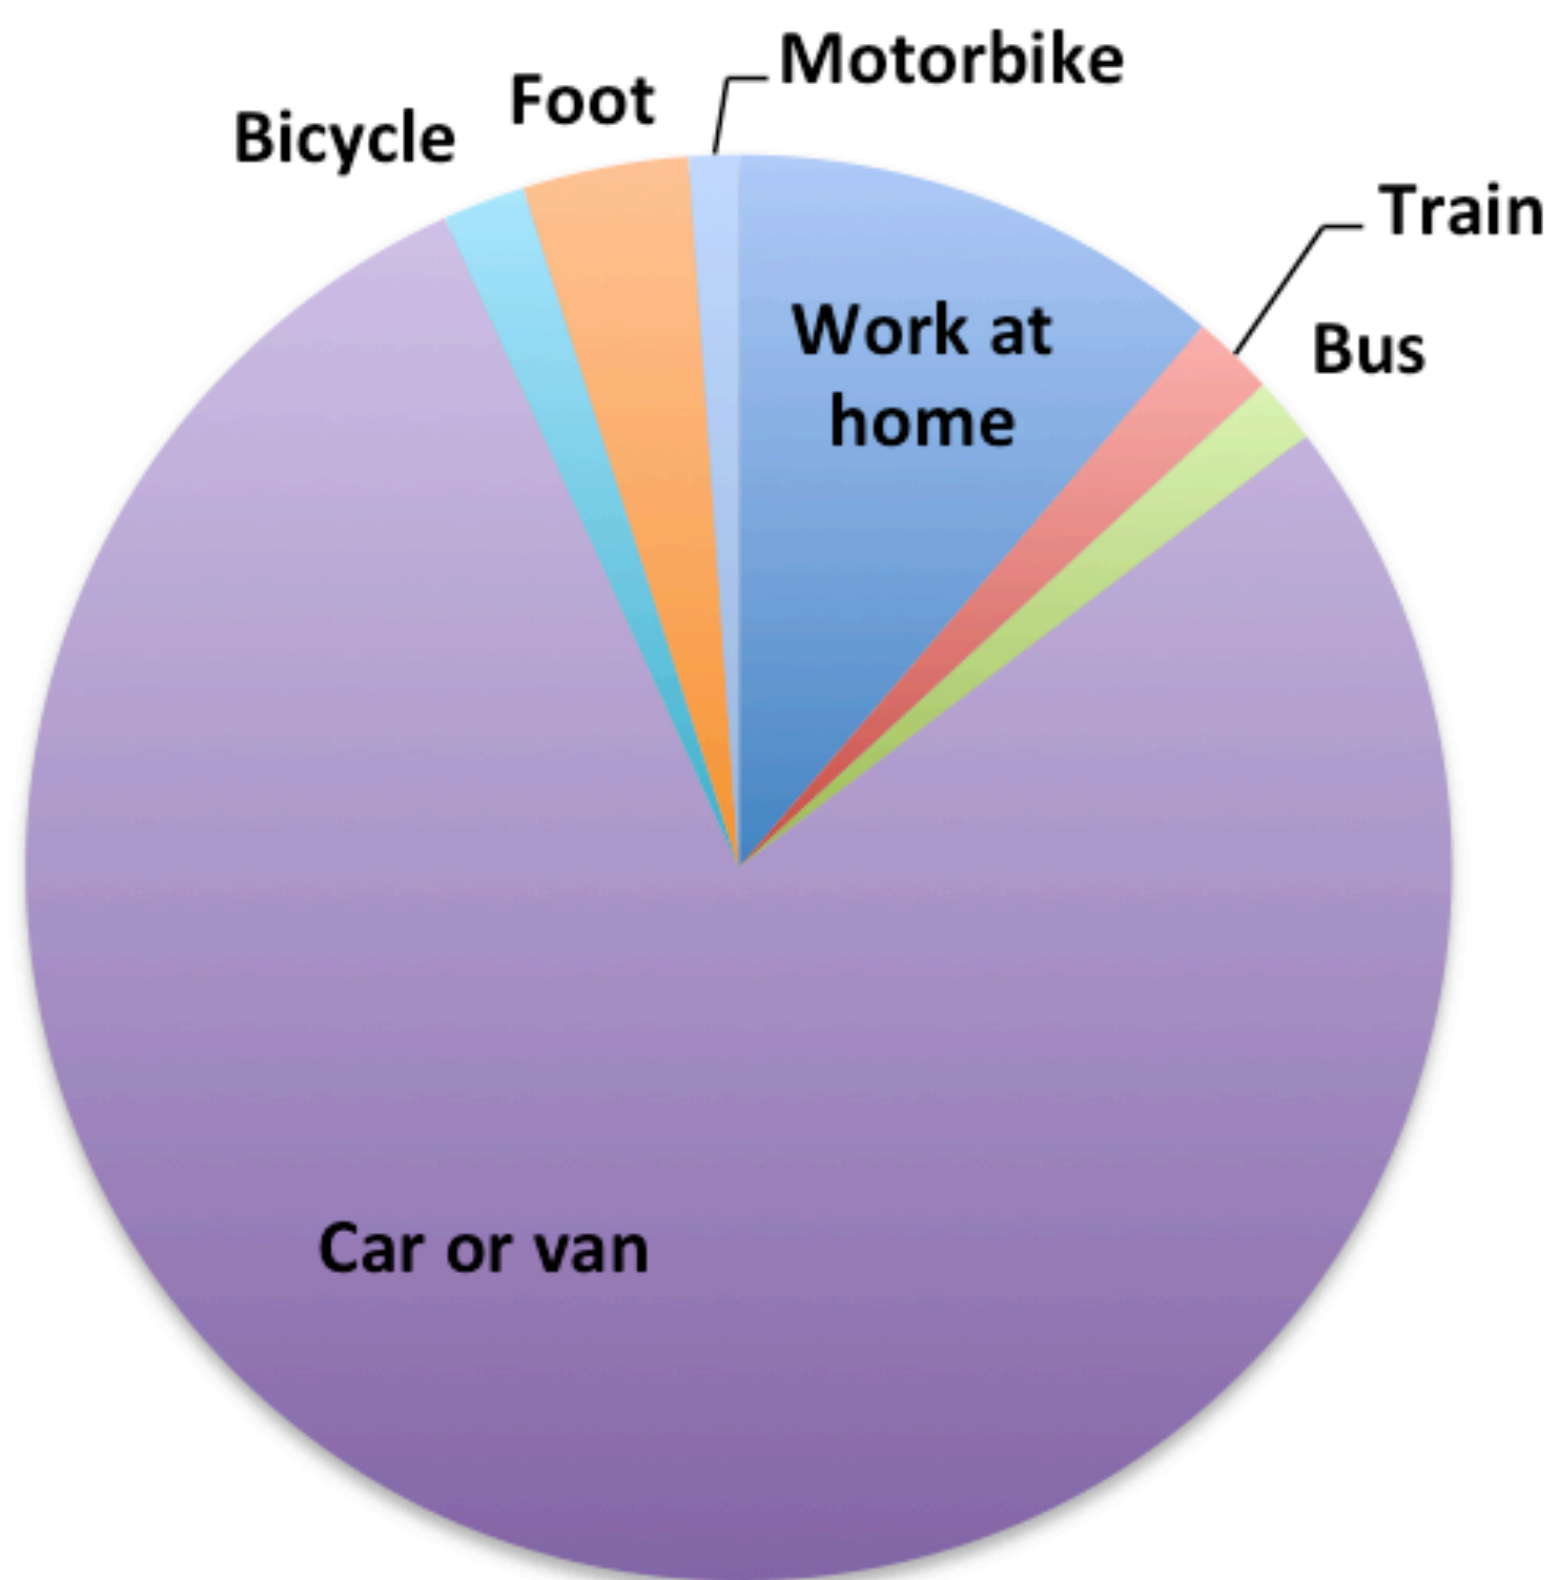

This panel shows the household composition in the village (2011 census figures)

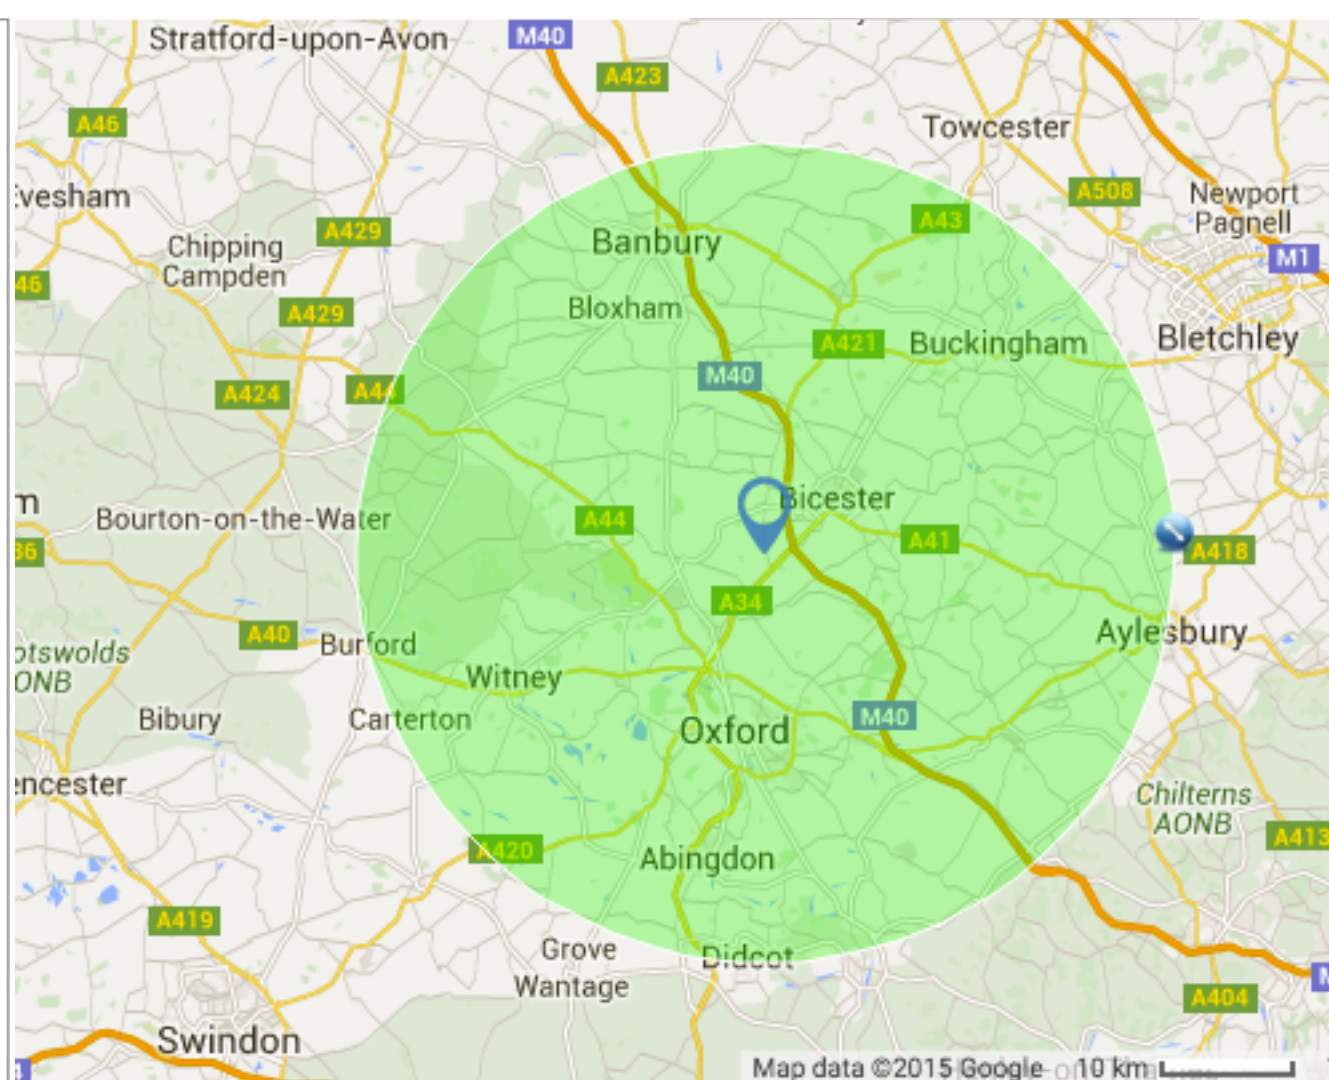

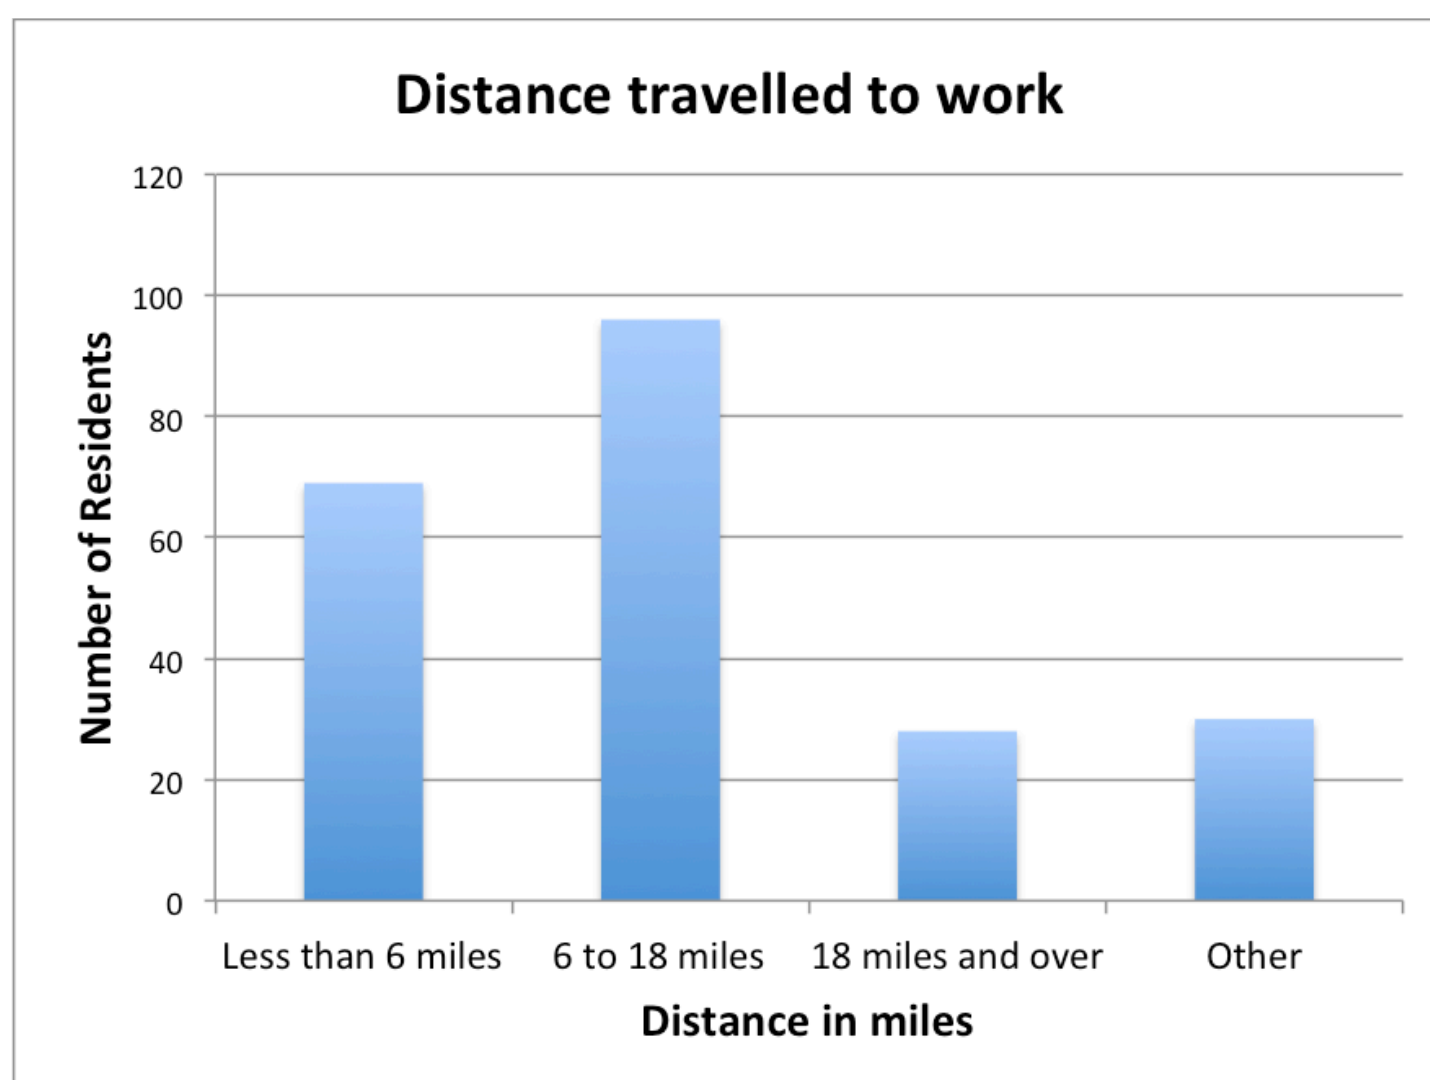

## 5. Social structure: mode of transport to work

### Mode of transport to work (111 employed residents; 16-74 age group)

79% of workers in the village use car transport to commute to their place of work

11% work from home

43% of commuters travel between 6 and 18 miles from the village – which extends to Oxford, Banbury, Aylesbury, Buckingham, Witney and Harwell.

This panel shows the commuting statistics for workers in the village (2011 census figures)
