Case Study 006

Case Study for:
Compton Verney Chapel, Stratford Upon Avon – Building Survey

Figure 1- Original Interior

Compton Verney Chapel, is on the site of Compton Verney House which is open to the public as an art gallery.

The Chapel is Grade II* being designed by the garden designer ‘Capability’ Brown whilst he was designing the garden for the main house. The chapel was required due to the demolition of the church to allow his full garden design to be executed.

A full building survey was required to allow the Trust to apply for Heritage Lottery Funding (HLF) for the full restoration and refurbishment of this much-neglected

building. Since the survey in June 2009, the Trust have secured a HLF grant, and the building has been restored.
