

Sundar

S.T.E.A.M. Academy

Strengthen your child's skills while having fun in Science, Technology, Engineering, Arts and Mathematics at a STEAM Academy near you. Students in grades 5-8 will have a unique hands-on experience conducted under the guidance of professionals with extensive experience in STEAM. The project-based learning sessions will deepen the students conceptual understanding of math and their problem-solving abilities in all subject areas. The student will receive individualized coaching and support as needed. The sessions will include tips and techniques on note taking, study skills and time management. The students who attend the session regularly, can expect their math and science grades to increase by at least one letter grade.

Viji K. Sundar, PhD

27 years of leading Academic Programs
