

HOW TO DRAW AN IMPOSSIBLE SHAPE

Impossible shapes can be drawn. They just can't be created in three dimensions. Here's how to draw an impossible shape:

1. Draw a square.
2. Extend a line off of each corner.
3. Draw another line off each of those extensions that extends a bit over the corners.
4. At the end of each line, draw a short, 45-degree angle.
5. Connect the lines, and you'll have an impossible shape. Try it with a triangle!
