**RE: Flanagan South Pipeline Project Open House for Restricted Landowners**

Dear Ms. Jones,

As you may already know, Enbridge Pipelines (FSP) L.L.C. ("Enbridge") is proposing to construct a pipeline system in your area through a project known as the Flanagan South Pipeline Project ("Project"). The Project will provide additional capacity needed to bring increased North American crude oil production to refinery hubs in the Gulf Coast region.

Enbridge is hosting an open house for owners with restricted interests in land in which Enbridge seeks to obtain right-of-way. The open house will be informal and owners may attend at any point during the hours of 5:30 – 7:30 p.m. Enbridge representatives will be on hand to discuss construction plans and answer your questions.

**Date:** Thursday, May 23<sup>rd</sup>  
**Time:** 5:30 – 7:30 p.m.  
**Location:** The Business Center  
1225 Virginia Street  
Pawhuska, OK 74056

The pipeline will generally be located adjacent to Enbridge's Spearhead System pipeline and will originate in Pontiac, Ill. (Flanagan Terminal) and terminate in Cushing, Okla. Subject to final agreements with customers and regulatory approvals, construction of the Project will begin in mid-2013 and be completed in mid-2014. Because the Project optimizes Enbridge's pipeline infrastructure, the need for new pipeline routes is minimized.

Although the Project will generally follow the right-of-way of Enbridge's Spearhead System, some route deviations were necessary to avoid congested areas or other constraints. The last year of Project planning has provided important feedback regarding landowner, environmental,

community, and other issues as we strive to confirm the most appropriate route to meet the energy needs of the region while minimizing community and environmental impacts to the extent practical.

With regard to the Osage restricted lands, Enbridge representatives have been working with the Bureau of Indian Affairs Osage Agency ("Agency") since early 2012 to take the appropriate steps to obtain easement interests in the restricted properties along the Project route. In particular, Enbridge has worked with the Agency to obtain consent from restricted landowners to complete environmental and civil surveys on the restricted properties. Those surveys have been completed, and appraisals valuing the easements sought by Enbridge have been submitted to the Agency. It is anticipated that the Agency will be contacting restricted landowners soon to provide information regarding these appraisals and to convey Enbridge's offer for the easements Enbridge is seeking.

We anticipate beginning construction in your community in September 2013. We encourage you to visit our website at [www.enbridge.com/flanagansouthpipeline](http://www.enbridge.com/flanagansouthpipeline) for Project updates. You may also contact me anytime at (218) 623-7566. More information about Enbridge is available at [www.enbridgeus.com](http://www.enbridgeus.com).

We look forward to seeing you at the open house.

Sincerely,

A handwritten signature in cursive script, appearing to read "Ronald P. Fuchs".
