

LuminaCloud™
Acid-etched translucent glass
Interior & exterior use
Diffuses natural light

LuminaCloud™

An acid-etched glass with a tactile, satin finish, LuminaCloud™ provides a high degree of both opacity and light transmission, making it ideal for screening solutions where superior and sophisticated aesthetics are equally imperative.

Suitable for safety glass applications when toughened or laminated to the relevant standards, LuminaCloud™ can also be combined with energy efficient products in a double glazed unit for added benefit.

Privacy and connection.

By allowing light into a space while shielding it from outside observation, LuminaCloud™ enables the creation of private areas that are both connected and independent of their immediate surrounds.

The three options in the LuminaCloud™ range, Clear, SuperClear and Grey, each offer differing levels of opacity and illumination. Grey – which transmits 42% of visible light – is the most opaque, Clear transmits 84% visible light and SuperClear transmits an extraordinary 91%, yet still provides a high degree of visual obscurity.

The images shown are a representation only of the product. Colour and effect may differ. Always refer to a sample to determine if product is appropriate for your requirements.

An illuminating idea.

The uniformly matte texture of LuminaCloud™ diffuses even the harshest natural light into a beautifully even illumination – a characteristic that makes it ideal for roof lighting.

As its transparency increases when wet, LuminaCloud™ also allows you to use glazing as a dynamic lighting element; one that varies with the weather, for example, in the case of exterior glazing.

A touch of class.

The visual and tactile qualities of LuminaCloud™ possess a contemporary sensibility; its soft, richly textured lustre is the perfect complement to an urbane interior or modernist exterior.

Smart as well as good looking, the acid-etched LuminaCloud™ surface is also scratch and fingermark resistant, making it an attractive proposition in every sense.

Wherever privacy beckons.

Once you appreciate the properties of LuminaCloud™, its uses become obvious: office partitioning, windows and facade, balustrades, doors, kitchen splashbacks, shower and bath enclosures – the list of possible privacy applications is as long as it is varied.

But don't overlook its potential as a purely decorative element. LuminaCloud™ is equally suited to creating a dramatic feature wall, for example, or adding a sophisticated touch to kitchen cupboards, furniture or shelving.

When toughened or laminated to the relevant standards, LuminaCloud™ is a Grade A Safety Glass and thus suitable for internal and external applications.
