

GUARANTEED PRODUCT DELIVERY

How iVend® works

During the first vend cycle, if a selected product is not detected by the beams of the iVend® system, the system waits one second then initiates a second vend cycle and rotates the helix until the product is delivered.

If a product still has not been detected by the iVend® system after a full rotation to the home position, the selection will be considered empty or sold out. The customer's credit will be restored and will allow another selection to be made. The selection is then automatically reinstated for future vends.

**FEWER MISSED VENDS.
MORE HAPPY CUSTOMERS!**

Features:

- Improves vending reliability
- Reduces service calls
- Tracks number of iVend® assisted vends
- Minimizes the vending of a "bonus" product
- Identify improper loading or spiral choice
- Re-establishes credit or refunds money
- Consistent home position
- Sensor self calibration
- Sensor fail safe operation

Can & Bottle Vendor Drop Sensing Technology

Perfect Break Systems drink vending machines are equipped with the latest drop sensing technology.

Benefits

- Guarantees another selection or your money back
- Cuts down on service calls due to mis-vends
- Keeps customers from tipping the machine in frustration
- Increased customer satisfaction
