The Effects of STRESS on your Body

ANDERSON COUNSELING & EDUCATION

SKIN: pales as blood diverted to vital organs.

HEART: begins to pound, sending blood around body carrying sugar (energy) and hormones (eg. adrenalin)

SKIN: less blood supply can lead to diseases developing.

HEART: racing heartbeat and high blood pressure can lead to strokes or heart attacks.

PRIMARY STRESS RESPONSE

IMMEDIATE & URGENT RESPONSE to SERIOUS THREAT

MUSCLES: tense in readiness for action.

LUNGS: air passage dilates, breathing more intense to provide more oxygen to feed increase blood supply.

LIVER: glycogen converted to blood sugar to give 'short distance' energy.

DIGESTION: processes shut down

Mouth goes dry to avoid adding

as blood diverted elsewhere.

extra fluids to stomach.

BLOOD: thickens to help it carry more oxygen, fight infection & stop bleeding

SWEAT GLANDS: start up to cool the underlying and overheated muscles.

BLADDER & RECTUM:

Muscles relax to release any excess load.

MUSCLES: ongoing tension leads to aches & pains, even muscle strain.

can lead to blackouts and upset heart rhythms.

LIVER: body's own fats and proteins broken down and released to provide further energy.

SECONDARY STRESS RESPONSE ONGOING RESPONSE to UNDEALT WITH STRESS

BLOOD: heart works harder due to thickened blood.

CHOLESTEROL: high cholesterol in blood can cause hardening of the arteries.

DIGESTION: shutdown can lead to stomach problems, particularly if you eat on the run. Increase in acidity can contribute to stomach ulcers.

WARNING SIGNS:

Below are some of the messages our bodies send to tell us we're stressed.

PHYSICAL

- Muscle tension/headaches
- Sleep disturbance/tiredness
- Increased 'breakouts'
- Rapid pulse
- Nausea
- Indigestion
- Increased Sweating
- Flushing (face feeling hot)Prolonged/Frequent headaches
- Susceptibility to mild illness
- 5: : /5 : .
