

Health Care Policy

(From P. 10/11 of the CDC's Family Handbook. Please refer to the Handbook for further information)

PLAN FOR MANAGING INFECTIOUS DISEASE

Staff will take extra special precautions when children who are ill are diagnosed at the Center and when children who are mildly ill remain at the Center.

Children who exhibit symptoms of the following types of infectious diseases, such as gastro-intestinal, respiratory and skin or direct contact infections, may be excluded from the Center if it is determined that any of the following exist:

- the illness prevents the child from participating in the program activities or from resting comfortably;
- the illness results in greater care need that the child care staff can provide without compromising the health and safety of the other children;
- the child has any of the following conditions: fever, unusual lethargy, irritability, persistent crying, difficult breathing, or other signs of serious illness;
- diarrhea;
- vomiting two or more times in the previous 24 hours at home or once at the center;
- mouth sores, unless the physician states that the child is non-infectious;
- rash with a fever or behavior change until the physician has determined that the illness is not a communicable disease;
- purulent conjunctivitis (defined as pink or red conductive with white or yellow discharge, often with matted eyelids) until examined by a physician and approved for re-admission, with or without treatment;
- tuberculosis, until the child is non-infectious;
- impetigo, until 24 hours after treatment has started or all the sores are covered;
- head lice, free of all nits or scabies and free of all mites;
- strep infection, until 24 hours after treatment and the child has been without fever for 24 hours;
- many types of hepatitis are caused by viruses. The symptoms are so alike that blood tests are needed to tell them apart. In the U.S. the most common types of hepatitis are A, B, and C. Types B and C are spread through blood and other body fluids. Type A, is spread through contaminated food and water or stool (feces). Fact sheets are available from the state Department of Public health.

The Center for the Development of Children

4 Springdale Ave.
Dover, MA 02030

Diana E. Workman, Director

(508)785-1835

- chicken pox, until last blister has healed over.

A child who has been excluded from child care may return after being evaluated by a physician, physician's assistant or nurse practitioner, and it has been determined that he/she is considered to pose no serious health risk to him or her or to the other children. Nevertheless, the center may make the final decision concerning the inclusion or exclusion of the child.

If a child has already been admitted to the Center and shows signs of illness (for example: a fever equal to or greater than 100.4 degrees by the oral or auxiliary route, a rash, reduced activity level, diarrhea, etc.), he/she will be offered their mat, cot, or other comfortable spot in which to lie down. If the child manifests any of the symptoms requiring exclusion (as listed above) or it is determined that it is in the best interests of the child that he/she be taken home, his/her parent will be contacted immediately and asked to pick the child up as soon as possible.
