

4 reasons to lab test your water

● Lead contamination

Just an inch of old plumbing causes long-term brain damage, especially in children (EPA).

● Arsenic is tasteless

20% of untreated drinking water in the USA contains cancer-causing arsenic (USGS).

● Hidden maintenance

Your biggest investment might come with a \$20,000 headache: water hardness.

● Know before you buy

Children are especially vulnerable to contaminants in water, and they deserve the best.

TAP SCORE
Know what's in your tap water.

Advanced Analytical Laboratories

Specialized For Home Health Testing

Tap Score by SimpleWater is the leading option for fast and dependable home health testing.

Our EPA award-winning firm provides cutting-edge health analysis and lab testing to homes and businesses nationwide.
