The Revised Oswestry Disability Index (for low back pain/dysfunction)

Pa	tient name:	_ Fil	e #	Date:	
Thi	s questionnaire has been designed to give the doctor information as t Please answer every section and mark in each section only the ONE he statements in any one section relate to you, but please just mark the	box th	at app	ack pain has affected your ability to manage everyday lies to you. We realize that you may consider that two	
SECTION 1-PAIN INTENSITY			SECTION 6-STANDING		
	The pain comes and goes and is very mild. The pain is mild and does not vary much. The pain comes and goes and is moderate. The pain is moderate and does not vary much. The pain comes and goes and is very severe. The pain is severe and does not vary much.		I have with ti I cannot increase	tand as long as I want without pain. some pain on standing, but it does not increase me. ot stand for longer than one hour without ing pain. ot stand for longer than 1/2 hour without	
SECTION 2-PERSONAL CARE			I cann	ing pain. ot stand for longer than 10 minutes without ing pain.	
	I would not have to change my way of washing or dressing in order to avoid pain.			standing because it increases the pain right	
	I do not normally change my way of washing or dressing even though it causes some pain. Washing and dressing increases the pain, but I manage not to	SEC	TION	7-SLEEPING	
	change my way of doing it. Washing and dressing increases the pain and I find it necessary to change my way of doing it.		I get pa	o pain in bed. ain in bed, but it does not prevent me from g well.	
	Because of the pain, I am unable to do some washing and dressing without help. Because of the pain, I am unable to do any washing and dressing		by less Becaus	se of pain, my normal night's sleep is reduced than 1/4. se of pain, my normal night's sleep is reduced than 1/2.	
without help. SECTION 3-LIFTING			Because by less	than 1/2. se of pain, my normal night's sleep is reduced than 3/4. revents me from sleeping at all.	
	I can lift heavy weights without extra pain. I can lift heavy weights, but it causes extra pain. Pain prevents me from lifting heavy weights off the floor, but I manage if they are conveniently positioned (e.g., on a table). Pain prevents me from lifting heavy weights off the floor. Pain prevents me from lifting heavy weights, but I can manage light to medium weights if they are conveniently positioned. I can only lift very light weights at the most.	SEC	My soo My soo pain. Pain h from l	8-SOCIAL LIFE cial life is normal and gives me no pain. cial life is normal, but increases the degree of as no significant effect on my social life apart miting my more energetic interests, e.g.,	
SECTION 4-WALKING			dancin Pain h verv o	as restricted my social life and I do not go out	
	I have no pain on walking. I have some pain on walking, but it does not increase with distance. I cannot walk more than one mile without increasing pain. I cannot walk more than 1/2 mile without increasing pain. I cannot walk more than 1/4 mile without increasing pain.	SEC	I have TION	as restricted my social life to my home. hardly any social life because of the pain. 9-TRAVELLING	
SEC	I cannot walk at all without increasing pain. CTION 5-SITTING		I get so forms	o pain while travelling. ome pain while travelling, but none of my usual of travel makes it any worse.	
	I can sit in any chair as long as I like. I can only sit in my favorite chair as long as I like. Pain prevents me from sitting more than one hour. Pain prevents me from sitting more than 1/2 hour. Pain prevents me from sitting more 10 minutes. I avoid sitting because it increases pain right away.		me to I get e seek a Pain re	Attra pain while travelling, but it does not compel seek alternative forms of travel. Attra pain while travelling, which compels me to ternative forms of travel. Estricts all forms of travel. Revents all forms of travel except that done lying	
		SEC	TION	10-CHANGING DEGREE OF PAIN	
			My pa My pa is slow My pa My pa	in is rapidly getting better. in fluctuates, but is definitively getting better. in seems to be getting better, but improvement at present. in is neither getting better nor worse. in is gradually worsening. in is rapidly worsening.	

Instructions:

- 1. This is a self-report questionnaire: the patient is instructed to fill it out.
- 2. The patient follows the general instructions given at the top of the questionnaire.
- 3. Each section must be completed. If the patient leaves one blank, instruct them to complete the form. It must be completed in one sitting.
- 4. Each section has 6 possible answers. Statement 1 is graded as 0 points; statement 6 is graded as 5 points. A total score of 50 is thus possible and would indicate 100% disability. So, for example, a total score of 10 of a possible 50 would constitute a 20% disability.
- 5. The following interpretation of disability scores is excerpted from the developers of the Oswestry system (457):

0%-20%: Minimal disability

This group can cope with most living activities. Usually no treatment is indicated, apart from advice on lifting, sitting posture, physical fitness, and diet. In this group some patients have particular difficulty with sitting, and this may be important if their occupation is sedentary, e.g., a typist or lorry [truck] driver.

20%-40% Moderate disability

This group experiences more pain and problems with sitting, lifting, and standing. Travel and social life are more difficult and they may well be off work. Personal care, sexual activity*, and sleeping are not grossly affected, and the back condition can usually be managed by conservative means.

40%-60%: Severe disability

Pain remains the main problem in this group of patients, but travel, personal care, social life, sexual activity*, and sleep are also affected. These patients require detailed investigation.

60%-80%: Crippled

Back pain impinges on all aspects of these patients' lives-both at home and at work-and positive intervention is required.

80%-100%

These patients are either bed-bound or exaggerating their symptoms. This can be evaluated by careful observation of the patient during medical examination.

- 6. It is recommended that clinicians focus their discussions of the results with patients in positive terms, rather than reporting disability scores. For example, point out the 10% improvement on a subsequent test.
- * Note: in the revised Oswestry, sex life questions were replaced with recreation questions.
