Tetrad Guide: TR23 D

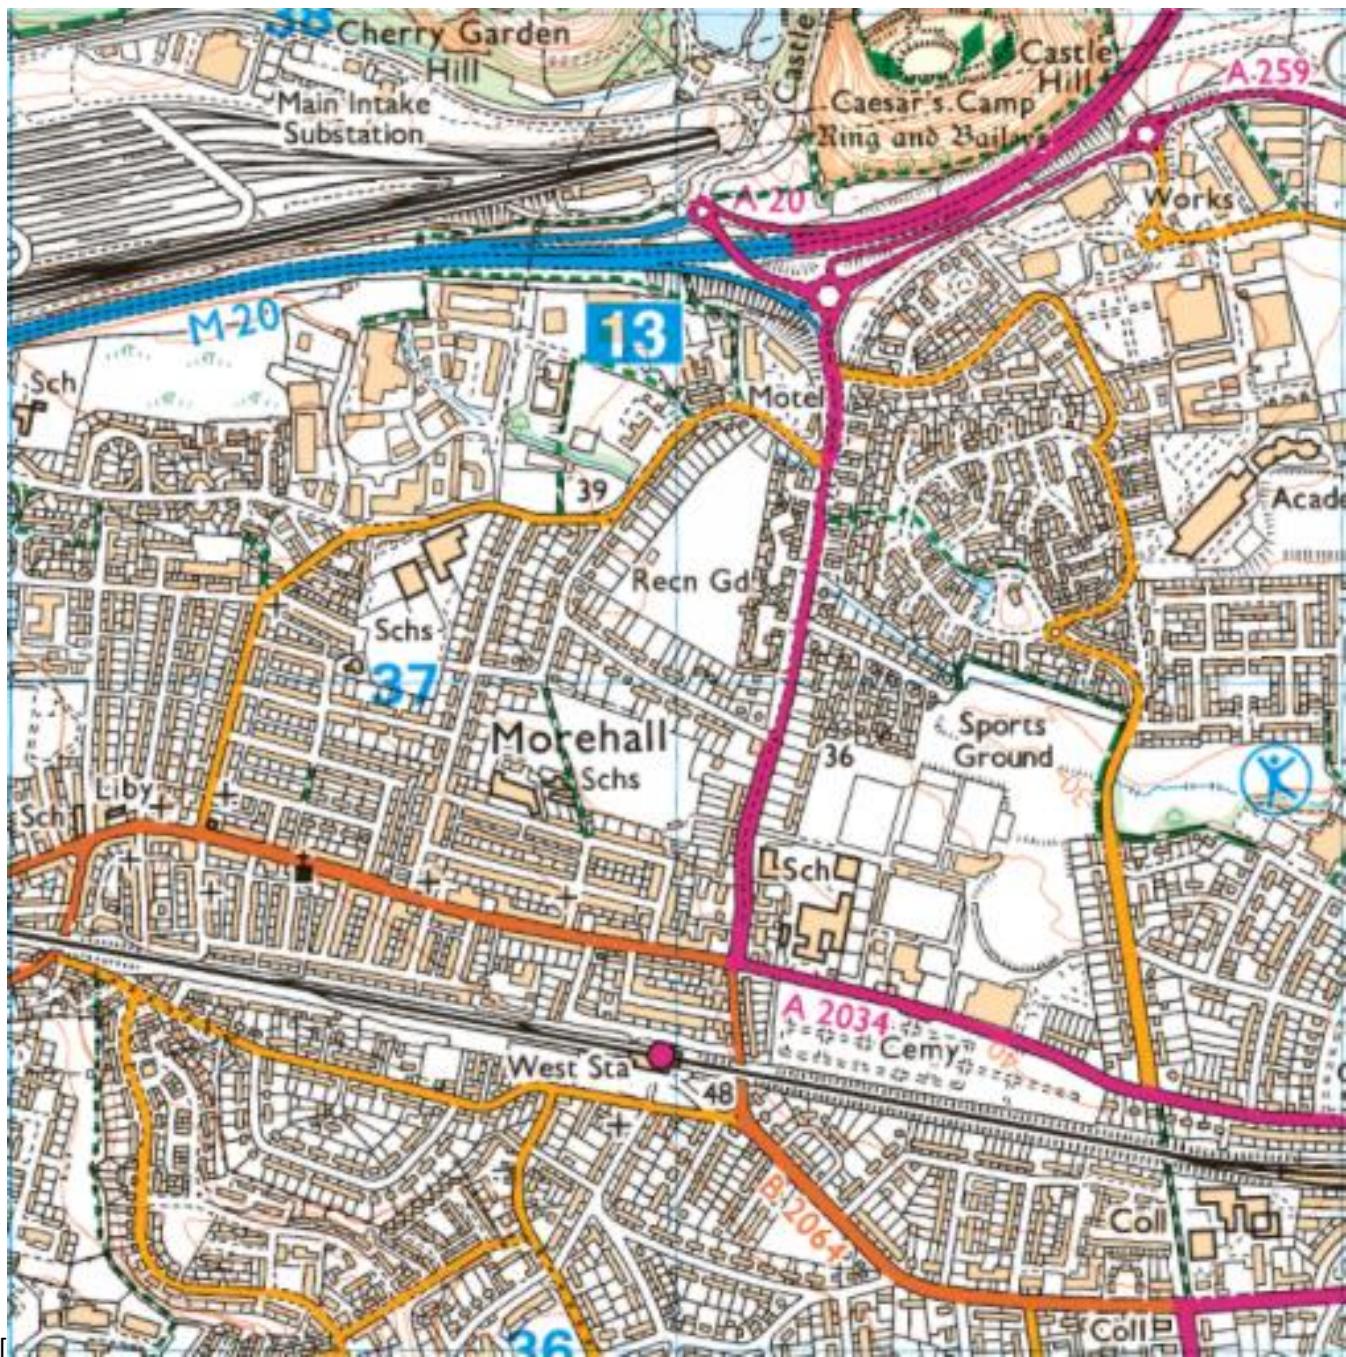

(Cheriton East, Folkestone West and Castle Hill)

Introduction

The tetrad TR23 D is dominated by residential developments and contains much of Cheriton town which now merges into western Folkestone. One of the sources of the Pent Stream is a spring between Cherry Garden Hill and Castle Hill and the stream flows south-east through the tetrad, passing through the Shearway Business Park, the "Polo Ground" sports field and the golf course at Folkestone Sports Centre. Separated from the rest of the tetrad by the eastern extent of the Channel Tunnel terminal and the M20/A20 road, are Castle Hill, the southern half of the Cherry Garden reservoirs and the scarp slope of Cherry Garden Hill, part of the Folkestone to Etchinghill Escarpment SSSI.

Habitats and birds

The name Cheriton derives from the Old English words 'Cirice tun' meaning church farm or church farmstead, and this tetrad was certainly a much more rural area until fairly recent times, with significant areas of interesting habitat having been lost.

A golf course formerly situated in the north-east of the tetrad had produced a few interesting records, including a Great Grey Shrike seen by Miss Rowland in October 1952 and an Ortolan Bunting found by Paul Howe in May 1972, before it was replaced by housing developments in the 1970s and 1980s that became the Lynwood and Broadmead Village areas, with the only trace of the course now remaining as a reference in the road names such as Linksway and Fairway Avenue.

Another victim of construction works was the former Biggin's Wood, of which only a tiny fragment remains, near to Biggins Wood Road. Biggin's Wood was regularly watched by Peter Wells in the 1970s and 1980s. The building of the M20 in 1981 removed a clay pit that occasionally attracted Common and Green Sandpipers and works on the Channel Tunnel terminal from 1988 cleared the remaining area. Water Rail, Woodcock, Snipe and Merlin were formerly described as regular, whilst up to eight pairs of Sedge Warbler nested in the damper areas and there were single records of Jack Snipe and Nightingale.

The residential areas and the Park Farm Industrial Estate support a significant Herring Gull population, with at least 183 pairs counted in a survey in 2019. The industrial estate population has been counted in every year since and has increased from 53 pairs during the 2019 survey to 75 pairs in 2022. A pair of Lesser Black-backed Gulls bred in 2021, with two pairs in 2022.

Gardens within the towns also provide a valuable habitat for breeding, wintering and passage birds. Cold weather has brought in Snipe and Woodcock, whilst Waxwings have occurred in some years (with a particularly large influx in 1996 when a peak of 79 were counted near Cheriton High Street). Long-eared Owl, Yellow-browed Warbler, Wheatear, Redstart and Black Redstart have also been noted on migration, though a Laughing Dove in a garden in Biggins Wood Road in July 2005 was almost certainly an escapee.

Dale Gibson worked in Cheriton between 1992 and 2003 and recorded an impressive array of raptors passing overhead, including a Rough-legged Buzzard, a Goshawk, two Black Kites, two Montagu's Harriers, at least 25 Honey Buzzards and numerous Ospreys, Red Kites and more regular species. A further Black Kite occurred in 2019. Other notable sightings included a Great White Pelican (in January 1996), an Alpine Swift (in September 1993), a Glaucous Gull, a Little Gull, a Short-eared Owl and two White Storks.

Ring-necked Parakeets have been recorded flying over Cheriton on several occasions and other flyovers have included Bewick's Swan, White-fronted Goose, Black Stork, Hoopoe and Serin.

Where the Pent Stream passes through the Shearway Business Park there are some remnants of scrub and open ground, which has attracted a range of common migrants with a few more notable species including Reed Warbler, Garden Warbler, Wryneck and Twite. This area though is also now being developed. Just before the stream leaves the tetrad it passes through a small golf course near Folkestone Sports Centre and this section sometimes holds Kingfisher, Little Egret and Siskin.

Many of the open grassy areas in the Folkestone area are frequented by Mediterranean Gulls and the sports ground (known locally as the “Polo Ground”) to the east of Cherry Garden Avenue has been a regular haunt since at least the mid-1980s, with counts often exceeding 50 (which at the time were significant totals), although numbers were higher before some of the area was converted into artificial grass pitches.

Castle Hill provides a fine vantage point overlooking the town and coast and could prove to be a good spot from which to observe visual migration. Limited watching to date has recorded movements of Stock Doves, Wood Pigeons, Redwings, Fieldfares, Meadow Pipits, Goldfinches, Siskins and Redpolls. Scrub around the base of the hill regularly attracts Firecrests, Bullfinches, Yellowhammer and other downland and woodland species, whilst a Corncrake flew over the A20 here in 2021.

Access and parking

There is free parking throughout most of the tetrad. Cheriton has a rail station (Folkestone West) and is on several bus routes. It is possible to access Castle Hill from the bottom of the hill by taking the first left turn off the roundabout after leaving the M20 at junction 13 and parking near the gate, or from Crete Road West (in TR23 E) and parking on the roadside.

Bird species diversity

An overall total of 119 species have been recorded within the tetrad, which ranks as the 20th richest in diversity amongst the 31 local tetrads as the table below demonstrates. The number of breeding and wintering species relate to those recorded in the 2007-2013 BTO/KOS atlas fieldwork.

	Total	Rank/31
Breeding species	46	19 th
Wintering species	57	22 nd
Species recorded	119	20 th

The full list of species that have been recorded is provided as Appendix 1.

Other Natural History

The richest area for flora and invertebrates is in the extreme north of the tetrad which contains a small section of the Folkestone Escarpment SSSI, in particular the lower slopes of Cherry Garden Hill and most of Castle Hill.

The habitat is unimproved chalk downland, primarily grassland dominated by Tor-grass and fescue species in a mixed sward of quaking grass, crested hair-grass and bromes. Many herbs characteristic of unimproved grassland are present such as Horseshoe Vetch, Salad Burnet, Squinancywort and Small Scabious, and there are some areas of scrub, particularly on the lower slopes of Castle Hill. The area enjoys a south-facing aspect and a warm micro-climate. Six species of Orchid have been recorded, including the rare Late Spider Orchid (though this was last noted in 2000, however it can still be found at the top of the escarpment in TR23 E).

A total of 29 species of butterfly have been recorded including many that are typical of downland habitats, such as Dingy Skipper, Brimstone, Wall, Marbled White, Green Hairstreak, Brown Argus and Adonis Blue. The most noteworthy record though relates to a Camberwell Beauty seen in a garden off Cherry Garden Avenue in August 2006.

The downland supports a wide variety of moths, including the rare Straw Belle, which is restricted to a few sites on the North Downs and one in Surrey, and other typical day flying species such as *Pyrausta despicata* (Straw-barred Pearl), *Pyrausta aurata* (Small Purple & Gold), *Pyrausta purpuralis* (Common Purple & Gold), *Oncocera semirubella* (Rosy-striped Knot-horn), Six-spot Burnet, Common Heath, the Cinnabar, Small Purple-barred and Burnet Companion. In 2021 *Epichnopteryx plumella* (Round-winged Bagworm) was found at Castle Hill by day (having only been recorded elsewhere locally at Folkestone Warren).

Six-belted Clearwings can be found in the grassland below Castle Hill and a pair has even been discovered in Sam and Vincent Lloyd's wildlife-friendly garden in the centre of Cheriton. Currant Clearwing has also been found in a garden in the tetrad.

Light trapping has produced the only area record of *Dasytis oliviella* (Scarce Forest Tubic) in a garden in Folkestone in 2021 and two rarities in Cheriton that are now probably established locally: *Caloptilia honoratella* (Pale Maple Slender) and Pale-shouldered Cloud.

Other noteworthy captures have included *Moitrelia obductella* (Kent Knot-horn), *Mecyna asinalis* (Coastal Pearl), *Evergestis pallidata* (Chequered Pearl), Fox Moth, Plain Wave, Chalk Carpet, Wood Carpet, Dark Umber, Barred Rivulet, Sloe Pug, Scalloped Hazel, the Annulet, Slender Brindle, Reddish Light Arches, Broom Moth and Red Chestnut.

The only area record of Silver-striped Hawk-moth was found within the tetrad in 1968 and other migrant species have included Convolvulus Hawk-moth, Hummingbird Hawk-moth, the Gem and Pearly Underwing. The first area record of the adventive *Duponchelia fovealis* (Dark Marbled Tabby) occurred in 2020.

Leaf miners have included *Phyllonorycter lantanella* (Viburnum Midget), *Coleophora hemerobiella* (Black-stigma Case-bearer) and the only area record of *Ectoedemia minimella* (Broken-barred Pigmy), whilst *Luffia lapidella* (Grey Bagworm) has been found in Cheriton Road Cemetery.

Historical occurrences include the only area record of *Anania funebris* (White-spotted Sable) in 1901, whilst in the nineteenth century the Forester, Scarce Forester and Cistus Forester could be found within the tetrad.

Other invertebrates include an excellent variety of *Diptera* (253 species), *Arachnida* (71 species) and *Hymenoptera* (45 species). Adders may also been found along the escarpment. A list of all species recorded in the tetrad is provided below in Appendix 2.

General History

Located on a spur of the North Downs and providing a fine vantage point over the tetrad is Castle Hill, when gets its name from the ring and bailey castle earthwork remains that date from Norman times (12th century).

The earthworks constitute the largest and most complete ringwork in the south-east of England and survive to a large extent undisturbed by later activities. Known locally as “Caesar’s Camp”, it is not Roman at all, but may have been the site of an earlier Iron Age fort.
