Spring 2021 Conference

Session Name: Extending GSS/Activity Guides with Event mapping and Application packages to automate Contractor Position Request Automation

Presenters: Chandra Yarlagadda, Aspire Consulting
Dan Neubecker, BJC Healthcare

Time: May 19, 3:00pm

[Register](#)

Abstract:

BJC Health Care partnered with Aspire Consulting to implement a Position Request Automation for contingent workers using Guided Manager Self-Service within their PeopleSoft 9.2 HCM platform. These features helped streamline the contingent staff management process through an enhanced user experience and by implementing business approvals.

We will present technical detail how we extended one delivered GSS transaction making use GSS and Activity guide configuration as well as application packages and event mapping to extend the functionality and limiting customizations.

Guided Self-Service is a highly configurable solution that has built-in approvals & workflows. This presentation will showcase how BJC leveraged the delivered GSS functionality to facilitate the contractor hiring process through a Fluid user interface. Making use of a delivered Guided Self-service framework we empowered BJC managers to create positions/ extend contractor and automatically terminate contractors at the approved timeframe. In the process laid out a standardized process that increased control over contingent staffing and automated job contractor labor management.
