

Comfort Equals Compliance

We understand the patient experience and we design for comfort. Patients who are comfortable during their recovery are more likely to follow their physician's instructions, which helps ensure proper healing and optimal results. Our garments hold their shape and stay in place to provide consistent, comfortable compression.

Superior Fabric for Optimal Patient Comfort & Compliance

Dedicated to Superior Quality

Marena is an ISO certified medical device manufacturer with strict production, quality assurance, and audit processes to ensure we consistently produce the highest quality, most effective post-surgical garments.

Consistent, high-quality, QMS regulated production

ISO

Certified ISO 13485:2016 & ISO 9001:2015 with regular audits

US FDA registered, Class 1 medical device manufacturer

Dedicated in-house customer service call support

Rigorous Testing

We partner with leading testing facilities, including The Hohenstein Institute, for competitive and performance evaluations to ensure we produce the highest quality garments.

- Compression Testing (HOSY)
- Physical Property Verification
- 3D Silhouette Imaging
- Moisture Wicking & Cooling

TARGETED COMPRESSION

SUPERIOR STRETCH

SILHOUETTE FORMING

ANTIMICROBIAL PROTECTION

MOISTURE WICKING & COOLING

Superior Fabric for Optimal Results

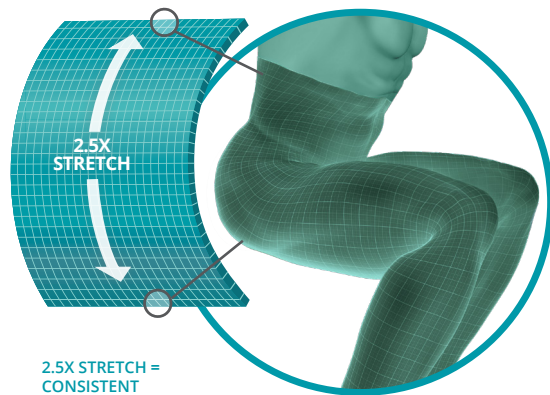

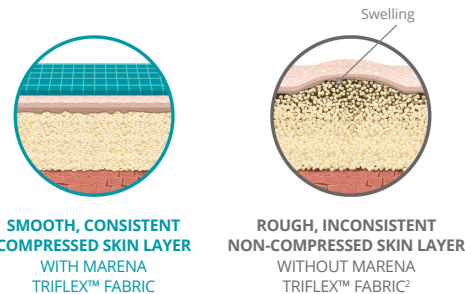

Marena's TriFlex™ fabric is engineered to provide consistent, therapeutic compression for post-surgical recovery. Our garments are designed for invasive, minimally-invasive, and non-invasive procedures.

Studies¹ show that targeted compression can help:

- Improve smoothness of the skin
- Reduce swelling, bruising, and pain
- Protect the surgical site

Consistent, Targeted Compression

Our patented TriFlex™ fabric is designed to provide **targeted compression** with **consistent stretch** on the skin's surface without compromising fit or comfort.

2.5X STRETCH = CONSISTENT PRESSURE

Our fabric's unique stretch ensures the optimal amount of compression is applied consistently without pulling, binding or constricting.

Superior Stretch

The unique construction of our TriFlex™ 3D Stretch fabric allows it to **stretch up to 2 ½ times its original length, in all directions**. This means our garments **conform to every move**, allowing for greater range of motion without constricting or binding. Whether at rest or in motion, our fabric holds its shape **while maintaining consistent compression**.

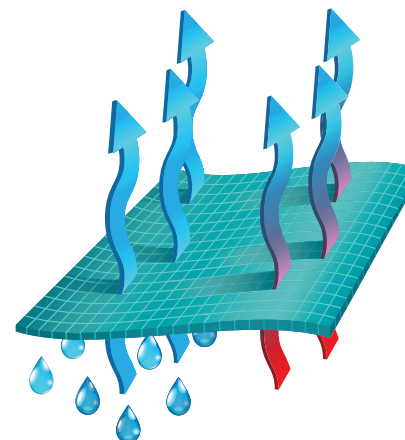

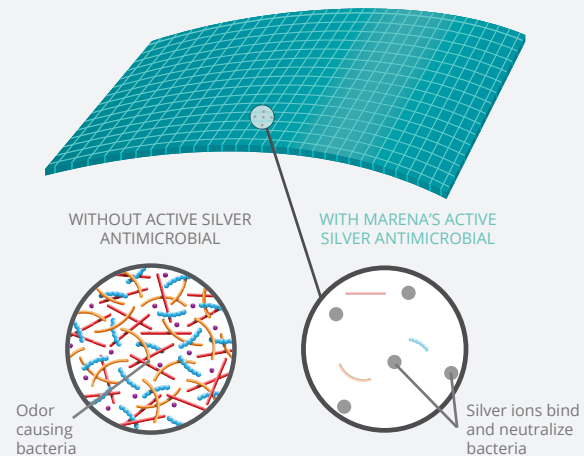

Silhouette Forming

Rigorous testing at The Hohenstein Institute shows our patented TriFlex™ fabric, which combines the power of soft stretch Lycra with a warp knit construction, **stretches and contours** to the body to **help improve skin laxity, and smooth out soft tissue inconsistencies** for a more desirable silhouette.

Antimicrobial Protection

TriFlex™ fabric harnesses **the elemental power of active silver** using a patented delivery system to **bind and neutralize harmful agents, slowing their spread**.

The **antimicrobial silver agent remains active on the fabric through multiple washes** and will not detach or degrade at high temperatures.

Moisture Wicking & Cooling

Our TriFlex™ fabric is **naturally cooling and breathable**, allowing **moisture to wick away from the body**. The breathability and naturally cooling nature of our fabric helps to keep the skin clean and dry which may help to promote healing and improve skin appearance.
