

I am the Technology Integration Specialist for KG and Nursery. I began my career at BBS in 1998, as an Art teacher, then as a Preschool teacher. Seven years ago I was given the opportunity to Pilot an iPad program for my KG1 classroom, which my students and I welcomed passionately; believing that technology is an important tool in the education of our 21st century global learners. As long as technology is interactive, young learners can benefit greatly, develop their creative skills and curiosity, enhance their thinking skills and to problem solve independently.

I have presented workshops at PEAK Conferences in Kuwait, NESA and in school as Professional Development Training. I have also attended and participated in workshops related to information technology, Hitachi trained Interactive Whiteboard Trainer, and certified TESOL educator.

As Technology Integration Specialist, I offer training and support to teachers on new and innovative learning trends to integrate technology interactively into the classroom, to reinforce learning and support the curriculum of BBS.

I look forward to sharing and collaborating on the latest learning trends in technology.

"The most valuable resource that all teachers have is each other. Without collaboration our growth is limited by our perspectives."

~ Robert John Meehan
