

WHIPLASH

Whiplash - Common Effects and Symptoms

The term whiplash refers to injuries sustained to a person's neck during primarily a motor vehicle accident. Additional injuries can occur due to our body mechanics during a crash and depend on risk factors, crash forensic and occupant positions to name a few factors.

Current whiplash associated disorders can include:

Injuries to the muscles and ligaments (myofascial injuries) of the back

Headaches

Dizziness

Blurred Vision

Paresthesias

TMJ

Acute Stress Reactions

Traumatic Brain Injuries

CTS

SI Joint Dysfunction

Shoulder Injuries

Wrist Injuries

Knee Injuries

Hip Injuries

Chest Injuries

Stomach Injuries
