

SaSi - Spores and Seeds initiative is connected to the GROW anchor of the Inspiration Hub, and is based on the concept that we can grow a Regenerative Food Economy seeded by decentralised spore and seed library banks.

These self-governed library banks act as a secure foundation on which to build local regenerative enterprises and collaboratives, connecting people who are passionate contributors to individual health and wellbeing and the thriving of the community as a whole.

SaSi is an invitation to co-create an open-source regenerative project, locally managed and globally connected through the SEEDS ecosystem, for the propagation and mindful sharing of spores and seeds and the many diverse and fruitful harvests and rewards it brings.

Market value to valued markets

The global mushroom market size was valued at \$46.1 billion in 2020 and is expected to grow at a compound annual growth rate of 9.5% from 2021 to 2028, reaching nearly \$87.5 billion.

The global vegetable seeds market was valued at \$5.78 billion in 2019 and is projected to reach \$10.48 billion by 2027. [Source](#)

We have the technology and practical tools available today, that make it possible to redirect a significant portion of these market valuations into building local regenerative micro-economies with decentralised spore and seed libraries and banks.

We also have the technology, tools and human capital available to co-create regenerative spore and seed opportunities, that are capable of contributing to the development of flourishing and prosperous local economies and regenerative ecological environments, in collaboration with eco-conscious farmers and consumers.

SAFE (Seed And Food Exchange) There is a vast network of individuals and organisations committed to returning seed and food sovereignty to the people. Connecting them all through a shared vision of an equitable, regenerative and healthy seed and food economy, would not only create an impressive and influential global movement, but could also act as a decentralised economic framework that is both stable and balanced. Especially so, if built on the foundational value of open-pollinated seed and nutrient-dense biodynamic food, grown in naturally regenerative soil and exchanged locally.

FARM (Food And Regenerative Mushrooms) The Mushroom Kingdom is of critical importance and enormous value to all life on earth. Mushrooms have huge potential for helping individuals to heal and grow. Nowhere is this more apparent than in the rapidly expanding natural health and wellbeing sector, which is increasingly looking to the robust scientific evidence supporting the healing power of mushrooms, both as healthy food and as physiological and psychological medicine.
