

CURIOSITY is that thing that makes us want to learn more about something. CURIOSITY is what makes discoveries possible; it's what drives people to know more about the world (or universe!) around them. As we explore the world around us, and allow our CURIOSITY to help us discover more about it, it is important that we do so in a way that's smart and safe.

Read the stories below about people who are curious about something. Then, for each story, write two endings: one where the person in the story can learn more while still being safe and smart, and the other when they forget to be safe and smart.

Story	Safe and Smart ending	Not-so-smart ending
Josh wants to know how the light turns on (or off) when she flips the switch...		
Makenna sees some bunnies outside in the yard, and wants to know how soft they are, and where they go when they leave the yard...		

Our imagination can drive our CURIOSITY. Check out some of the pictures below, then write something about them; what are they, and what do they do?

Now, think of something that you are curious about; something you'd like to know more about. It can be anything at all: technology, space, animals, absolutely anything at all. What is something you are curious about? _____

How could you find out more about this in a way that's safe and smart? _____

What are some things that could happen if you're not safe or smart when learning about that thing? _____
