Moving Through Life

Finding the Pleasure in Exercise

Sonia Osorio

We're busier than ever with longer workdays, less leisure time, shorter lunch hours, longer commutes, and more demands than ever before. We may even be in a job that doesn't fulfill us, yet we spend most of our time there. When the day ends, we have almost no energy left to do what we enjoy. How to find a healthy balance?

Plenty has been written about the therapeutic benefits of exercise. So, why aren't more people reaping those benefits and moving toward health and well-being? We need to reexamine our notion of what exercise and movement are and consider what we're moving toward or away from. Then we can begin to ask ourselves other questions: Not

reoriented our point of view to notice where the opportunities lie? We can begin by simply redefining exercise (with its sometimes negative connotation of obligation) to movement. Already opportunities arise: How do we want to move in our bodies and in our lives? How can we have fun doing that? How can we move more (or maybe less, if we need to slow down)? How does it feel to be still? How can we make time to move into pleasure, to move with pleasure? Already, the notion of movement takes on a more healing expression. Rather than simply being another item on our to do list, it becomes a way for us to examine our lives, to see where we can move toward health, and use physical activity as a way to support this.

Pleasurable movement is motivating, connects you with your body, and comes in many forms.

just are we fit, but are we physically, emotionally, and spiritually healthy? Are we happy? Do we enjoy how we're moving through life? How can we integrate more healing movement into our days?

Exercise as "Medicine"

We sometimes see more barriers than options to exercise. But what if we

"When most people think of medicine, they visualize something material like a pill to be popped, a liquid to be swallowed, or an injection to be endured," writes Carol Krucoff, author of "Healing Moves: How to Cure, Relieve, and Prevent Common Ailments with Exercise" (Harmony Books, 2000).

Moving Through Life

Prevent the Afternoon Slump

Try This Breathing Exercise

Continued from page 1

"Some might also consider surgery, tests, or procedures ... [But] simple physical activity can have profound healing effects."

Krucoff, who cowrote the book with her husband, Mitchell, a Duke University cardiologist, advocates movement as preventive medicine, saying it's an ideal way to combat the increasing number of inactivity-related health conditions such as heart disease and obesity. This could actually be expanded to include stress-related conditions. In fact, it's often this combination of inactivity and increased stress that wreaks havoc on our immune system, endocrine system, and circulatory system. Every system in our body, in fact, responds to stress and inactivity. But, if this is true, then the inverse is also true: every system in our bodies will also respond to movement and pleasure. To make movement pleasurable and to use it as a way to reconnect with our bodies is, in many ways, the perfect antidote to the cycle of inactivity/hyperactivity and stress. As we move more in this way, we gain energy and health, we feel rejuvenated and relaxed, and we become more physically and emotionally aware.

Emotional Fitness

We often focus on physical fitness, but any movement toward health must also include emotional and spiritual fitness. Psychologist Nancy Mramor, PhD, author of "Spiritual Fitness" (Llewellyn Publications, 2004), ties emotional fitness with our physical health and with our heart's expression. "There is evidence that the largest number of heart attacks occurs on Monday morning between 8 and 9 a.m.," she says. "This occurrence is related to the experience called joyless striving. It applies to feelings of having to force yourself to go to a job that you have no interest in, or even truly dislike. Clearly these feelings suggest a lack of emotional fitness in the match between the employee and the job." When we're emotionally connected to our work in a healthy way and to one another, we not only survive, we thrive.

Personal Health

Interpersonal relationships, in fact, are one of the three major causes of life stress, along with environmental events/conditions and personal attitudes and beliefs. In his book, "Love and

Survival" (Harper Collins, 1998), renowned physician Dean Ornish, who first proved that heart disease was reversible through lifestyle changes, says that in order to survive, we need not only care for our lives, but the lives of others. Individuals with supportive relationships get sick less, heal faster, and live longer.

Our health and well-being are not about being hyper-active or inactive. They're about finding a balance, making our actions conscious, and learning to move in ways that are both healthy and appropriate in our own lives, then moving this healing energy out toward others. So, rather than exhausting or limiting our energy, we learn to expand it. Then we can begin exercising in a whole new way--exercising our right to choose and to better understand our body, our life, and what we want to be doing with it.

Begin by checking in with yourself as you're moving through your day: How does your body feel right now? How are you breathing? Where is this movement taking you? Do you feel good? Are you satisfied? Are you happy? If not, then change something. Change how you're moving, where you're moving toward, or look at what you're moving away from.

"Become the change you seek in the world," Mahatma Ghandi said. This isn't about a temporary quick fix to end a bad habit, lose some weight, or fill our time. This is about long-term change--making more conscious use of our time and of our life. It's about moving through life in healthy and healing ways, and expanding our idea of who we can be. Then our view of the world widens, our heart grows, our spirit soars, and our body moves toward true change. This is the healing power of movement.

Enjoyable exercise boosts physical health as well as emotional well being.

Prevent the Afternoon Slump

Some Tips for P.M. Energy

Jerry V. Teplitz

If you're like most people, you've experienced the afternoon slump. You know the feeling -- it's only 2 p.m., yet you feel drained. Fortunately, you can employ methods to reduce the slump's frequency and shorten its duration.

DRINK WATER.

Your body uses water even if you're not exercising. If you wait until you feel thirsty, you're already dehydrated. Keep a water bottle handy all day.

AVOID SUGAR AND SIMPLE CARBOHYDRATES.

While a mid-afternoon candy bar may give you a quick rush, it actually worsens the slump. Instead, choose protein-rich foods and complex carbs.

EAT SMALL MEALS.

Have six small meals over the course of the day instead of three large ones. Big meals cause the digestive process to divert blood from your brain to use in the digestive track.

EVALUATE YOUR LIGHTING.

Most offices are lit with cool, white fluorescent tubes, which have a terrible effect on how people feel and function at work. A better option is full-spectrum, fluorescent tubes.

TAKE TIME FOR WALKS.

Walking gets your blood circulating, helps you breathe better, and stimulates your brain due to the increased blood flow. Take a 5- or 10-minute walk during the day.

MEDITATE.

Meditation is great for rejuvenating your body. By meditating for 15 to 20 minutes twice a day, you're keeping your body continually energized and rested.

TAKE TIME TO BREATHE AND STRETCH.

Deep breathing exercises give you an energy boost. Also, stand up and stretch to increase blood flow and stimulate the lymphatic system.

HANDLE NEGATIVITY.

Negative people and images can have a

draining effect on your energy. Make a conscious effort to stay positive.

Avoid the drain office settings can bring on.

Try This Breathing Exercise

Anne Williams

Do you ever find yourself unconsciously holding your breath when you're tense? This can cause tension to build in your body and may let the chest collapse, leading to misalignment.

Proper breathing provides oxygen to the muscles and body, helps you stay relaxed and centered, and even helps you maintain correct body alignment throughout your day.

You can also use breathwork as part of a stress-reduction program by following this progressive relaxation exercise.

1. Begin by lying in a comfortable position without crossing your arms or legs, and focus on your breathing to create a slow, deep pattern. Inhale through your nose while counting to 10 and expanding your abdomen. Hold the breath for one second, and exhale

through your nose on the count of 10. Inhale and exhale in this pattern five times.

2. Beginning with your head, tense your facial muscles as tightly as possible and count to five. Release the muscles completely, and sense the muscles feeling heavy and still. Work down your entire body, tensing muscle groups and then relaxing them. After the head, move to the neck, chest, arms and hands, abdomen, back, thighs and gluteals, lower legs, and feet.

3. After relaxing each set of muscles, mentally scan your body for any areas of remaining tension and ask those areas to relax completely.

4. Repeat the slow breathing exercise.

5. Gently begin to move your body to come out of the deeply relaxed state.

Try using progressive relaxation directly

before or after your sessions, directly before bed, or at any time during the day as a pick-me-up. Focus on taking full, deep, even, rhythmic breaths. With a little practice, you can become more aware of your own breathing patterns and use breathwork effectively as you move throughout your day.

*You are more
precious to this
world than you
will ever know.*

-Lili Rhineheart

In a world that continues to seem upside down we are still here to support you and your health needs.

We send out of all the love and gratitude that we are able to be part of your journey.

Love & healing,
