Describe any specific problems you have observed or want to correct. _____

PROCEDURE FOR TAKING SOIL SAMPLES

NOTE: Soil tests results can be no better than the soil sample itself. For a soil test to be of benefit, the sample must represent the area sampled. Proper collection of samples is **extremely** important. **Read instructions below before taking samples.**

1. Soils that differ in appearance, plant growth, or past treatment should be **sampled separately**. One sample can represent only one soil condition. Even when the area is small, if the plants are growing well in most of the area but poorly in a spot, collect a sample from the poor spot and another from the good area so that lime and fertilizer recommendations may be made for both areas.
2. Avoid taking samples that include organic residue or recently applied fertilizer. Do this by scraping the spots clean before sample is taken.
3. Each sample should be a mixture of subsamples from at least 10 or more places in each area. Areas treated differently should be sampled separately. For field crops, a single sample should not represent more than about 10 acres. For cultivated areas, sample to the depth of plowing, usually about 6 to 8 inches. For established pastures, hayfields, and lawns, sample the top 2 to 3 inches of soil. **Wet samples should be sent in plastic bags. Send 1 pint, 2 cups, or 450 grams.**
4. **Label** each container with the sample number or name. Keep a record of the area represented by each sample number or name.
5. Give information requested on reverse side of this sheet.
6. **Make check payable to: Auburn University–Soil Testing Lab**
7. Enclose samples, information sheet, and check and mail to:

Soil Testing Laboratory
ALFA Agricultural Services & Research Building
961 S. Donahue Drive
Auburn University, AL 36849-5411
Telephone: (334) 844-3958
www.aces.edu/soiltest
soiltest@auburn.edu

8. Test results and recommendations will normally be mailed within 3 to 7 days from the time the samples are received.

Do not use this form for nematode soil samples. Nematode sample forms are available at <http://www.aces.edu/dept/plantdiagnosticlab>.
