CROUSE/BACHER ENTERPRISES

Formulated & Manufactured By

Natural Emulsifier Cleaner
No Abrasives
Safe For Septic Tanks & Septic Fields
Non Caustic-Easy On Your Hands
Does Not Leave Any Harmful Residue

-Environmentally Safe, Organic, Bio-Degradable, Non-Toxic.

Safe to use around children and pets, **but like all cleaning products keep it safely out of reach of small children.**

-Anti-static- repels dust instead of attracting it like some other cleaners do.

-Doesn't leave a film or residue to re-attract dust and grime or to build-up over time-things are easier to clean next time.

-Non corrosives- won't damage finishes.

-Works by breaking down and emulsifying dirt, oil and stains.

-Doesn't "bleach out" or "corrode" stains. Always allow B.E.S.T a little time to work on heavy stains.

-Don't let freeze. If it does, stir it up and keep using it. Try melting it in a pot on a stove, gently like butter, and then pour it back into the bucket. Let cool and use.

-Store some in a small container with tight lids. Keep in laundry, kitchen, bathroom, garage, cottage and office.

-Always use B.E.S.T with water, even when using full strength water activates the cleaner.

-Rinsing is not always necessary, but does ensure a thorough cleaning job. Rinse when using B.E.S.T full strength or in strong mix. Ensures you have removed the cleaner and all the dirt or stain.

-Doesn't remove permanent dyes. Always check materials and carpets for color fastness. Some dyes may run with just water. Some dry cleanable materials may water stain.

-Some red, orange, and grape soft drinks and kool-aids have red food dye additives which permanently dye carpets and materials. Permanent markers are permanent and some ball-points have permanent inks and maybe difficult or impossible to get out.

-Doesn't remove dry paint so is safe to use on painted walls and cars. Use for wet paint clean up.

-Doesn't usually remove rust, but can take of surface rust or rust in material, depending on the kind of material. Try using a soft toothbrush with full strength B.E.S.T on rust stains in material.

-If you live in the country and/or your water is hard and has lots of minerals and sodium in it, you may need use a little more B.E.S.T for your solutions. We suggest that when making MIX #1 or #2, try using distilled or bottled water.

Mixing Instructions

B.E.S.T is safe to use full strength. A small amount of white soap may settle to the bottom of containers after mixing. Just shake a little and use. The more B.E.S.T used the thicker the solution. If you melt B.E.S.T and allow it to cool without adding water, B.E.S.T will return to a gel state. B.E.S.T can be melted again and again.

Step 1- Measure amount of B.E.S.T needed (see recipes below) into glass measuring cup. Add small amount of water. Melt in microwave, set power to half setting of 5. In a pot on the stove set to 4. Do not boil! B.E.S.T also melts if small blobs dropped into boiling hot water.

Step 2- Pour into 4 liter plastic jug.

Step 3- Carefully add very hot water and then fill jug the rest of the way with hot water from the tap.

Step 4- Shake jug gently. Fill/refill spray bottles from jug. B.E.S.T won't separate. Use hot or cold water.

Please make sure to mark all jugs and bottles clearly!

LIGHT MIX #1-For windows and mirrors.

20 mils B.E.S.T and 4 liters Hot Water.

Mix will be very lightly colored. No rinsing required. **Note: The first time you use B.E.S.T on your windows and mirrors, give them a good cleaning. Perhaps use the MIX #2 and rinse.** Use a no scratch sponge. This will remove any old film from vinegar and ammonia based cleaners. As old film comes off you can get streaking so get rid of the film first, then clean you windows and mirrors with MIX #1. **If you get streaks later, you may have made MIX too strong!** Add a little more hot water.

HEAVY MIX #2- For all purpose cleaning.

200 mils B.E.S.T and 4 liters Hot Water.

Use this mix like spray laundry stain remover or all-purpose cleaner for walls, floors, furniture, cars, leather and vinyl, stoves and counter tops, fireplace bricks and stones or any other surface. Make the mix a little stronger or a little weaker, depending on how you are using it- experiment! Sometimes we use **240 mils B.E.S.T to a 4 liter jug of water** for spray laundry stain remover for heavy stains. We use only **150 mils to 4 liters** of water for doing floors.

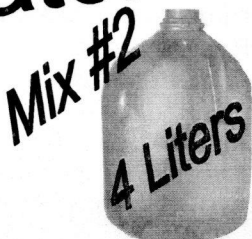

EXTRA HEAVY MIX #3- For Extra Tough Jobs

200 mils B.E.S.T and 1 liter of very hot water.

Great for bathrooms. Store in a squeeze bottle. This MIX, **loosen it up.** Use for bathrooms, cleaning jobs. Put into working hands!

when cool will be very thick. **Give it a good shake to** heavy laundry stains, and tough dispenser for those greasy

Water Very Hot!

Soft Terry Cloths- Terry Cloths work well as are coarse and absorbent- chamois, j-cloth or old towels also work well- men's cotton hankies are good for windows and eye glasses.

"Teflon" is an ordinary sponges with thin white scouring surface glued to one side- test on delicate surfaces-heavier duty ones (green scouring surface) may scratch.

Stiff Bristle Nylon Scrub Brushes - used where you need extra scrubbing power like ovens or rough textured items – try a fingernail brush or toothbrush for delicate surfaces.

Specific Uses

Glass and Mirrors; Dust Repellent for Windshield on Tractors and Farm Equipment – Apply B.E.S.T full strength with very wet cloth- make suds- let dry one minute- buff with dry cloth-may be streaky- use MIX#1 to work out streaks- Use for TV, computer screen.

Outside Windows- Hose down window- use B.E.S.T full strength on long handled sponge mop- wash windows- rinse with garden hose- let air dry.

Windshield Wash- In summer fill reservoir with MIX #1 or slightly stronger. Great on bugs!

Wiper Blades- Rub B.E.S.T full strength on wipers to clean and soften- won't stick to windshield so won't tear- save \$ on blades.

Bugs, Tar on Vehicles- work in shade- rinse, then apply B.E.S.T full strength with wet brush or scrub sponge- let stand five minutes-rinse-for tough blobs of tar, apply a full strength blob of B.E.S.T and let stand until dissolved.

Tires, Chrome, Mags-work in shade- use very wet scrub sponge or brush- apply full strength B.E.S.T on wet surface- work up suds-let stand a few minutes-rinse.

Boats, trailers, autos, vinyl and aluminum siding, chrome, brass, stainless steel, appliances - use MIX #2 or #3 with a soft cloth, scrub sponge or soft brush. If very soiled, wet surface, use B.E.S.T full strength with a scrub brush or sponge. Work up suds – let stand a few minutes- rinse. For autos, boats, etc. rinse with a hose, then apply cleaner. To remove tar, old wax, oxidization and grime apply B.E.S.T full strength. Let stand 20 minutes. Rinse well. Leaves auto paint looking a little flat. Apply new wax to bring out luster of the paint- you are now polishing paint instead of old grime.

Grease, Oil stains on driveways- use hot water and hot cleaner- wet stain- apply full strength B.E.S.T with very wet scrub brush- work up suds- let stand-rinse

Hand Cleaner – Use MIX #3 in a dispenser on wet hands. Or wet hands and use full strength. Rinse.

Gum, Silly Putty, Tar, Candle Wax – spray with MIX #2. Apply/work in B.E.S.T full strength – let stand to emulsify – rinse.

Leather and Vinyl, Naugahyde, Plastic – (auto interiors, furniture, shoes, saddles, and boots) - **DO NOT USE ON RAW LEATHER OR SEUDE OR VERY DELICATE OR ABSORBENT LEATHERS. TEST FOR COLORFASTNESS ON LEATHER FIRST- USEMIX #2 ON INCONSPICUOUS SPOT-RINSE-LET DRY, THEN PROCEED.** Use soft cloth and MIX#2-spray-let stand thirty seconds-wipe. Rinse if necessary. If tough job apply B.E.S.T full strength with wet cloth, sponge or brush (fingernail brush)-rinse- wipe dry. Softens leathers and vinyl's- no sticky residue left behind.

Laundry Stains-spray with MIX#2 or work in some #3- let stand few minutes or overnight if necessary. If really tough, work in a little full strength B.E.S.T after spraying. Use a small brush or toothbrush for scrubbing. Let stand a while to break stain down then throw in washer where agitation can work out stain. **TEST MATERIALS FOR COLORFASTNESS IF NECESSARY. SOME DRYCLEANABLE MATERIALS WATERSTAIN.**

Detergent Replacement-Use MIX#2 add 250 mils/1cup to your wash, works very well in front loader washers as it doesn't suds up!

Detergent Booster- for sheets, socks, overalls, children's clothes- partially fill washer with warm/hot water (just enough to cover what you are washing) - put in regular amount of detergent and a cup of MIX#2- swish- add your laundry-swish a little-let soak half an hour or overnight then fill the machine with water the rest of the way and wash normally. Great for sheets- do this about every fourth wash. Try soaking socks in a bucket with detergent and MIX #2 overnight, then throwing socks and mixing in washer and wash normally.

Hardwood Floors- Mix 1 tablespoon of B.E.S.T in 20 liters of hot water, you can spray and mop or use it right out of the bucket.

Fiberglass showers, ceramic tile- wet surface first- use MIX #3 or if really dirty apply B.E.S.T full strength- using wet scrub sponge, work up suds and let stand. Use a wet scrub sponge to rinse. Reapply if necessary as may be taking off layers, the same way it went on. If tile grout won't clean check the hardware store- you can remove the old grout without taking down the tile, and/or re-grout. Seal it and then you'll be set.

Pet Stains/Liquid Stains in Carpets- Work full strength B.E.S.T into stain and make the area very wet, as the stain will likely be down to the very bottom of the carpet, let sit for 30 minutes. Blot with an absorbent cloth, try to remove as much as will come. Reapply full strength B.E.S.T. Place a dry absorbent cloth on the area and put something heavy on top of the cloth, let sit. This will pull the remainder of the stain out. It's gone for good and so is any smell!

Spots on Carpet/Upholstery-Test for colorfastness. Apply full strength B.E.S.T to very wet terry cloth to gently work cleaner into stain (we like to use our fingers to work it in). Make sure to get cleaner as deep as stain has gone. Work in small circles, from the outside to the center for the stain. Let stand for a few minutes in necessary- rinse with wet cloth. Adding rinse water boosts the cleaner and helps release the stain...*Blot thoroughly with dry towel to remove as much water as possible. If stain comes back, clean again to draw remainder of stain from underlay and blot.*

Carpet Steam Machines- We prefer steam machines to shampoo machines as they extract the water, grime and cleaner. Pretreat stained or heavily soiled areas with full strength B.E.S.T. Use 240 mils with 20 liters very hot water. Clean carpet with solution. Go over again with plain rinse water. Rinse water will be twice as dirty as B.E.S.T keeps on working to break down dirt and residues from other cleaners. Carpets are soft and cleaner. No sticky residue to re-attract dirt so carpets stay cleaner longer and are easier to clean next time.

Furniture, Floors, Walls- Use MIX#2, safe for all floors and finishes. Rinse to ensure good job. Use full strength with wet scrub sponge for heavily soiled spots- let stand- rinse. (I like to spray MIX #2 on my floor and then damp mop).

Wax Removal- Apply B.E.S.T full strength or MIX #3 with wet mop, sponge, brush or cloth- let stand- rinse.

Counter Tops and Food Prep Areas- B.E.S.T is not a disinfectant cleaner by itself, for these surfaces add 20 mils of **bleach** to spray bottle with MIX #2.

Ovens and Barbecues- Spray surface with MIX #2 then apply B.E.S.T full strength with scrub brush or heavy duty scrub sponge-work up suds- let stand an hour or overnight-rinse. Rinses away cleanly- no fumes to burn off. **Use fine steel wool for burned on food.**

Jewelry- let soak in MIX #2 in small jars or use old wet toothbrush with a little B.E.S.T full strength.

Live plants- use 125ml to 4 liters- spray plants and rinse- cleans film off leaves.

Patio furniture-Use MIX #2 or #3 with scrub brush. If necessary use full strength with wet scrub brush on wet furniture- let stand few minutes- rinse with garden hose.

Fireplaces- Use full strength with a stiff brush and water. Let stand 5 minutes, check area. And rinse.

Pressure Washers- Mix 200 mils to 20 liters of hot water. Spray on, let sit for 5 minutes and rinse.
