QUESTION 1: N/A

Question	Marking Guidance	Mark	Comments
2(a)	 (Taxis is) movement towards/away from a stimulus / a directional response/movement (to a stimulus); (Move towards) temperature they were used to/cultured in; 	2 max	Movement towards temperature they were used to = 2 marks
2(b)	 Hungry, so seeking food / in absence of food respond to temperature; Move towards temperature they were used to/cultured in; Associate (this temperature) with food; (Then) stay in this temperature; 	3 max	Ignore references to temperature and enzymes 1. Must be stated not inferred from other statements 3. Accept they think food is here 3. Stated not inferred
2(c)	 (Dim) worms live in soil/dark/ affected by bright light / dim light is like normal environment/what they are used to; (Even) because worms might move towards/away from bright light / to avoid creating light gradient / prevent worms showing phototaxis/ all parts of surface exposed to same light; (Dim light) ensures heat from light not a variable/ heat from lamp could kill/dry out worms; 	2 max	2. Accept to avoid kinesis due to light 3. not just to control variables/factors

Question	Marking Guidance	Mark	Comments
3(a)	 (In myelinated) action potential/depolarisation only at node(s); (In myelinated, nerve impulse) jumps from node to node/saltatory; (In myelinated) action potential/impulse does not travel along whole length; 	3	The question is about speed of transmission, not repolarisation or related matters 3. Accept converse for non-myelinated
3(b)	 Probability of obtaining this difference by chance; Is less than 5%/less than 0.05/less than one in twenty; Difference is significant; 	2 max	1. and 3. Reject 'results' once only 1. This statement often split round 2. 2. Accept is 4.7%/0.047 but reject less than 4.7%/0.047 2. Accept correct greater than 95%/greater than 0.95 arguments
3(c)	 (All) dementia results lower (than control group)/non-dementia result higher; Error bars do not overlap so differences are (possibly) significant; Dementia may be due to other factors / not only due to a lack of myelin; (Because) big/significant differences in myelin in different dementia; Only small sample sizes/only one study/ more data required; 	4 max	 Neutral results Accept not due to chance/statistically significant In this context, accept references to standard deviation Accept suitable named factor e.g. genetic Not just 'different'

QUESTION 4: N/A

Question	Marking Guidance	Mark	Comments
5(a)	 No/less oestrogen produced (by follicles/ovaries); No/less negative feedback (by oestrogen); On pituitary (gland); 	2 max	Ignore references to corpus luteum and progesterone Ignore oestrogen inhibits FSH but accept oestrogen inhibits release/production of FSH
5(b)(i)	 (Less FSH so) fewer/no follicles develop; (So) fewer follicles (will be) destroyed (by chemotherapy); (So) more follicles left for later in life/after treatment; (So) more eggs; 	3 max	1. Neutral fewer eggs develop Accept converse statements Ignore references to LH and ovulation Accept for one mark statement of set/limited number of follicles present (at birth)
5(b)(ii)	 (Artificial hormone,) 1. Similar shape/structure/binding site to normal hormone; 2. So binds to (same) receptor and stops normal hormone binding; 	2	1. Reject same shape 1. Accept part of shape same as hormone/similar tertiary structure Reject references to active sites, enzyme inhibitors and substrates. Accept references to binding sites and competitive inhibition of hormone binding sites

Question	Marking Guidance	Mark	Comments
6(a)	 (Phosphocreatine) provides phosphate/phosphorylates; To make ATP; 	2	Accept P _i or P in circle Reject phosphorus
	2. To make ATF,		
			2. Accept: ADP + CP → ATP + C
			Neutral – provides ATP
6(b)	One suitable suggestion;	1 max	Neutral
	eg		lifestyle/diet/illness
	Genetic differences;		
	Level of fitness/amount of regular exercise done/mass of muscle;		
	3. Sex;		
	4. Ethnicity		
	5. Metabolic rate;		
	6. Number of fast/slow muscle fibres		
6(c)	(From graph, phosphocreatine) takes longer to remake as people get older;	4 max	Accept positive correlation between age and time to reform phosphocreatine
	Fast muscle fibres used for rapid/brief/powerful/strong contractions;		
5	Phosphocreatine used up rapidly during contraction/to make ATP;		
	Anaerobic respiration involved;		
	(As people get older) slower metabolic rate/slower ATP production/slower respiration;		
	6. ATP used to reform phosphocreatine;		
	7. Lots of phosphocreatine in fast fibres;		

Question	Marking Guidance	Mark	Comments
7(a)(i)	 Amino acid/protein/enzyme/urea/nucleic acid/chlorophyll/DNA/RNA//ATP/ADP/AMP/NAD/NADP; DNA/RNA/nucleic acid/ATP/ADP/AMP/NADP/TP /GP/ RuBP /phospholipids; 	2	1. and 2. Accept any named equivalent examples e.g. nucleotides. Neutral: ammonia/nitrite /nitrate/ phosphate.
7(a)(ii)	 Saprobiotic (microorganisms/bacteria) break down remains/dead material/protein/DNA into ammonia/ammonium; Ammonia/ammonium ions into nitrite and then into nitrate; (By) Nitrifying bacteria / nitrification; 	3	 Accept: saprobionts /saprophytes/saprotrophs Neutral: decomposer Allow correct chemical symbols. Accept: correct answers which use incorrect bacteria e.g. nitrogen-fixing but then reject m.p. 3.
7(b)	 Nitrate/phosphate/named ion/nutrients for growth of/absorbed/used by plants/algae/producers; More producers/consumers/food so more fish / fish reproduce more / fish grow more / fish move to area; 	2	2. Must have idea of more plants related to some increase in fish.

Question	Marking Guidance	Mark	Comments
8(a)	Succession;	1	Ignore any word in front of succession e.g. secondary/ecological succession. Neutral 'forestation'
8(b)	 Greater variety/diversity of plants/insects / more plant/insect species; More food sources / more varieties of food; Greater variety/more habitats/niches; 	3	1. Neutral: more plants 2. Neutral: more food / more/greater food source (singular) 3. Accept: more nesting sites 3. Q Neutral: more homes/shelters.
8(c)(i)	Temperature and carbon dioxide;	1	Neutral: water, chlorophyll
8(c)(ii)	Shows (gross) photosynthesis/productivity minus respiration / more carbon dioxide used in photosynthesis than produced in respiration;	1	1. Correct answers are often shown as: net productivity = (gross) photosynthesis – (minus) respiration.
8(c)(iii)	 (Shade plant) has lower (rate of) respiration/respiratory losses; (Shade plant) less CO₂ released at 0 light intensity/in dark; Greater (net) productivity / less sugars/glucose used / more sugars/glucose available; 	2	Accept use of figures. Accept: lower compensation point. Neutral: any references to rate of photosynthesis.

Question	Marking Guidance	Mark	Comments
	Prevents <u>oxygen</u> being taken up/entering/being absorbed;	1	Accept: any idea of no contact with oxygen.
9(a)			Neutral: for anaerobic respiration / anaerobic conditions.
9(a)			Neutral: prevents entry of air.
			Reject: prevents entry of oxygen and another named gas.
	0.0155 / 0.016 = 2 marks;;	2	
9(b)(i)	0.0775 / 0.077 / 0.078 / 0.08 = 1 mark		
	/ 0.62 = 1 mark	<u> </u>	
9(b)(ii)	Glucose decreases/is a limiting factor / increase in ethanol / yeast/cells die / toxins build up;	1	Accept: glucose is used up.
9(b)(iii)	(Stays the) same/level/(relatively) constant; Same volume/amount of oxygen uptake and carbon dioxide release;	2	Note: if m.p.1 is awarded m.p 2 can be obtained without referring to 'same volume/amount'
9(c)	Oxygen is final/terminal (electron) acceptor / oxygen combines with electrons and protons;	2 max	
	Oxidative phosphorylation / electron transport chain provides ATP;		
	Only glycolysis occurs without oxygen / no Krebs / no link reaction;		

Question	Marking Guidance	Mark	Comments
10(a)	 Carbon dioxide combines with ribulose bisphosphate/RuBP; Produces two glycerate (3-)phosphate/GP; GP reduced to triose phosphate/TP; Using reduced NADP; Using energy from ATP; Triose phosphate converted to glucose/hexose/RuBP/ ribulose bisphosphate/named organic substance; 	6 max	 Accept: any answer which indicates that 2 x as much GP produced from one RuBP. Must have idea of reduction. This may be conveyed by stating m.p. Reject: Any reference to reduced NAD for m.p.4 but allow reference to reduction for m.p. 3. Must be in context of GP to TP.
10(b)	 Carbon dioxide is a greenhouse gas; Deforestation/trees removed so less carbon dioxide removed by photosynthesis; Burning/combustion releases/produces carbon dioxide; Methane is a greenhouse gas; Any valid reference to source of methane, e.g. rice fields, landfills, cattle; 	4 max	1. Accept: carbon dioxide contributes to greenhouse effect. 4. Accept: methane contributes to greenhouse effect. Neutral: any references to other gases.
10(c)	 Use a grid / split area into squares/sections; Method of obtaining random coordinates / numbers, e.g. calculator/computer/random numbers table/random number generator; Count number/frequency of plants in a quadrat; Calculate mean/average number (per quadrat/section); Valid method of calculating total number of bluebells/plants. e.g. mean number of plants per quadrat/section/m² multiplied by number of quadrats/sections/m² in wood; 	5	Neutral: any reference to using belt/line transects. 1. Accept: use of tape measures/map/area with coordinates. 3. Accept: determine percentage cover. 4. Accept: method of calculating mean. 5. Neutral: 'scale up' without further qualification.
