

Folkestone and Hythe Birds

Tetrad Guide: TR13 D

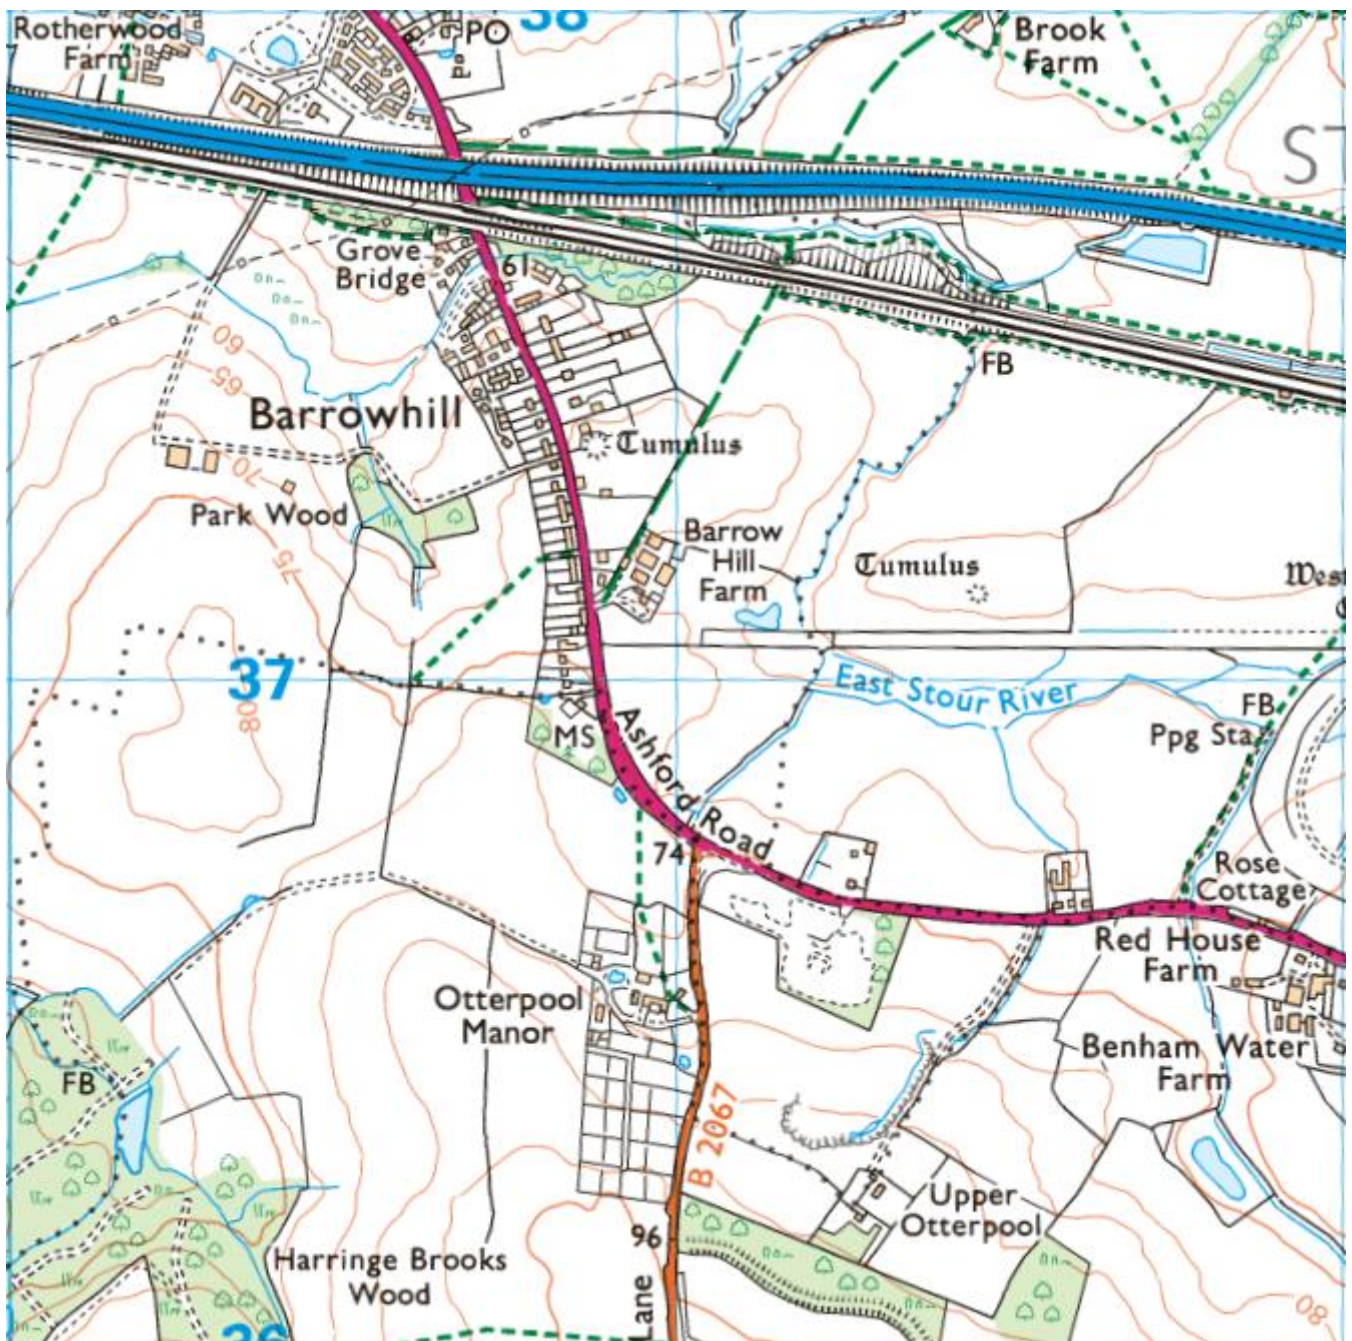

(Barrowhill, Otterpool and East Stour River)

Introduction

The tetrad TR13 D is an area of mostly farmland with several small waterways, of which the East Stour River is the most significant, and there are four small lakes (though none are publicly accessible), the most northerly of which is bordered by *Phragmites*. Other features of interest include a belt of trees running across the northern limit of the former Lympe Airfield (in the extreme south edge of the tetrad), part of Harringe Brooks Wood (which has no public access), the disused (Otterpool) quarry workings and the westernmost extent of the former Folkestone Racecourse. The northern half of the tetrad is crossed by the major transport links of the M20 and the railway, whilst the Ashford Road (A20), runs approximately diagonally across.

Habitats and birds

Whilst there are no sites of particular ornithological significance within the area it is not without interest. A variety of farmland birds have bred, including Kestrel, Stock Dove, Skylark, Chiffchaff, Blackcap, Lesser Whitethroat, Yellowhammer, and possibly Buzzard, Yellow Wagtail and Meadow Pipit. Two rapidly declining species, Turtle Dove and Spotted Flycatcher, also probably bred during the *2007-11 Bird Atlas*. The *Phragmites* at the most northerly lake support breeding Reed Warbler and Reed Bunting.

In winter Fieldfare and Redwing may be found in the fields, whilst the streams have attracted Little Egret, Snipe and, Grey Wagtail, with Siskin and occasionally Lesser Redpoll in the alders along the East Stour River. Corn Bunting may be present if winter stubble is left and Red Kite, Peregrine, Merlin and Waxwing have also occurred.

Access and parking

Much of the southern half of tetrad is inaccessible though there is a footpath that runs north from Rose Cottage (where it is possible to park on the roadside) alongside the western edge of Folkestone Racecourse. It is possible to continue on this path into TR13 I and join the footpath which runs along the southern side of the railway.

There is a bridleway which runs north from Sellindge (where it is also possible to park) and this crosses under the railway to give access to the land between there and the M20.

In order to be able to walk along one side of the railway and return along the other it would be necessary to continue to the over-bridge at Stone Street, near Westenhanger.

There is also a footpath alongside the northern (coast-bound) carriageway of the M20 which originates at Stone Street, near Westenhanger, and several footpaths running from Stanford or Sellindge which allow access to the area around Brook Farm. The Folkestone to Ashford bus route runs along the A20 through the tetrad.

Bird species diversity

The fairly limited range of habitats and restricted access has produced a fairly low overall total of 79 species within the tetrad, which ranks as the 29th richest in diversity amongst the 31 local tetrads as the table below demonstrates. The number of breeding and wintering species relate to those recorded in the 2007-2013 BTO/KOS atlas fieldwork.

	Total	Rank/31
Breeding species	44	22 nd
Wintering species	56	23 rd
Species recorded	79	29 th

The full list of species that have been recorded is provided as Appendix 1.

Other Natural History

Probably of most interest among the other taxon is the Great Crested Newt which has been recorded in the pond at Otterpool Manor Farm.

During a large influx of the species in May 2009, a total of 120 Painted Lady butterflies were counted in the Barrowhill area.

A number of insect groups in particular have received very little attention here and there is clear potential to extend several of the lists that are given below. The moth list is primarily derived from a single night of trapping on the 11th July 2019 which produced 108 species, including *Orthotelia sparganella* (Reed Fanner), *Bisigna procerella* (Kent Tubic), *Catoptria falsella* (Chequered Grass-veneer), Large Emerald, Black Arches, Round-winged Muslin, Beautiful Hook-tip and Dingy Shears.

The former workings at Otterpool Quarry have been designated as an SSSI due to their geological significance. The quarry shows the finest section through the Cretaceous Hythe Beds in East Kent and is of particular significance in showing the contact between this formation and the Sandgate Beds above. The Hythe Beds are especially fossiliferous at this locality and are unusually rich in certain ammonites. It is a key stratigraphic locality, both for the formations it exposes and its correlatable ammonite faunas.

A list of all species recorded in the tetrad is provided below in Appendix 2.

General History

There is a Tumulus (a mound of earth raised over an Anglo-Saxon grave) within the tetrad, near Burnbrae Farm. It is located within a field used for growing arable crops and little is visible of it from the ground but aerial images show it clearly.

There are two grade 2 listed farmhouses in the tetrad – the one Upper Otterpool dating from the late 16th or early 17th century and the other at Otterpool Manor from the 17th century or earlier.
