

At Steinbock Farm, we really enjoy experiencing the subtle differences in the flavor of the honey that each colony has created in a given harvest, and the color stickers are simply a way to differentiate.

Also, we are careful in selecting places to pasture our honey. Our farm is miles from any commercial farming operations and population centers. Here’s a little more information about where the bees who produced the honey in your jar have been foraging!

Date Label	Color	Pasture Location(s)
