

Es PICKER

Are you in a marginal area?

**Fed up with producing
immature maize?**

Drilling late or double cropping?

Need to drill wheat in September?

YOU NEED Es PICKER:

-  **Stable high yielding group 10**
-  **Better cob ripeness than
Augustus and Trooper**
-  **Best combination of yield
and true earliness**
-  **Suitable for difficult sites or late
sowing**
-  **Best early vigour for fast
establishment**

Grainseed Ltd

Es PICKER

EXCELLENT COB MATURITY FOR MARGINAL AREAS

Cob Ripeness

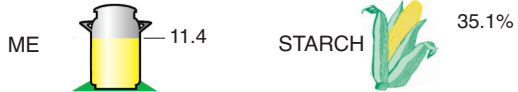

Very early maturing grain on a thin spindle. Distinctive long indeterminate cob. Better cob maturity in marginal areas than Augustus or Trooper.

Maturity Group

Es Picker the ultra early with the best combination of grain maturity and plant dry down.

Quality & Digestibility

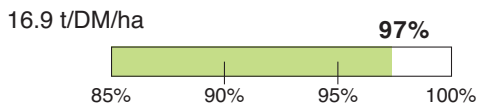

Above average ME on a more digestible plant = 193,000 MJ/ha. Above average starch yields in maturity Group 10.

Plant Description

Very good vigour in the spring. Tall erect plant. Improved quality in a very early variety due to even plant dry down and good cob maturity.

Yield

Sow at 42,500 to 45,000 seeds per acre (105,000 to 111,000 seeds/ha) to maximise output. High yielding group 10 variety. Good combination of yield and maturity. Very reliable performance in field.
