WORK

SUG

WINTER

A HISTORY OF MAGNIFICENT ACHIEVEMENT AND INNOVATION...

1907

Wells Lamont introduces first glove, a canvas work glove

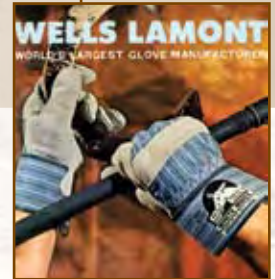

1928

Wells Lamont introduces the original White Mule® Leather palm glove

1951

Women's garden gloves are introduced to the market; pioneered by Wells Lamont

1953

Wells Lamont becomes the #1 glove manufacturer in the industry

1983

Wells Lamont introduces the patented Perma Hook method of tagging gloves; still in use today

1984

Our first disposable gloves for retail are introduced

1990

Just Like Dad's™ kid's work gloves are introduced

1993

Wells Lamont is first to introduce Work Gloves for women, designed and fitted specifically for women's hands

BRAND EVOLUTION

WELLS LAMONT

The beginning...

COMPARE... *Buy Wells Lamont® Gloves*

1966

WELLS LAMONT

1977

100 Years

is a major achievement in any business, attributable to the people and the innovation that make it happen. • Wells Lamont... continually recognized as *the* premium manufacturer of quality work gloves. • And like the electronic age, glove technology is no different. Wells Lamont has introduced more innovation and products in the last 25 years than all the previous 75 years.

1955

Merchandising displays are introduced; a first for the glove industry. And another first; tagged gloves with a unique triangle die cut for display hanging

1979

Wearpower® blended canvas & jersey gloves for longer wear are first introduced by Wells Lamont

1981

Wells Lamont forms joint venture with Austins Marmon Ltd. of Hong Kong; establishing true manufacturing in the Far East

1982

Wells Lamont introduces Grips® patented precurved leather gloves; still the best known leather glove brand today

2000

Machine washable leather gloves are first introduced to the work glove industry.

2003

MechPro,™ affordable, dependable, mechanic's gloves of synthetic leather arrive. Within three years they become a major product category

2004

SUG® Sport Utility Gloves are introduced; the first major change to basic work glove design in 50 years

2005

StormZone™ reflective winter casual gloves are introduced. Be seen! Be Safe!

2006

Wells Lamont launches High Visibility Gloves & Gear in safety green

1980

1997

2001...

First introduced less than four years ago,

SUG's have emerged as a breakthrough category quickly moving consumers up from the lesser cost traditional gloves. Simply, the bold and exciting new approach that went way beyond plain old work gloves, worked. • Having evolved from the combination of a tired old work glove category and the expertise of our sports glove technology and influence, **SUG's** livened up the work glove category injecting fun, color and improved designs all with noticeable benefits. • **SUG's** combination of new materials and form fitting, slimmer, tapered designs proved that there is an entire consumer base willing and wanting to buy an affordable glove that does not forget its Work Hard heritage, yet seeks its Play Hard image.

• And why not - they look and feel better than anything you've ever tried before, the least that you would expect from Wells Lamont... America's Best Selling Gloves!

842

Dotted Jersey

- **Wearpower™** jersey fabric outwears 100% cotton 3 to 1

------	------------------------	---------

Assorted color pack - 6 black, 1 each royal blue / green / gray / orange / red / yellow

Wells Lamont MechPro™ gloves are designed for performance without being overpriced.

MechPro™ Features That Work:

- DuraTech B™ synthetic suede leathers that are stronger and more abrasion resistant than competitive brands. And machine washable, too!

- Pinched fingertip designs on selected styles improve comfort and tactility because there is less seam material to get in the way.

- Patented KwikPull™ finger removal assists for easy on and off on fingerless designs.

- Stretch panels in the finger crotches on selected styles. These stretch “gussets” reduce seam feel and improve comfort and flexibility.

MechPro™ Cold Weather

Waterproof Windproof

- Machine washable **DuraTech B™** synthetic suede leather palm with synthetic grain leather palm patching
- Precurved pattern reduces hand fatigue and improves fit and comfort
- Spandex back with neoprene knuckle strap for fit and flexibility
- Slip-on style
- Neoprene cuff with synthetic leather pull tab
- Lined with 165-gram fleece and **Microlar 3™** waterproof, windproof breathable insert

LEATHER GLOVE GUIDE

Commonly used glove leather is described next to each magnified (8x) photo of an actual leather swatch.

All work glove leather is not the same, and neither are all leather work gloves. Each leather and leather glove have their own characteristics. What we have illustrated is a quick series of lessons that define these characteristics and where and how they be best used.

Grain Pigskin • Pigskin is unmatched for its abrasion resistance, and breathability (note distinctive hair follicles that contribute to this). Tanned correctly, this leather is very flexible, and moisture and puncture resistant.

Grain Deerskin • Prized for its flexibility, softness and insulating ability, deerskin is surprisingly strong and moisture resistant. Because deer are not raised for commercial use, there can be large quality and consistency variances.

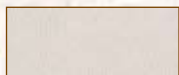

Split Deerskin • The most flexible of all work glove leathers, deersplit is not as available as grain because of the small hide size and the fact that deer raised in warm climates do not produce thick enough hides. Because it tends to be thinner, an excellent choice for insulated gloves.

Grain Elkskin • Very similar to grain deerskin, elkskin can frequently have a distinctive “pebbled” appearance, characterized by small bumps on the surface. Elkskin can come in very thick hides, which increase its insulation effectiveness and wearability. Again, wide quality variances occur.

Grain Cowhide • A good all-around work glove leather. The most commonly used grain leather because of its broad availability. The side shown here reflects uniformity, both in color and surface, a hallmark of this leather.

Grain Goatskin • Densely packed fibers allow this leather to be thin, but retain much of its strength. Since the hides can be very small, quality variances are common, as a single pair of gloves can contain side, shoulder and belly parts.

Split Cowhide • The most used, cost effective and versatile of work glove leathers. The pearl side split shown here clearly shows high fiber density responsible for this leather’s high abrasion resistance and strength.

How a leather hide is used

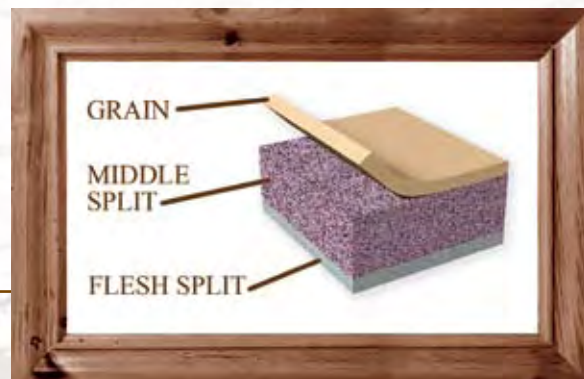

Our leather gloves are made from carefully selected hides to our exacting specifications, most in our own tanneries. In the processing of most hides, especially those from larger animals, it is customary to cut them into two or more smaller pieces for easier handling. The most common pieces used in glove leather are the belly, side and shoulder pieces.

Because leather hides are too thick for commercial use, they must then be cut into layers. A hide is divided into three layers. The smooth or outer layer, or grain side, is used for better gloves where look and dexterity is important.

The bottom layer, or flesh split side with the feel of suede is very strong, and is used mostly in leather palm styles, but also in full leather gloves.

We do not use the middle split layer. While it can look like flesh split, there is no tensile strength to this leather, resulting in poor performing gloves.

All Wells Lamont leather is graded and separated into A, B, or C grades. Wells Lamont uses primarily A and B grades for our best gloves, B and C grades for our better gloves, ending on the type of leather.

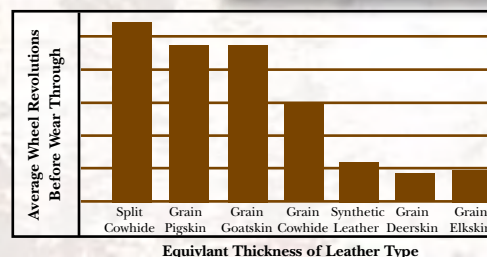

Leather Wear and Performance

Abrasion resistance is most critical to the longevity of a work glove, since constant rubbing caused by repetitive motion is by far the most common force encountered. That's why we test our leathers for performance characteristics as illustrated in the chart below. For true abrasion comparisons, equivalent weights or thickness of leather need to be tested.

Many leather gloves, in order to achieve greater tactile sensitivity or flexibility, are made from a "thinner" or "shaved" leather thereby reducing their abrasion performance. There can be many misconceptions regarding leather performance when leather thickness is not considered. Gloves are routinely made from different thickness leather in order to satisfy specific glove performance requirements at the expense of abrasion ability.

Note that occasional scratches or scars are your assurance that the leather is a natural product. These slight variances in no way affect the wearability of the gloves.

**Teledyne Tabor
Wheel Abrasion
Testing
(5 samples)**

Common work glove leather physical performance characteristics: (for equivalent thicknesses of natural leather)

NOTE: The table below is meant to give you a general indication of how various types of leather perform in relation to each other during standard testing. While all leather is washable to some degree, our comments below refer to our proprietary machine washable leather tanning formula.

Abrasion Leather Type	Puncture Resistance	Tensile Resistance	Strength	Breathability	Tactile Flexibility	Insulation Sensitivity	Moisture Ability	Relative Resistance	Cost
Grain Pigskin	Best	High	Good	Best	High	High	Low	Best	Low
Grain Cowhide	High	Best	High	Fair	Good	Good	Good	Fair	Mid-range
Split Cowhide	High	Best	High	Fair	Fair	Fair	Good	Fair	Low
Grain Deerskin	Fair	Fair	Best	Fair	High	High	Best	Better	High
Split Deerskin	Fair	Fair	Fair	High	Best	Best	Good	Good	Mid-range
Grain Goatskin	High	High	High	Fair	High	High	Low	Good	Mid-range
Grain Elkskin	Fair	Fair	High	Fair	High	Good	High	Better	High
Machine Washable Leather	Slightly less	Slightly less	Same	Same	More	More	Same	Most	High

Material recommendations for common work glove applications: (for equivalent thicknesses of natural leather)

Applications	Grain Pigskin	Grain Cowhide	Split Cowhide	Grain Deer/Elkskin	Grain Goatskin	Synthetic Leathers	Coated Knits
Framing, carpentry, roofing	Good	Best	Fair	Good	Good	Good	Fair
Maintenance, dry surface cleaning	Better	Good	Good	Best	Better	Good	Fair
Demolition, rough labor	Good	Better	Best	Fair	Fair	Fair	Good
Equipment operation	Good	Good	Fair	Best	Better	Better	Fair
Heavy machine operation	Good	Better	Best	Good	Good	Fair	Fair
Landscaping	Best	Good	Better	Fair	Good	Good	Good
Hand tools, pistol grips, assembly	Good	Good	Fair	Better	Better	Best	Fair
Parcel delivery, warehouse work	Good	Better	Good	Good	Better	Good	Best
Transportation	Good	Good	Fair	Best	Good	Better	Fair
Low abrasion operations	Good	Fair	Fair	Good	Better	Best	Fair
High abrasion operations	Better	Good	Best	Fair	Better	Good	Good
Fencing	Good	Better	Best	Fair	Good	Fair	Fair
Rigging	Better	Good	Good	Good	Best	Better	Fair
Materials handling	Better	Better	Better	Fair	Good	Good	Best

NOTE: Recommendations shown above are for better types of work gloves. Jersey, canvas, and other textile gloves are suitable for a very broad range of lighter duty tasks. For recommended uses of liquidproof and chemical resistant gloves, please refer to tables on pages 34 - 35

LINED LEATHER

Wells Lamont Glove Within a Glove

All our gloves have full linings, but our better lined leather and leather palm gloves feature a fully wrapped glove within a glove. • Insulation is wrapped completely around the fingers to minimize heat loss. This method costs more but delivers the best Wells Lamont quality.

3211

Wells Lamont Leather

- Like your favorite tool, Wells Lamont gloves are like an old friend... dependable, and everything you'd expect when needed.
- Wells Lamont began making full leather gloves before World War I and has never stopped.

Back in the 1950's,

Wells Lamont gained real success with the Brotherhood® brand of full leather gloves of cowhide, pigskin, napa goatskin and soft and supple deerskin leather. Original designs included the traditional gunn cut pattern, still in use today. The straight thumb of that era has since been replaced by the more comfortable, better fitting keystone thumb. Gloves finished then with cloth binding are today finished with higher quality genuine leather binding.

Grips®, the most recognized brand

... in leather work gloves today, was first introduced in 1982.

Originally designed as an exclusively precurved glove, the name today has evolved to include all Wells Lamont full leather gloves. Grips® stands unparalleled for high quality in leather glove performance.

Wells Lamont White Mule®

W.O. Wells, founder of Wells Lamont, invented and named the White Mule® leather palm work glove in 1928. 50 years later, it had become the most popular and best recognized work glove in America. Even today, the Original White Mule® leather palm glove is our absolute toughest leather palm glove.

JERSEY GLOVES

Our Wearpower® Jersey is better!

Our Wearpower® polyester/cotton blend jersey fabrics have been ASTM tested to show that they outwear equal weight 100% cotton jersey by 3 to 1 in tensile strength. More tensile strength means better seam strength, the most common jersey glove failure.

2150

Cold Weather Jersey

- **Wearpower®** polyester/cotton blend jersey
- Fleece lining with foam insulation
- **Waren™** thumb

Overedged Knit Wrists

We take the time and expense to overedge our better knit wrist chore and canvas styles. • Pull tests show that overedged products have up to 40% more tensile strength at the wrist. • Another Wells Lamont quality feature.

CANVAS GLOVES

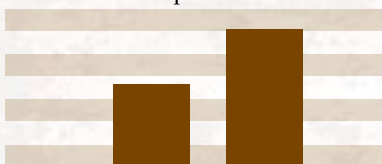

Wells Lamont pioneered the original "Staple Ticket" on gloves over 50 years ago.

Wearpower Plus™ Canvas

We've taken our Wearpower® canvas and made it better. We've gone to a higher count weave using finer yarns. What this means is that our canvas gloves will now wear better than before; more than 70% better in tensile strength, and nearly 40% better against abrasion... and why we call it Wearpower Plus™.

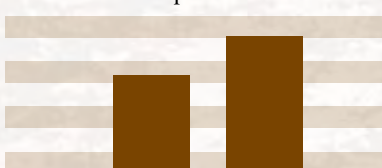

Tensile Strength Test

70% improvement

Abrasion Test

39% improvement

Wearpower Plus™ Hob Nob®

530XL	6 pr. Extra Large	04544-8

Palm dipped knit gloves...

A growing category in the work glove arena. Known for their form-fitted design, great grip and wear, and affordable pricing. • Ideal for a wide variety of uses: plumbing, electrical, brick, paving and stone work, material handling and general purpose use • The level of dexterity is determined by the shell knit; 13 cut for better dexterity, 10 cut for heavier duty use. The coating compounds determine the level of wear and quality, with nitrile being the best, and latex the most common, good for all around use.

533

Premium Latex

Wells Lamont for Women

Since 1993 Wells Lamont gloves for women have been designed in appealing colors that aren't too feminine for the workplace, and are sized right for women's hands, offering the same protection and quality as our men's work gloves. • For additional "smaller hands" sizes, look for our small sizes throughout our line. Our small sized work gloves carry bold hang tags that emphasize "for smaller hands".

Physical Performance Guide

Latex Rubber Latex, or natural rubber, has excellent abrasion, cut and tear resistance as well as outstanding grip and temperature resistance from 0-300 degrees F. • However, natural rubber has poor flame resistance. It is not recommended where resistance to oil, grease or petroleum solvents is required. • Latex will withstand all liquids that mix with water, making unsupported types especially suited for general household use. Heavier versions will resist common furniture strippers without sacrificing grip or tactile sensitivity. • Coated versions have crinkle finishes, making them the best choice for handling sharp-edged materials like glass and sheet metal, as well as lumber, stones and concrete.

PVC PVC provides excellent economical resistance to most oils, acids, fats, caustics and petroleum hydrocarbons in addition to outstanding abrasion resistance in its heavier forms. • PVC gloves are useful in alcohols and glycol ethers, but not aldehydes, ketones, aromatic hydrocarbons, halogen compounds, heterocyclic compounds or nitro compounds. PVC performs well in temperatures ranging from 25-150 degrees F. • Our disposable gloves will provide only short term protection. They are best suited for painting, hair care, food handling and dish washing.

Neoprene Neoprene protects from a broad range of chemicals and is one of the best coatings for strong alkalies and acids. Neoprene has excellent tactile strength and resembles natural latex in flexibility, but is much more chemical resistant and impermeable to gases, vapor and moisture. • Neoprene performs well in temperatures from 0-300 degrees F, resists herbicides and pesticides, common farm chemicals; oils and a very broad range of alkalies and acids in degreasing. • Petrochemical, metal fabrication, plating, galvanizing and general material handling are suitable applications for neoprene in its coated form.

Nitrile A synthetic rubber that provides excellent resistance to a very wide range of solvents and hazardous chemicals; also resists punctures, cuts, snags and abrasion. Nitrile protects against oils, greases, acids, caustics, herbicides, pesticides, kerosene, naphtha, alcohols, turpentine, tung oil and many petroleum products. • Nitrile gloves have better cut and abrasion resistance than neoprene and PVC gloves, and are considered an excellent general-purpose product. Nitrile functions well in temperatures ranging from 25-300 degrees F. • Unsupported applications include common farm and garden protection, industrial painting, cleaning and maintenance, and automotive use. • Nitrile gloves provides outstanding flexibility and abrasion-resistance.

Look for our identifying use icons.

These can help you sort your department needs:

Liquidproof and chemical use

Paint and refinishing use

General cleaning use

DEGRADATION RATING:

E - Excellent / G - Good / F - Fair / P - Poor / NR - Not Recommended / * - No Data
TEST DATA IS INTENDED AS A GUIDE ONLY. IT IS RECOMMENDED THAT YOU PERFORM
YOUR OWN EVALUATION BASED ON ACTUAL WORKING CONDITIONS.

Nitrile

- Best protection for oil-based paints, stains, turpentine, tung oil and related products
- Best for puncture and tear resistance of all disposable gloves
- **Latex free** for those with allergic reactions to latex
- 5-mil
- Rolled cuff
- Lightly powdered for easy on and off
- Ambidextrous - fits either hand

Vinyl

- Better protection for water and oil-based paints and stains
- Looser fitting than latex, provides more air flow for better comfort
- **Latex free** for those with allergic reactions to latex
- 5-mil
- Rolled cuff
- Lightly powdered for easy on and off
- Ambidextrous - fits either hand

We first introduced

the Wells Lamont disposable gloves in 1983 with our popular bucket of 300 vinyl gloves. • Today Wells Lamont offers a complete line of SureGard™ disposables from the best performance with nitrile to the ever popular and economical latex.

Latex

- Good protection for water-based paints and stains, and household chemicals
- Good elasticity for that second skin fit and feel
- Excellent choice for household cleaning
- 5-mil
- Rolled cuff
- Lightly powdered for easy on and off
- Ambidextrous - fits either hand

Heavy Duty Vinyl

- In heavy duty form, more resistant to heavier duty cleaning chemicals than 5-mil vinyl
- Latex free for those with allergic reactions to latex
- 6-mil green
- Rolled cuff
- Lightly powdered
- Ambidextrous - fits either hand
