GCE AS MARKING SCHEME

SUMMER 2016

CHEMISTRY - NEW AS UNIT 2 2410U20-1

© WJEC CBAC Ltd.

INTRODUCTION

This marking scheme was used by WJEC for the 2016 examination. It was finalised after detailed discussion at examiners' conferences by all the examiners involved in the assessment. The conference was held shortly after the paper was taken so that reference could be made to the full range of candidates' responses, with photocopied scripts forming the basis of discussion. The aim of the conference was to ensure that the marking scheme was interpreted and applied in the same way by all examiners.

It is hoped that this information will be of assistance to centres but it is recognised at the same time that, without the benefit of participation in the examiners' conference, teachers may have different views on certain matters of detail or interpretation.

WJEC regrets that it cannot enter into any discussion or correspondence about this marking scheme.

GCE CHEMISTRY

SUMMER 2016 MARK SCHEME

AS UNIT 2 ENERGY, RATE AND CHEMISTRY OF CARBON COMPOUNDS

MARK SCHEME

GENERAL INSTRUCTIONS

Recording of marks

Examiners must mark in red ink.

One tick must equate to one mark, apart from extended response questions where a level of response mark scheme is applied.

Question totals should be written in the box at the end of the question.

Question totals should be entered onto the grid on the front cover and these should be added to give the script total for each candidate.

Extended response questions

A level of response mark scheme is applied. The complete response should be read in order to establish the most appropriate band. Award the higher mark if there is a good match with content and communication criteria. Award the lower mark if either content or communication barely meets the criteria.

Marking rules

All work should be seen to have been marked.

Marking schemes will indicate when explicit working is deemed to be a necessary part of a correct answer.

Crossed out responses not replaced should be marked.

Marking abbreviations

The following may be used in marking schemes or in the marking of scripts to indicate reasons for the marks awarded.

cao = correct answer only ecf = error carried forward bod = benefit of doubt

Credit should be awarded for correct and relevant alternative responses which are not recorded in the mark scheme.

Section A

| | 0 | tion | Marking dataila | | | Marks a | available | | |
|----|------------|------|--|-----|-----|---------|-----------|-------|------|
| | Ques | uon | Marking details | AO1 | AO2 | AO3 | Total | Maths | Prac |
| 1. | (a) | | 3-chloro-2,4-dimethylpentanoic acid | | 1 | | 1 | | |
| | <i>(b)</i> | | СООН | | 1 | | 1 | | |
| 2. | | | Sketch graph to show products at higher energy than reactants (1) E_a and ΔH correct (1) | | 2 | | 2 | | |
| 3. | | | $\begin{array}{cccccccccccccccccccccccccccccccccccc$ | | 1 | | 1 | | |

| | Oursetiers | Mauking dataila | | | Marks a | vailable | | |
|----|------------|--|-----|-----|---------|----------|-------|------|
| | Question | Marking details | AO1 | AO2 | AO3 | Total | Maths | Prac |
| 4. | | Any two of following for (1) each | | | | | | |
| | | Use a colorimeter to measure colour changes <u>with time</u> | | | | | | |
| | | Use a pH meter to measure pH changes <u>with time</u> | | | | | | |
| | | Use a gas syringe / collect gas over water to measure changes in volume with time | | 2 | | 2 | | 2 |
| | | Use a balance to measure mass changes <u>with time</u> | | | | | | |
| | | Award (1) for one correct method but no mention of time | | | | | | |
| 5. | (a) | Presence of a (carbon to carbon) double bond | 1 | | | 1 | | |
| | (b) | No – because two of the groups on one of the double bonded carbon atoms are the same | | 1 | | 1 | | |
| 6. | | $CuO + 2HCOOH \rightarrow (HCOO)_2 Cu + H_2O$ | | 1 | | 1 | | |
| | | (ignore state symbols) | | | | | | |
| | | Section A total | 1 | 9 | 0 | 10 | 0 | 2 |

Section B

| | Question | Mayking dataila | Marks available | | | | | | | |
|----|----------|---|-----------------|-----|-----|-------|-------|------|--|--|
| | Question | Marking details | AO1 | AO2 | AO3 | Total | Maths | Prac | | |
| 7. | (a) | Diagram to show insulated / polystyrene container with reagents (1) | | | | | | | | |
| | | Lid (1) | | | | | | | | |
| | | Thermometer (1) | | 3 | | 3 | | 3 | | |
| | (b) | Energy = $25 \times 4.18 \times 14.5 = 1515 \text{ J}$ (1) | | | | | | | | |
| | | Moles Mg = $0.1/24.3 = 4.12 \times 10^{-3}$ (1) | | | | | | | | |
| | | $\Delta H = 1515/4.12 \times 10^{-3} = -368 \text{ kJmol}^{-1}$ (1) | | 3 | | 3 | 3 | | | |
| | | ecf posible | | | | | | | | |
| | (c) | Moles Mg = 8.23×10^{-3} (1) | | | | | | | | |
| | | Requires 1.64×10^{-2} moles HCl for all to react | | | | | | | | |
| | | Moles HCl = 5×10^{-3} i.e. not enough for a complete reaction (1) | | | 2 | 2 | | | | |
| | (d) | Maximum error in the one reading taken = 0.05 g (1) (Allow 0.1 g if clearly states that mass was measured using weighing by difference) | | | 1 | | | | | |
| | | Maximum % error = <u>0.05</u> × 100 = 50% (1) 0.1 | | 1 | | 2 | 1 | 1 | | |
| | (e) | Cannot measure ΔH – can only measure ΔT / no water / solution present to measure temperature change | | | 1 | 1 | | 1 | | |
| | | Question 7 total | 0 | 7 | 4 | 11 | 4 | 5 | | |

| | Ques | otion | Marking details | | | Marks a | vailable | | |
|----|---|-------|---|-----|-----|---------|----------|-------|------|
| | Que | Suon | | A01 | AO2 | AO3 | Total | Maths | Prac |
| 8. | (a) | (i) | Enthalpy / energy change when 1 mol of substance is burned (1) | | | | | | |
| | | | Completely / in excess oxygen under standard conditions (1) | 2 | | | 2 | | |
| | (ii) $C_2H_6 + 3\frac{1}{2}O_2 \rightarrow 2CO_2 + 3H_2O$ (1) | | | | | | | | |
| | | | Bonds broken 1(C—C) + $3\frac{1}{2}(O=O)$ + 6(C—H) = 2080.5 + 6(C—H) (1) | | | | | 1 | |
| | | | Bonds formed 4(C=O) + 6(O-H) = 5974 (1) | | | | | 1 | |
| | | | 2080.5 + 6(C—H) – 5974 = –1561 | | | | | | |
| | | | $(C-H) = 389 \text{ kJmol}^{-1}$ (1) | | 4 | | 4 | 1 | |
| | | | award (3) for cao | | | | | | |
| | | | ecf possible | | | | | | |
| | | (iii) | Average used since each individual bond will be in a different environment and therefore have a different strength (1) | | | 1 | 1 | | |

| 0 | estion | Marking details | Marks available | | | | | | |
|--------|--------|---|--|---|--|--|-------------------------------------|--------------------|--|
| Que | estion | Marking details | AO1 | AO2 | AO3 | Total | Maths | Prac | |
| 8. (b) | | Indicative content Correct in that energy produced per gram is 32.8 kJ from charcoal and 55.6 kJ from methane Both give CO ₂ on burning 1 mol of each fuel produces 1 mol of CO ₂ Wood for charcoal comes from (living) trees Methane comes from sources living millions of years ago / is a fossil fuel Charcoal is renewable / methane is non-renewable Trees take in CO ₂ in photosynthesis Trees release the same amount of CO ₂ on combustion that they took in during growth Charcoal burning is overall carbon neutral | | 1 | 5 | 6 | 1 | | |
| | | 5-6 marks Must calculate energy per gram for both fuels. The candidate constructs a relevant, coherent and logically structures content. A sustained and substantiated line of reasoning is evident a accurately throughout. 3- 4 marks Clear comparison of methane and charcoal. The candidate constructs a coherent account including many of the k is evident in the linking of key points and use of scientific conventions: 1-2 marks Main focus on only one of methane or charcoal. The candidate attempts to link at least two relevant points from the in and/or inclusion of irrelevant material. There is some evidence of ap 0 marks The candidate does not make any attempt or give an answer worthy | and scient acy eleme s and voc ndicative c propriate | ific conver nts of the abulary is | ntions and indicative generally Coherence | l vocabula content. sound. is limited | ry are use Some rea by omissi | ed soning on | |
| | | Question 8 total | 2 | 5 | 6 | 13 | 4 | 0 | |

| | Question | Marking details | | | Marks a | available | | |
|----|----------|---|-----|-----|---------|-----------|-------|------|
| | Question | | A01 | AO2 | AO3 | Total | Maths | Prac |
| 9. | (a) | Any five of following for (1) each Alkenes contain σ and π bonds σ bonds are formed from s-s orbital overlap / end-on orbital overlap π bonds are formed from sideways overlap of p orbitals / overlap above and below plane The π bond gives a region of high electron density This is susceptible to electrophilic attack/ attack by an electron deficient species | | | | | | |
| | | (This attack) leads to addition reactions | 5 | | | 5 | | |
| | (b) | Diagram to show Correct dipole on Br₂ (1) Two correct arrows (1) Formula of intermediate and arrow from lone pair or negative charge (1) Correct product (1) | 4 | | | 4 | | |
| | | Question 9 total | 9 | 0 | 0 | 9 | 0 | 0 |

| | 0 | otion | Marking dataila | | | Marks a | vailable | | |
|-----|-----|-------|---|-----|-----|---------|----------|-------|------|
| | Que | stion | Marking details | AO1 | AO2 | AO3 | Total | Maths | Prac |
| 10. | (a) | (i) | Equation with displayed or structural formulae e.g. | | | | | | |
| | | | $\begin{array}{rcl} CH_3CH(CH_3)CHCICH_2CH_3 \ \ \text{+} \ \ NaOH \ \rightarrow \\ CH_3CH(CH_3)CHOHCH_2CH_3 \ \ \text{+} \ \ NaCI \end{array}$ | | | | | | |
| | | | $\begin{array}{rcl} CH_3CH(CH_3)CHCICH_2CH_3 & \texttt{+} & OH^- \rightarrow \\ & CH_3CH(CH_3)CHOHCH_2CH_3 & \texttt{+} & CI^- \end{array}$ | | 1 | | 1 | | |
| | | (ii) | Nucleophilic substitution | 1 | | | 1 | | |
| | | (iii) | Neutralise hydroxide with nitric acid and add aqueous silver nitrate (1) | | | | | | |
| | | | White precipitate forms (1) | 2 | | | 2 | | 2 |
| | | | Accept heat with acidified dichromate (1) orange to green (1) | | | | | | |
| | (b) | (i) | Rate α concentration of halogenoalkane with explanation e.g. concentration doubles, rate doubles (1) | | | | | 1 | |
| | | | Rate not affected by concentration of OH^- (1) | | | 2 | 2 | | |
| | | (ii) | Rate would be faster because C—X bond needs to be broken (1) | | | | | | |
| | | | C—Br is weaker than C—Cl / takes less energy to break (1) | | | | | | |
| | | | This outweighs effect of greater dipole in C—CI / chlorine being more electronegative (1) | 3 | | | 3 | | |
| | | | Question 10 total | 6 | 1 | 2 | 9 | 1 | 2 |

| | 0 | otion | Marking dataila | | | Marks a | available | | |
|-----|-----|-------|---|-----|-----|---------|-----------|-------|------|
| | Que | stion | Marking details | AO1 | AO2 | AO3 | Total | Maths | Prac |
| 11. | (a) | (i) | Labels on diagram to show vertical condenser (unsealed at top) (1) | | | | | | |
| | | | Water in and out of condenser in correct direction (1) | | | | | | |
| | | | Heat source below flask with reagents (1) | 3 | | | 3 | | 3 |
| | | (ii) | Liquid evaporates, vapour goes into condenser, cools and goes back to liquid / condenses | 1 | | | 1 | | 1 |
| | | (iii) | Any of following for (1) The reaction is slow Allows time for equilibrium to be established Stops reactants / products boiling away | | | 1 | 1 | | 1 |
| | | (iv) | Catalyst/ dehydrating agent | 1 | | | 1 | | |
| | (b) | (i) | Fractional distillation (1) | 1 | | | 1 | | 1 |
| | | (ii) | Moles of ethanoic acid = 0.05 and moles of methanol = 0.04 (1) Theoretical yield of methyl ethanoate = $0.04 \times 74 = 2.96$ g (1) % of theoretical yield = $\frac{1.18}{2.96} \times 100 = 40$ % (1) | | 3 | | 3 | 3 | |
| | | | ecf possible | | | | | | |
