- Installation Service Management
- International Experience
- Logistics Support
- Multiple Fortune 500 Clients
- On-Site Material Warehousing
- Project Management
- Prototype Development
- Proven Store Fixture Expertise

COMPANY OVERVIEW

Wood Technologies is a woman-owned business enterprise operating a custom millwork facility with over 35 years of expertise in the design, integration, and manufacturing of commercial casework/ furniture and retail store fixtures. We provide a comprehensive, cost effective approach to serving the unique needs of companies that want to stand-out from their competition. Those companies have included mid-size regional businesses all the way to multiple companies in the Fortune 500 list of national retailers and commercial organizations. Our skilled team of professional craftsman are experts in producing site-specific millwork solutions to complete your project as required. Our Indiana based facility can accommodate high-volume demand production, as well as detailed custom projects, while maintaining lean manufacturing standards.

DIFFERENTIATORS

Wood Technologies is a privately owned corporation comprised of an experienced and open-minded management staff that welcomes new concepts and encourages the creativity of our clients. Building this culture has helped our organization to experience continued growth and increase profitability. We operate a completely self-owned and sustained production and warehousing facility headquartered in Grabill, IN that gives us the capability to support both large and small customized projects from conception and design of prototypes to the oversight and support of contractor installation. We keep all facets of design, manufacturing, finishing solutions, and warehousing in-house which gives our team a discriminating advantage over other millwork service providers.

MANUFACTURING CAPABILITIES

Our manufacturing facility is designed to accommodate large production demands, while successfully meeting aggressive timelines for multiple projects throughout the U.S. simultaneously. We maintain the highest level of quality in the assembling, painting, drying, testing, and packaging of each and every furnishing and fixture that leaves our facility. Our engineers and technicians have implemented streamlined processes and procedures to allow increased efficiency in our manufacturing operations. These new processes now give us the ability to meet the ever-increasing requirements within the custom millwork industry far into the future.

CAPABILITIES

IN-DEPTH CAPABILITIES

Wood Technologies focuses on providing our clients the latest millwork design concepts, comprised of elegance, sophistication and quality. We pride ourselves on successfully supporting a diverse spectrum of clients ranging from fortune 500 hundred companies that require large scale manufacturing projects with short lead demands, to unique and complex customized designs that provide a desired level of decorum. Our design and engineering team has the ability to support projects from inception to installation, working closely with architecture firms at the initial stage of design by providing prototypes utilizing element samples and 3D modeling, for review and validation, to obtain finished design prints and executing manufacturing products exactly to spec.

MANUFACTURING WAREHOUSING AND LOGISTICS

We understand the need for having our client's product manufactured quickly. Supporting aggressive timelines requires having material on-hand, with the capability to deliver our finished product quickly and efficiently. To insure we are able to support our customer's timeline requirements, we've established two self-owned facilities totaling over an impressive 100,000 square feet with 75 fully trained and dedicated employees to facilitate our manufacturing operations, and warehousing of raw products. Our material handlers maintain raw stock levels and manage real time re-order points to insure we are ready to meet the need of any demand that may arise. In conjunction with maintaining high stock levels, we have the ability to ship our finished product to any location that our client requests, saving time and additional project costs.

LARGE SCALE PAST PERFORMANCE EXAMPLE

American Eagle: This large scale production was executed by manufacturing retail furniture elements in conjunction with metal accents and delivering the units to over 500 different store locations, while successfully meeting all project deadlines.

Bed Bath and Beyond: This seven day project consisted of manufacturing store roll outs for 350 separate locations, with 67 truckloads to drop ship on schedule.
