

Medical Services

One of the main goals of our functional restoration program is to decrease the individual's over-reliance upon continuing medical services. Therefore, our physician's involvement within our interdisciplinary program is primarily consultative in nature. Our physician coordinates care with the patient's attending physician, addresses emergent medical issues, prescribes injury-related medications, and directs tapering of pain medications, as needed. Upon completion of the program, the staff physician provides recommendations to the patient's attending physician for follow-up planning.
