

Stockport Parish Church [St Mary's in the Marketplace]

Phase 6 (Week 17)

All quiet at this end of the compound on a lovely sunny afternoon – so where is everyone?

Well there is a clue by checking the vehicles in the car park – and behold our Electrical Contractors are indeed on site. At least Mike is, seen here sorting out some of the new cabling in

the Rector's Vestry.

There is quite a lot of work to be completed with new electrical sockets to be fitted, cabling for the new lighting and of course a modern distribution board to serve that part of the building and which will, as far as possible, be hidden away out of sight!

To arrive shortly, the new fire surround, the new light fittings and return of the fully restored doors. The installation of the radiators will ensure that we can be assured of being nice and warm next winter when everything is connected and running.

The problem with the plumbing to the radiator in the Heritage Centre has also been resolved so it really is all systems go for a fully operational heating system at that end of the building.

(centre) with Paul from Lambert Walker (left) and Phil Griffiths (right) doing some vital measuring up.

(below right).

Remaining at ground level (although work continues on the roof of the vestries) our Architect (John Prichard) has been asked to give his opinion of the fixings to be used for the "Dimalow" panorama to be displayed in the Tower. Shown here (below left unpacking one of the actual prints) will be back next week with his own team to check the details the twelve prints. Plans will continue for an appropriate inscription to be placed within the stonework to record the 2006-2015 Restoration and Conservation works to the Tower, Vestries and Re-ordering of the Interior. Isobel and John read through Roger's proposed wording
