HOW TO FINISH A WHITE PRIMED DOOR	73

WHITE PRIMED DOORS

WHITE PRIMED DOORS allow you create a relaxing and classical finish to your home. These doors have laminated solid timber stiles for stability and MDF cover panels for a smooth consistent finish. The white primed finish provides a good base for finishing coats. White primed engineered doors achieve a smoother finish than traditional timber doors and eliminate the transfer of wood grain.

EXCLUSIVE GREY RANGE

EXCLUSIVE GRE RANGE In the world of interior design, there's no hotter colour than grey. Although it might sound dull, styling your home with grey tones instantly adds a classy and chic finish to any room, and even though it's been used for a few years now, grey is a trend that isn't going away.

We cannot guarantee the brochure colours will be an exact match to the actual product. Selection prior to fitting is the sole responsibility of the installer and end user.

EXCLUSIVE GREY RANGE The Milano and Torino Oak Grained Grey internal door is guaranteed to add character to your room and complement your existing interior decor. The intricate pattern of the Oak Grain creates a truly unique design, adding to the quality appearance of the door and creating a striking central feature. The raised inset feature of the Genona and Florence doors will add a designer look and style to any surroundings creating a look that is unique in todays market.

OAK DOORS

WHITE OAK DOORS remain very popular both in traditional and contemporary ranges due to their rich finish. White primed skirting and architrave finished to contrast with oak door is becoming a bespoke finish. The beauty of oak is that it can be finished with complementary oak mouldings or contrasted.

All Seadec oak doors come prefinished with high performance Crystal Shield

WALNUT DOORS

WALNUT DOORS Our walnut doors are constructed with a real wood veneer over solid wood stiles and rails. A solid 15mm slip on each side gives a rebating option. Pre-finished to a high standard, Seadec's walnut doors have the look and feel of pure quality. White primed skirting and architrave can be used to contrast with walnut doors and is becoming a popular bespoke finish. Alternatively it can be finished with matching complementary walnut mouldings.

DOOR SIZES & SPECS

If you are buying replacement doors, DO NOT measure the existing door. You must always base your measurements on the door frame.

Door width: Take three measurements inside the door frame - at the top, middle and bottom. The widest measurement determines the width of the door. Door height: Measure the inside of each vertical side of the frame. The longest length determines the height required. Remember to make allowance for any floor covering.

CARE AND INSTALLATION GUIDE

For fire doors please refer to their certification for fitting instructions.

BEFORE YOU START

Your Seadec door and accessories (frames, skirting & architrave) must be stored flat on a clean, dry and level surface, with level battens to allow the air to circulate. To allow your door and accessories to acclimatise to their environment, they should be left in the house, for at least 7 days, with the heating and environment regulated per installation guidelines below. Doors should be stored flat. Environmental and door moisture readings should be taken prior to hanging and recorded, to ensure that the doors and the environment are in correct. Failure to allow the doors to acclimatise may cause excessive expansion and contraction leading to splitting and warping and will void the guarantee.

Unfinished or primed doors must be sealed and painted immediately after hanging with at least three coats applied.

Seadec doors and accessories must not be installed into a house that is freshly plastered, tiled or painted, it is crucial that building is properly dried out and that heating and humidity in building are stable before doors or accessories are brought on site or fitted, please ensure the building meets with the moisture and temperature guidelines below. Should a door require alteration, cutting or planing, it must be immediately varnished with three coats, otherwise it will absorb moisture which can lead to problems such as warping or splitting. Seadec doors may be altered by up to 10mm off the top and bottom and up to 7mm on each side only. However, any alteration of a Seadec door will void the warranty. For Fire Door alterations, please consult the relevant fire certificate.

Where doors are manufactured with solid timber, there has to be a consideration that timber will adjust itself to the environment. **Therefore , please note that there is a BS standard of +/- 4mm of a bow tolerance on the length of a door.**

PACKAGING

Prior to removing the packaging, ensure that the doors, frames, skirting and architrave are the correct size and colour. Prior to removing from packaging, inspect each door, frame and piece of skirting and architrave in daylight for any visible faults or defects, also check the colour structure and finish. Once any Seadec product is removed from its packaging, it is deemed to be acceptable and cannot be returned for any visible faults or defects. Please note: Timber is a natural product and may show variations in colour or graining.

FRAMES

Ensure that the frames where the doors are being fitted into are plumb, and that the doors are not strained to fit into uneven framing. Fit 3 hinges on all doors at all times.

INSTALLATION AREA MOISTURE

The area of installation (the concrete floor and walls) must not be over 4% moisture content. This can be tested with an appropriate moisture meter. The temperature be between 18° - 22° and the relative humidity between 40% – 60%, while the doors are being stored, before, during and after the installation. Do not bring doors, skirting or architrave into a house or site which does not meet the above conditions.

LOCKS AND HANDLES

When fitting a lock or a handle, it is best not to fit the lock where the stile (uprights) meets the rail (horizontals) as this will weaken the structure of the door.

ROOM CONDITIONS

Timber likes pleasant room conditions, just like us, a room temperature of approx 20°C and humidity of about 50% – 60%.

CLEANING

- Use a clean dry cloth to clean the doors.
- Furniture polish may also be used.
- Never use wax or aggressive detergents or products containing ammonia or silicates on Seadec products.
- Our frosted medical glass should be cleaned with a dry, soft cotton cloth. Do not use damp cloths.

PROTECTING YOUR SEADEC PRODUCTS

Ensure that rooms are well ventilated, particularly in rooms where there are large changes in temperature and moisture. In the event of a proven manufacturing defect, Seadec or the Seadec retailer's total liability shall under no circumstances exceed the value of the defective product. Seadec or the Seadec retailer's shall not in any way be responsible for any additional consequential costs or losses. If you are unclear of any of the above instructions, contact your local Seadec supplier.

HOW TO **FINISH SEADec** WHITE PRIMED PRODUCTS

Preparation is key to any project no matter how big or small. Firstly select a good, dry, clean space to lay the product down flat prior to finishing with sufficient room to work around and where the product can be left to to dry. As with all painting projects adequate ventilation during painting and drying is essential.

The next step is to spend a few minutes checking for any imperfections that may require filling and fine sanding - this is key to achieving a flawless finish and a vital step in the process. The top and bottom of door must be painted the same way to ensure they are fully sealed.

Once the surface is clean and dust free, apply a water based undercoat which will allow better adhesion for your chosen finish.

When the undercoat is dry, give the surface a light sanding before applying your chosen oil or water based finishing coat.

Paint manufacturer's drying guidelines will vary therefore it is important follow them. While "touch dry" may allow you to handle the product it may not be sufficiently dry to begin fitting hinges and handles until full recommended drying time is completed.
