

Hands On Thinking and Learning

A Thinking workshop for teachers

“Hands-On Thinking and Learning” is a training package full of ideas for bringing creative thinking into the classroom. It has been designed for schools and academies wanting to sample the LogoVisual Thinking (LVT) methodology and begin to understand the power of the tool in releasing creative thinking in both teacher and learner.

The session offers:

- An opportunity to experience the power of LVT at first hand.
- An examination of the potential of LVT in the classroom in KS2-5
- A view of the power of LVT to generate discussion, dialogue and collaborative learning
- An exploration of creative thinking and how LVT contributes to this.
- An appreciation of how a knowledge of thinking skills enhances the effectiveness of the teacher’s work.
- A look at ways that exist of creating a thinking classroom.

Delivered in a half day, whole day or twilight format

What recent participants have said:

“Being able to participate in the LVT activities really helps to see the approach in action, enabling me to feel confident about taking LVT into the classroom.”

“Brilliant resource for use in lessons – suits skills based learning for APP in secondary science, and will be used for discussing, thinking and planning experiments.”

“I have a better understanding of how I can embed thinking skills into my lessons.”

“This session showed me how thinking can have an impact on learning – engaging learners is the key to how they learn.”

E-mail or call to explore how this opportunity can be tailored to the needs of your staff.
