Kevin Martin  
GICC LLC

I wanted to reach out to thank you for the M3 product that has been installed at our Edd Helms office now 3 months. We installed the M3 system on our 20-ton Ruud RTU 3 months ago that handles about 80 % of the office.

We have been monitoring our VOC levels since the beginning. While the system runs, we have seen the values under 200 ppb all day long and as low as 50 ppb. When the system is off, levels go up to 400-800 ppb. We started measuring particle counts since last week using our Automated Logic system. The trend shows the particle count is below 30 micro/grams per cubic feet all the time. It goes as low as 5-6 micro/grams per cubic feet. When the system is off the particle count goes up above 50 micro/grams per cubic feet.

We have had no one in the office spread COVID since the M3 system was installed. No one in the office wears a mask since the Florida number dropped below 5%. We have noticed less people out due to flu symptoms. The air seems crisper than usual. There is no odor in the building. When you walk in, it's kind of a neutral odor.

Overall, the M3 system allows us not only feel more confident about our indoor air quality, but from the real results we see, it has reduced overall contaminants in the air including ones that harm us.

Sincerely,

Ed Duran  
Sales Manager
