VIDEO VIEWING ADVISEMENT

You are about to view a digital recording of a use of force event in which you were involved. Understand that while this digital recording displays visual information from the scene, the human eye and brain are highly likely to perceive some things in stressful situations differently from a digital recording. Therefore, this digital recording may not reflect how you actually perceived the event, and it may not capture all the actions that occurred.

The digital recording may display things that you did not see or hear. Depending on the quality of the digital recording, some action elements may not have been recorded, or may have happened faster than you could perceive and process them.

The digital recording has captured a two-dimensional image, which may be different from a human's three-dimensional observations. Lighting and angles may also have contributed to different perceptions.

Additionally, the digital recording did not capture the scene or record with your own unique experience and training.

Hopefully, this recording will enhance the understanding of the incident. Keep in mind, however, that these digital recordings are only one piece of evidence to be considered in reconstructing and evaluating the totality of the circumstances. Some elements may require further exploration and explanation before the investigation is concluded.
