

STATISTICS SHOW...

50-70% of the members in any size group, will not use the group health plan, or they use it so little that it is of no significance.

A small percentage of people will use the plan infrequently for items such as a minor sprain, a prescription or something incidental.

A very small percentage (4-7%) will use the plan to its fullest extent. This could be for management of a chronic condition, an accident, pregnancy, etc.

Why pay high fixed premium every month assuming every person is using your group health plan?

Let us help you maximize your dollars.

These are the average statistics regardless of group size. You can have 5 employees or 500 employees. It doesn't matter.
