

ZKBioSecurity

"All-in-One" Web-Based Biometric Security Management Platform

"All-in-One" Web-Based Biometric Security Management Platform

Personnel

Access

Attendance

Elevator

Hotel

Visitor

Parking

Patrol

Video

ZKBioSecurity is the ultimate "All-in-One" web based security platform developed by ZKTeco. It contains multiple integrated modules: access control, elevator control (online/ offline), visitor management, guard patrol, hotel module, T&A, parking and video linkage. With an optimized system architecture designed for high level biometric identification and a modern user-friendly GUI, ZKBioSecurity provides the most advanced solution for a whole new user experience.

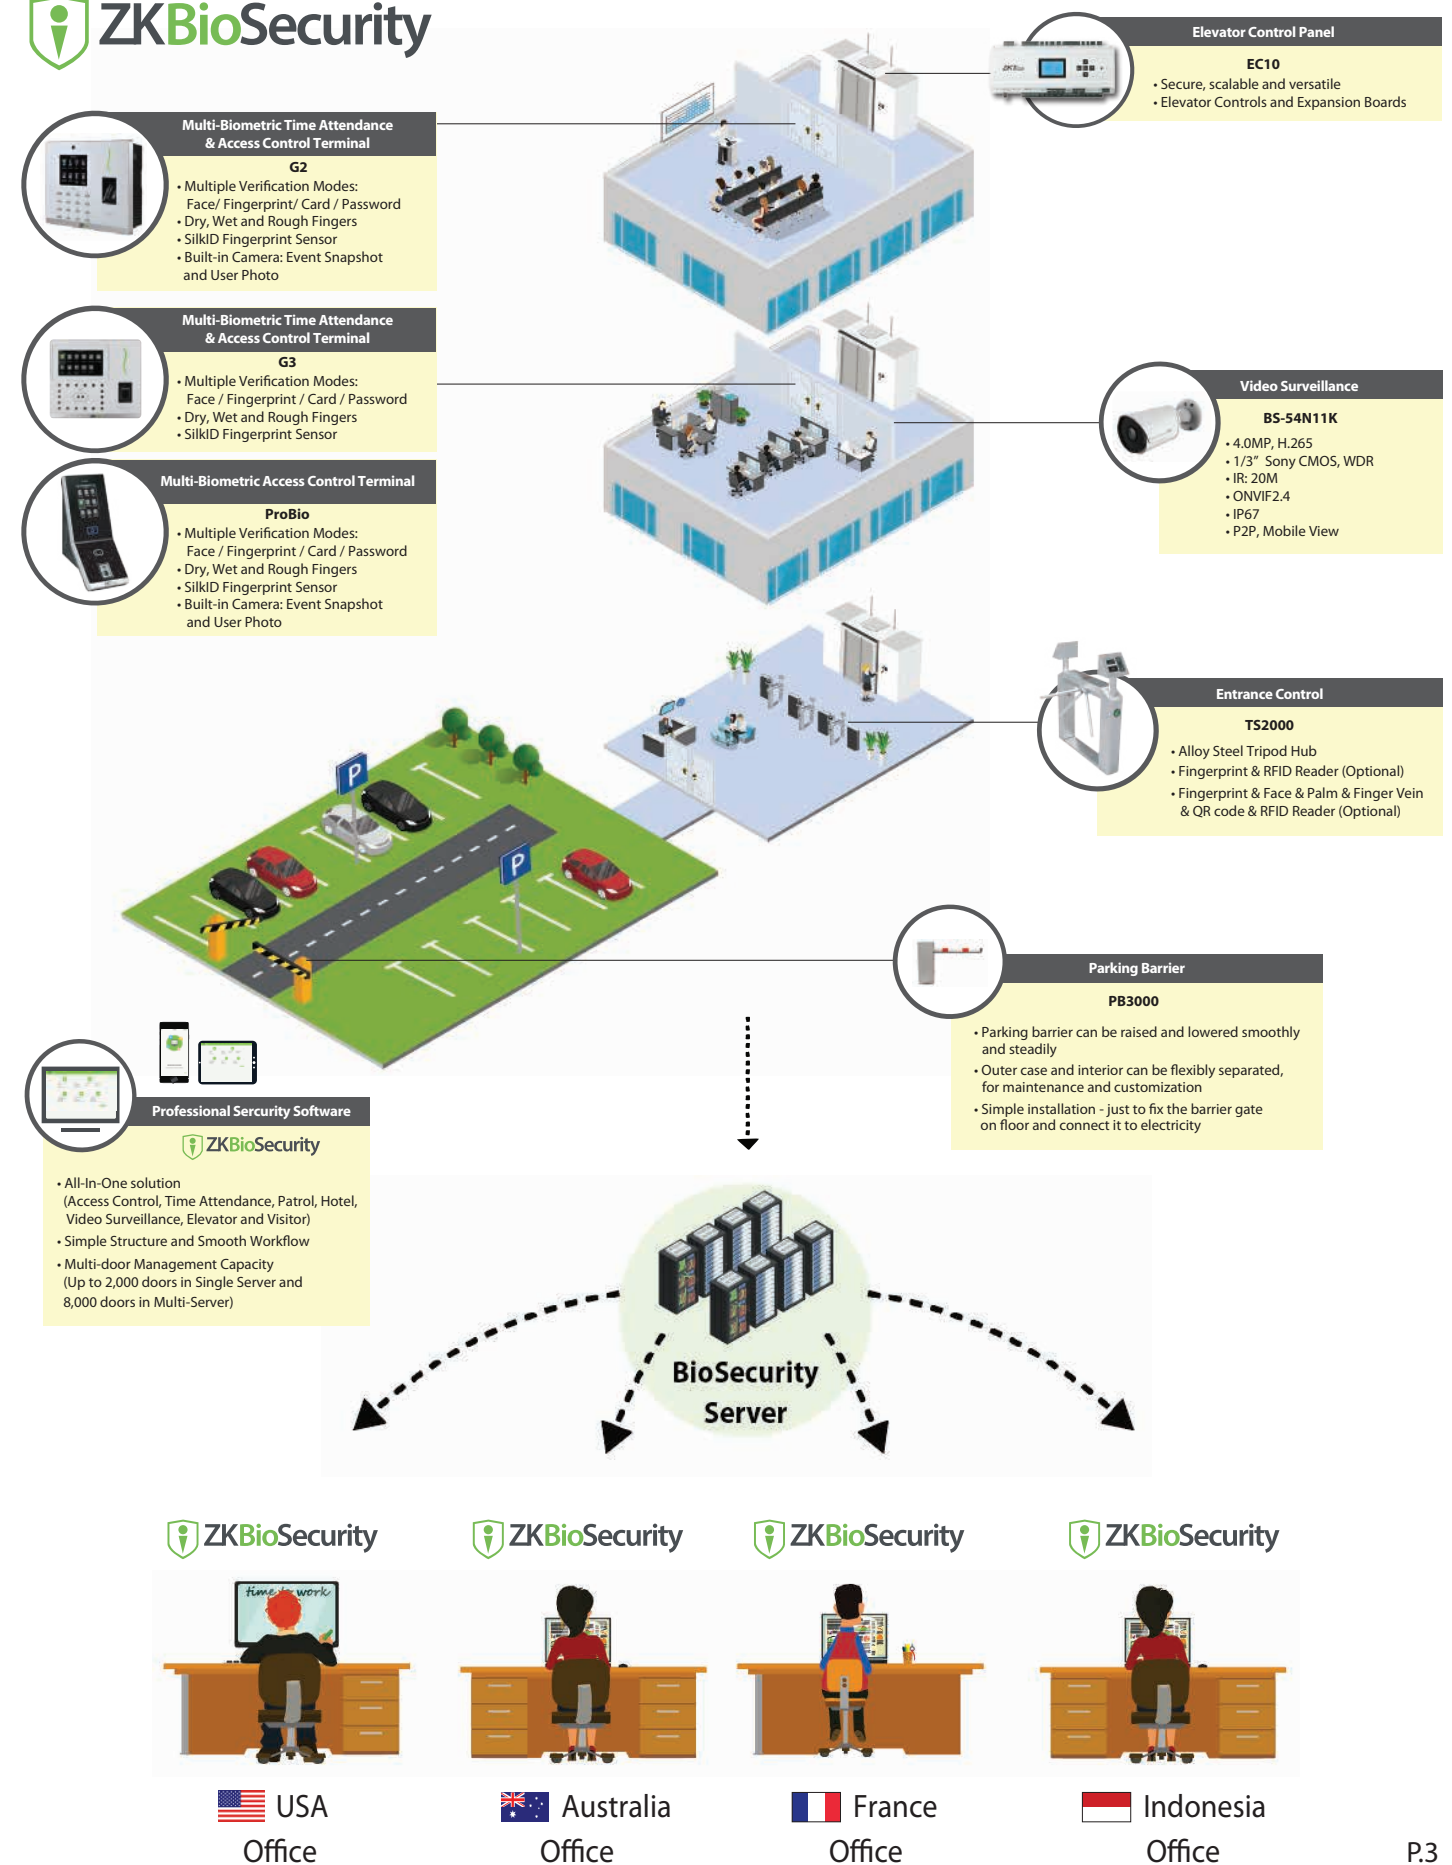

Features:

- Global Scale All-in-One Web-Based Security Platform.
- Supports thousands of doors and T&A terminals.
- Reliable and high speed industrial grade encrypted communication.
- Advanced Access Control Functions (Global Linkage, Global Anti-Passback, Global Interlock, etc...).
- Supports ZKBioHA high availability system, to ensure 24/7 continuity system operation.
- Compatible with 3rd party IPC/ NVR/ DVR via industry standard Onvif.
- Automatically scheduled Data Backup.
- Alarms and Events Notification (system monitor, email, SMS).
- Thorough and detailed system log monitoring system.
- Supports Multi-modal biometric authentication (Fingerprint, Face, Finger Vein) and various PROX card formats (EM, Mifare, HID, Desfire etc..).
- Supports Card Printing with 3rd Party card printer.
- Supports Multi-location management.
- ZKBioSecurity Mobile App supports iOS and Android platform.

"All-in-One" Web-Based Biometric Security Management Platform

ZKBioSecurity

ZKBioSecurity is the ultimate “All-in-One” solution which offers a complete security management platform, it comes with 9 integrated modules.

- | | | |
|----------------------|-----------------------|-------------------|
| 1) Personnel | 4) Elevator Control | 7) Parking System |
| 2) Access Control | 5) Hotel Management | 8) Patrol |
| 3) Time & Attendance | 6) Visitor Management | 9) Video Linkage |

Personnel

Personnel primarily consists of two parts: Department Management settings, which is used to set the Company’s organizational chart; and Personnel Management settings, which is used to input personnel information, assign departments and sub-departments (more than 10 levels), maintain and manage personnel information and setting.

Access Control

Access Control is a web-based management system which enables advanced access control functions, management of networked access control panel and standalone devices via computer, and unified personnel access management. The access control system sets door opening time and levels for registered users.

Time & Attendance

As an "All in One" security platform, the ZKBioSecurity contains a web-based time attendance module. Administrators can manage the Time Attendance anywhere once they can access to the Internet. Moreover, this is an powerful Time Attendance system, which can handle most of the complicated time attendance circumstance, such as, flexible shifts, multi-level OT, cross day shift and online leave application with multi-level approval.

Elevator

Elevator Control is designed to control the elevator access authentication, to manage access rights (using RFID card, Fingerprint, and other biometric technology) to different floors and supervise elevator events. Administration can set floor level for the registered user and interact with the access control module to achieve the one stop management purpose. Only the authorized users can access to certain floors and doors within a period of time after being authenticated.

Hotel Management

Provides hotel service management functions covering check-in, overstay, check-out, rate settlement, and lock setup and management.

Visitor

Visitor Module is a web-based management system that implements entry registration, exit registration, snapshot capturing, visitor quantity statistics, reservation management and shares information among registration sites. Integrated with the access control system, it is used at the reception desks and gates to manage visitors.

Parking Management

Automatic and intelligent vehicle management effectively and accurately monitors and manages vehicles at all exits and entrances.

Guard Patrol

The Online guard patrol module is a new cost effective way to accomplish guard patrol management, ZKBioSecurity can use the access control terminals, time & attendance terminals and readers to act as guard patrol check-in points, end users do not need to carry out another set of equipment for guard patrol management. Moreover, the ZKTeco terminals and reader offer biometric technology to enhance the security level for the guard patrol check point. No addition equipment is required for the guard to carry, and the ZKTeco System offers biometric technology to greater enhance the security level of the guards.

Video

For high-level security demand, a video surveillance management platform is essential to most of the premises. ZKBioSecurity provides a video surveillance module which supports real time video and query video records, real time video pop-up alert when linkage event occurs. Moreover, this module can integrate with 3rd party cameras through private protocol and ONVIF. This module can also interact with other ZKBioSecurity modules such as access control, visitor, patrol, parking and hotel management.

System Management

System Management is designed to assign system users, configure the corresponding modules, manage the database, set system parameters and manage the system operation logs.

Highlight 1: Web Based Access Control and Time attendance Software

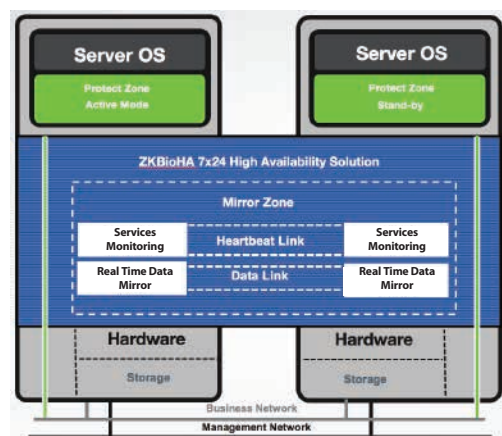

Users can access the centralized system anywhere by their web browser to remotely manage thousands of standalone terminals and controllers under wide area network (WAN).

Highlight 2: Highly Integrated with ZKBioHA – Continuous Service Guaranteed 24/7

What is BioHA

ZKBioHA is a high availability solution for enterprise, it can integrate with ZKBioSecurity platform to provide professional real-time sync of business data and business continuity protection for customer. The solution supports high availability protection for different app software platforms and mainstream databases, so as to provide data and app protection for customer's kernel business system.

Business Continuity

ZKBioHA provides the professional real-time sync of business data and business continuity protection for the customer, which solves software/ hardware single point of failure (i.e. system upgrades, computer crash, software bugs, hacking, broken connections and cyber attacks) and realizes automatic failover in case of failure to ensure business system continuity.

Computer Crash

Software Bugs

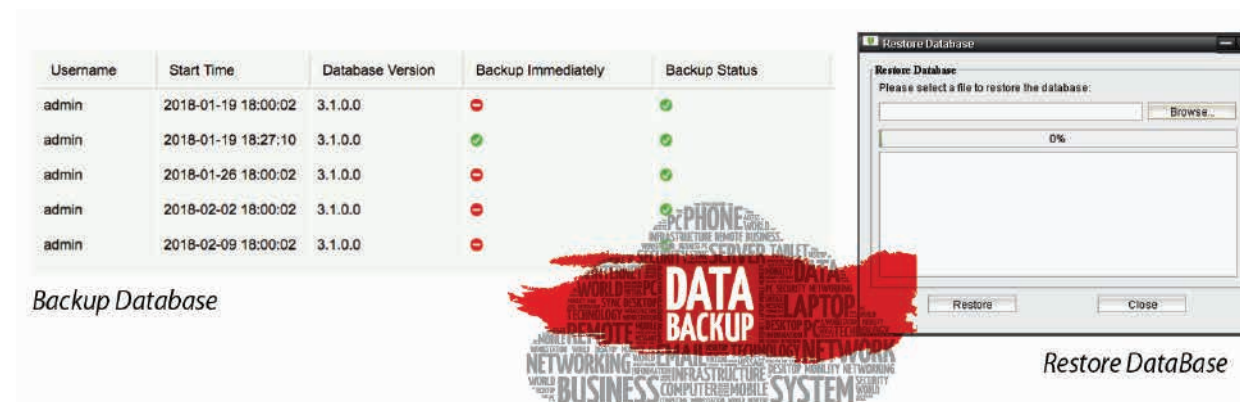

Cyber Attacks

Broken Connections

Power Failure

Highlight 3: Backup

ZKBioSecurity has the ability to schedule an automatic backup of the database, mapped to a designated drive at a specific time.

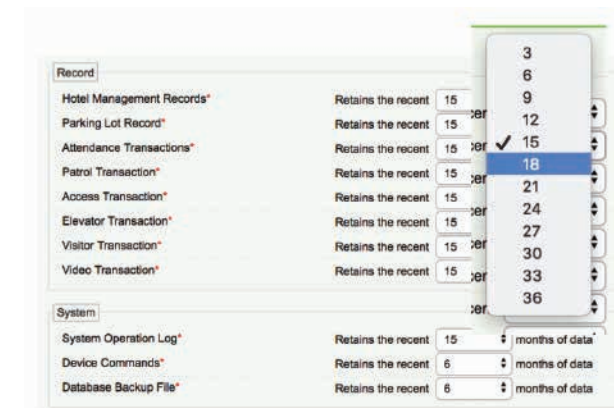

Backup Database

Restore DataBase

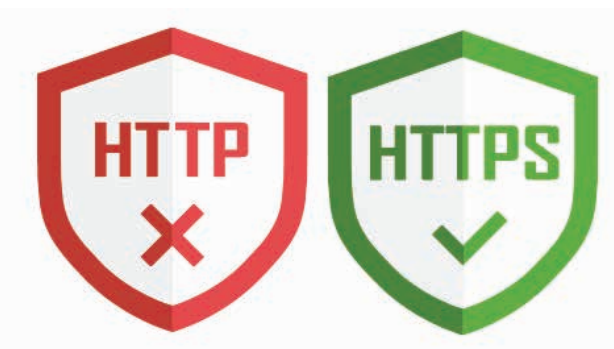

Highlight 4: Data Cleaning

The data cleaning function is designed to optimize the ZKBioSecurity System performance by scheduling a cleanup of outdated data on designated modules or all modules.

Highlight 5: HTTPS

ZKBioSecurity provides a high secure communication over a computer network, HTTPS (HTTP Secure), an adaptation of the Hypertext Transfer Protocol, which is widely used on the Internet, It means all communications between your browser and the ZKBioSecurity Client are encrypted.

Highlight 6: Email

After the email server is setup, the system can send email notifications automatically to designated recipients. For example, if the door is opened forcefully, notification email will be sent to the administrators; if the employees have abnormal attendance records, email will be sent to the administrators.

	Sender	Receiver	Subject	Submit Time	Send Time	Status	Error Message

Highlight 7: Operation Log

The Operation Log function monitors and records the operation on the system modules. This function enables users to check who performed each operation, when it was performed, what was performed, and where it was performed. In addition, this function can help you analyze the causes of system errors or other types of problems from the record data.

Highlight 8: 3rd Party API (Application programming interface)

The ZKBioSecurity platform can be integrated with multiple applications of 3rd party software. Typically, the functions include data input and system queries.

Highlight 9: DNS

When using ZKBioSecurity on a WAN (Wide Area Network) the terminals and controllers can be accessed and configured outside the LAN (Local Area Network) by using a DNS (Domain Name Server). Using an IP address provided by the local internet provider, the end user is able to connect to the service via the DNS and manage the system.

Personnel

Personnel consists of two parts: Department Management and Personnel Management. Department Management is designed to set the company's organizational chart. Personnel Management is for personnel information, departments and sub-departments (excess of 10 levels) and to maintain and manage personnel settings.

All-in-one Solution (Area/ Department)

ZKBioSecurity has a user-friendly all in one personnel registration interface, which can enable administrators to input employee's information and staff enrollment (including fingerprint, PROX cards) and user's photo in one single page.

Supports Various Cards Format

ZKBioSecurity is compatible with most PROX card formats, such as: EM, MiFare, DesFire EV1, Desfire EV2, Legic, HID Proximity, HID iClass, Felica, Type B, ... etc.

Statistics

ZKBioSecurity has an overview function for viewing the number of personnel, the number of fingerprint templates, facial template, finger vein template, card number, gender and other statistical information.

Statistical Type	Current Total
Male	0
Female	0
Personnel Quantity	2
Fingerprint Quantity	0
Face Quantity	0
Finger Vein Quantity	0
Number of cards held	0

This is the sample of the ZKBioSecurity Statistics list, as the graph shown, it can help administrators easily and clearly observe the company demographic distribution.

Support various verification (Fingerprint, Finger Vein, Card...etc.)

ZKBioSecurity supports various kinds of biometric verifications, such as, fingerprint, finger vein, PROX card, which submitted data will be recorded by ZKBioSecurity.

Biological Template Quantity

High-speed Portable HD Doc Scanner Supports

User's Information Capturing + Passport Photo + OCR Recognition

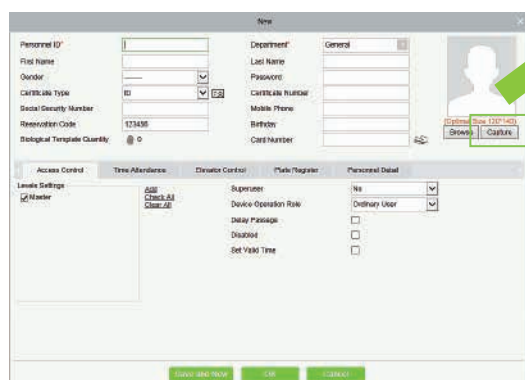

During visitor registration, it supports one-click capture of users' portrait image, passport photo and saving, and uses OCR function to automatically read identity document (identity card, passport etc.) and fill in effective information in order to realize quick registration.

Passport Photo + OCR Recognition

OCR function automatically reads identity document

User's Portrait Capturing or Uploaded from the local PC

One-click capture of employees' portrait image

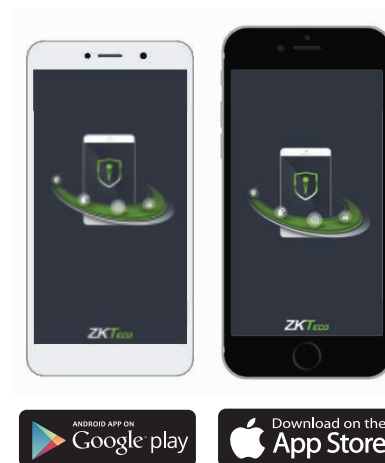

Report

Attendance Module supports to generate the summary report for administrator including, Daily Attendance, Leave Summary, Daily Report, Monthly Detail, Monthly Statistics, Departmental Report, Annual Report, Automatic Report.

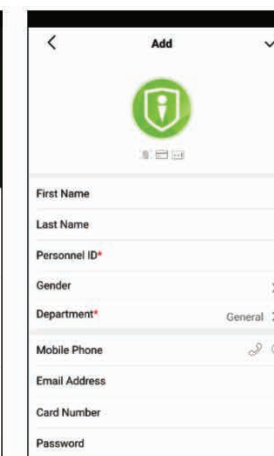

Support iPhone and Android APP

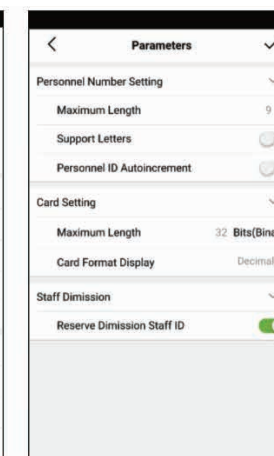

Offers Personnel Editing / Enrollment functions. Access control floor distribution Function enables users to real-time add, delete or check information of particular staffs in mobile app.

Menu

Personnel Data modification

Setting (Personnel)

* Users may download ZKBioSecurity App. via App Store on iOS or Google Play Store on Android

Access Control Module

Access Control is web-based management system which enables advanced access control functions, management of networked access control panel via computer, and unified personnel access management. The access control system sets door opening time and levels for registered users.

Global Linkage

One of the highlighted functions of the ZKBioSecurity is the Global Linkage. It is able to automate system cross platform interactive functions and notifications system. There are multiple tiers to the alert process including relay inputs and outputs, video recording and photo capture (ONVIF), active time, email notification and linkage voice prompts.

Output point

With Global I/O, Output point allows administrators to configure linkages where various events can be linked to any other input/ output/ events in the system. These linkages can be activated by various events with different access levels, invalid cards, unrecognized fingerprints and motion detection might trigger correlated outputs (Alarm, IP Camera ...etc.).

Video Linkage

Photo capture, video recording and Pop-up video to warn administrators, when exceptional events take place, such as, Duress Finger / Card triggered, blacklist users, door open forcefully and illegal time zone access, etc. Moreover, the video could include footage before the events occur. Video footage length could be up to 180 seconds.

Active Time

Administrator can set an active time for the linkage by pre-defined time zones or date range.

Email Notification

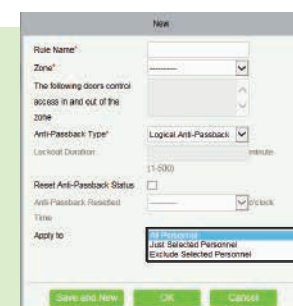

Email notification allows the system automatically send out email to notice administrators once specific events occurs.

Linkage Voice Prompts

Voice linkage will announce a series of warning messages which are accompanied by siren sounds. These linkage announcements will be triggered by particular actions.

Global Anti-Passback

Global Anti-Passback is a security function designed to eliminate authorized and/or unauthorized personnel from going into area without presenting proper credentials (i.e. tail-gating). In the event a person enters a secure area without authentication, as the red colored person in the image below, that person will be detained in the secure area, even if they have access rights to the area. Administrative personnel will have to override the system to allow the unauthorized person to exit then enter the area in the future.

All Personnel
Just Selected Personnel
Exclude Selected Personnel

All Personnel:

Global Anti-Passback will work on all people.

Just Selected Personnel:

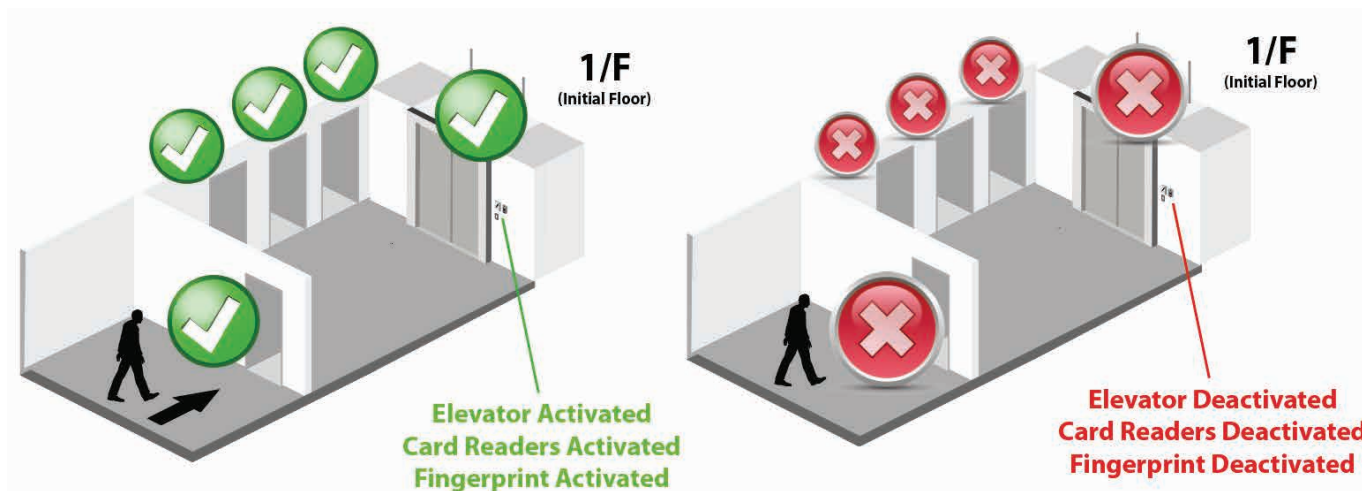

Anti-passback is only effective for these selected personnel.

Exclude Selected Personnel:

The anti-passback is only effective for these exclude selected personnel.

Global Interlock

Global Interlock is an advanced security function that heightens the security level by interacting with different security areas. It is designed to prevent persons from opening more than one door at a time even, if the persons have multiple door access authorities. It is able to precisely appoint access authorization including activations of access authorization of specific doors when the correlated doors are locked properly. Most commonly used in man-traps.

Who is Inside

By using the "Who is inside" function, administrators can verify how many people remain in a specific area/room, with detailed personal information and access time. This function is typically used in a disaster situation where mustering is required.

John Wilkinson is inside the Area A

Personnel ID: First Name: Last Name: More

The current query conditions: None

Personnel ID	First Name	Last Name	Department	Card Number	Last Access Time	Last Access Read
018964	John	Wilkinson	Account	015635	5:00pm	

Access Limitation

Allows administration the ability to limit the number of people in a limited space. Example: If a room is reserved for 10 people, the system can be programmed to accept only 10 authorized credentials, when one person leaves another person can enter. /constantly keeping the number of occupants at 10.

Maximum reserved for 10 people
Access Control only allows 10 people to access

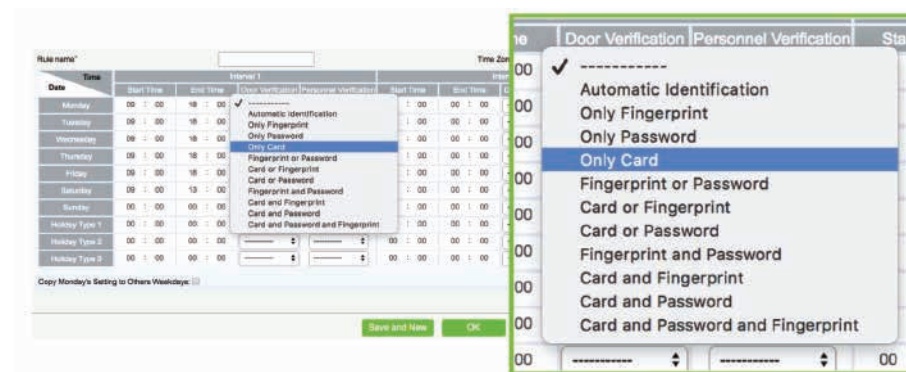

E-Map

E-Map enables administrators to have a clear and accurate view of all event points. With its cutting edge multi-level E-map structure, administrators can simultaneously monitor multi-levels / areas events.

Access Control Time Zone (Card/ Fingerprint)

Allows administration to set specific time zones during the day that specific credentials are valid. Example; During the normal business hours the records room can be access with a PROX card, however after 5:00 a person would be required to use the PROX card as well as fingerprint and/or facial recognition and/or password. Multi-authentication during specific time zones.

Auxiliary Input and Output

Name	Device Name	Number	Printed Name
Auxiliary Input-1	216.27.0.1	1	IN1
Auxiliary Input-1	192.168.217.221	1	IN1
Auxiliary Input-2	192.168.217.221	2	IN2
Auxiliary Input-3	192.168.217.221	3	IN3
Auxiliary Input-4	192.168.217.221	4	IN4

Name	Device Name	Number	Printed Name
Auxiliary Output-1	216.27.0.1	1	OUT1
Auxiliary Output-1	192.168.217.221	1	OUT1
Auxiliary Output-2	192.168.217.221	2	OUT2
Auxiliary Output-3	192.168.217.221	3	OUT3
Auxiliary Output-4	192.168.217.221	4	OUT4

Auxiliary Input:

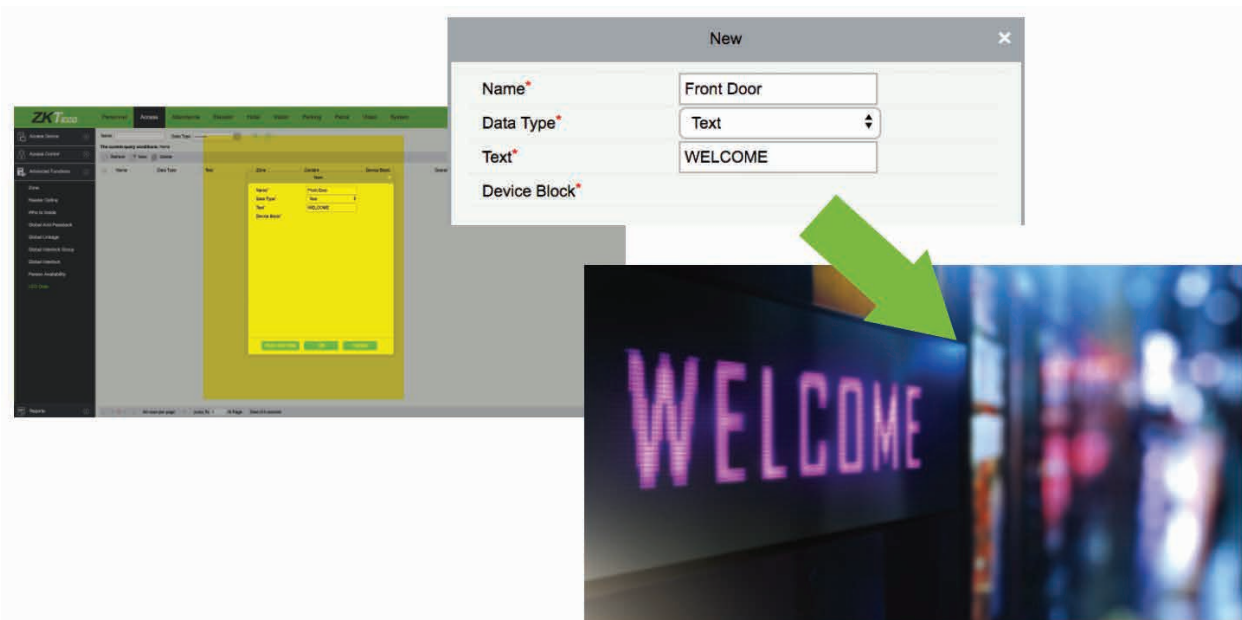

Used to connect to devices, such as, the infrared sensor or smoke sensor, exit button, contact sensor, door contact and intrusion alarm.

Auxiliary Output:

Mainly connected to alarm, it is used when linkage is working, such as, burglar alarm, alarm, LED light, buzzer.

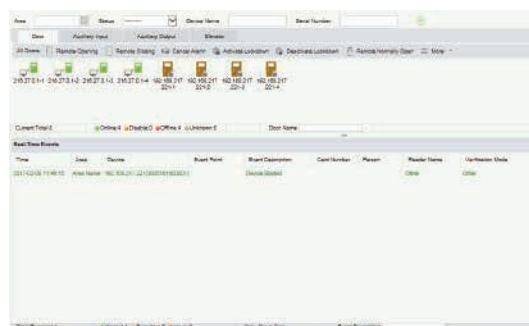

Flexible and editable text function for LED / LCD Display Panel

ZKBioSecurity provides a programmable LED / LCD display function to show editable and the real time "who is inside" personnel information.

Real Time Monitoring

ZKBioSecurity enables users to monitor the entire system, real time, by showing all the detailed status, including any abnormal situation at a door with support of video linkage and photo capture pop-up when an abnormal security event occurs.

	Door opening timeout, Relay closed /Without relay status, Door Sensor Opened		Door opening timeout, Relay opened/Without relay status
	Door opening timeout, Relay closed/Door Sensor Closed		Door opening timeout, Relay opened/Door Sensor Closed
	Door closed alarming, Relay closed/Without relay status		Door closed alarming, Relay opened/Without relay status
	Door sensor unset, Door alarming, Relay closed		Door sensor unset, Door alarming, Relay opened
	Door opening timeout, Without relay status/Door Sensor Closed		Door locking
	Device banned		Door Offline
	Door sensor unset, Relay closed /Without relay status		Door sensor unset, Relay opened/Without relay status
	Online status Door closed, Relay closed/Without relay status		Online status Door closed, Relay opened/Without relay status
	Online status Door opened, Relay closed/Without relay status		Online status Door opened, Relay opened/Without relay status
	Door opened alarming, Relay closed		Door opened alarming, Relay opened

Remote Lock-Down

Administrators can remotely open/close and/or lock down all or selective doors on the system. When in 'Lock-Down' all access is overridden until lock down is deactivated.

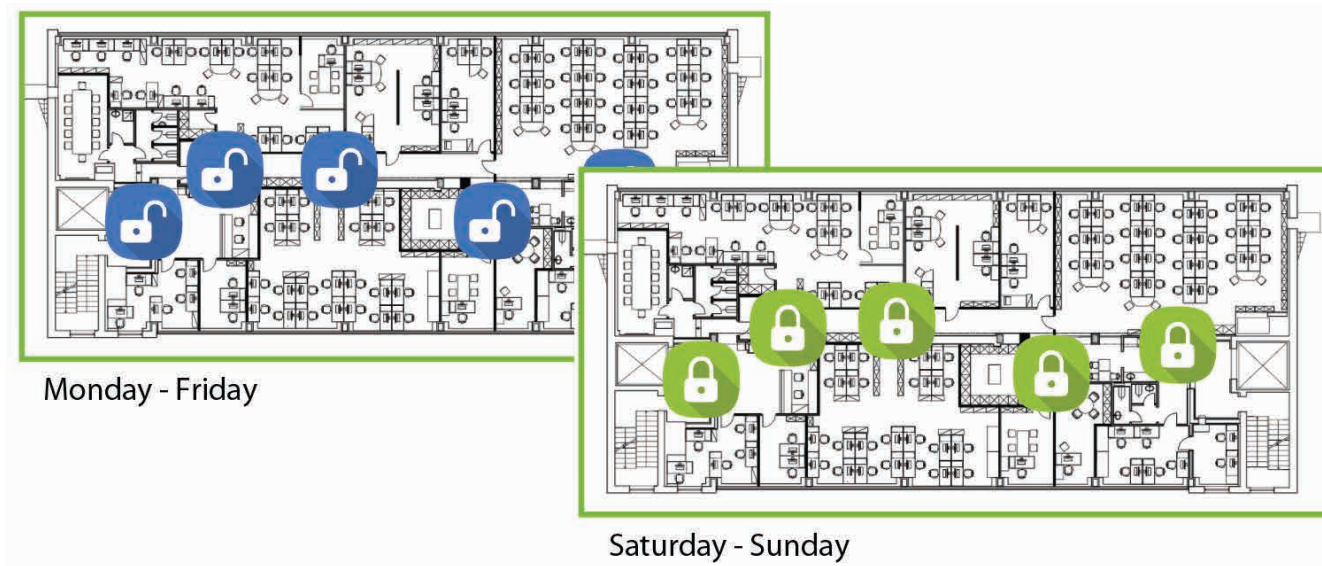

Access Record with Customizable Formats

Access records are an essential part of the decision to choose the appropriate Access Control System. ZKBioSecurity provides customizable detailed reports simply by selecting the desired fields to display.

Limit Entry by Time Zone

ZKBioSecurity is extremely flexible, allowing the administrator to schedule holidays, half-time days and special applications.

Report

The ZKBioSecurity Time & Attendance Module generates several reports including daily attendance, leave summary, monthly detail, monthly statistical, department reports, annual reports and scheduled automatic reports.

Support iPhone and Android APP

Offers real-time access control records, users are able to check particular door access control records simply by logging in on mobile phones, and may check alarm records in alarm page and may perform positioning of alarm locations for the convenience to track accidents. ZKBioSecurity also supports remote door opening and closing, users may perform remote door control with a few simple clicks on their phones.

* Users may download ZKBioSecurity App. via App Store on iOS or Google Play Store on Android

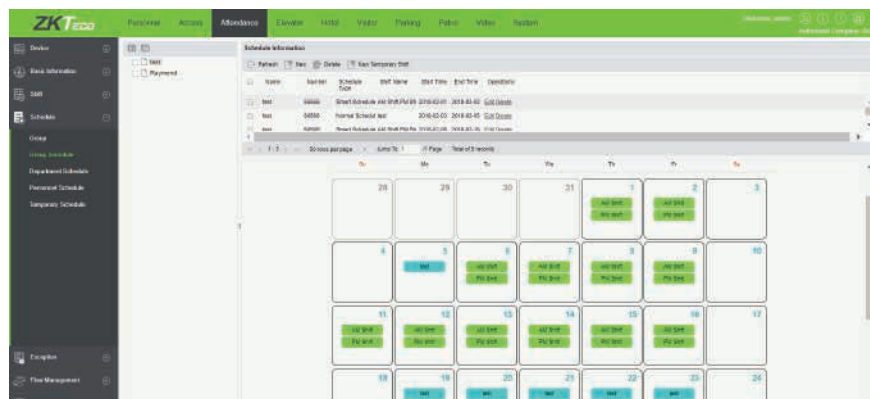

Time & Attendance

As an "All in One" security platform, the ZKBioSecurity contains a web-based time & attendance module. Administrators can manage the Time & Attendance module from anywhere they have access to the Internet. Moreover, this is an powerful time & Attendance system, which can handle most of the complicated time & attendance circumstance, such as, flexible shifts, multi-level OT, cross day shift and online leave application with multi-level approval.

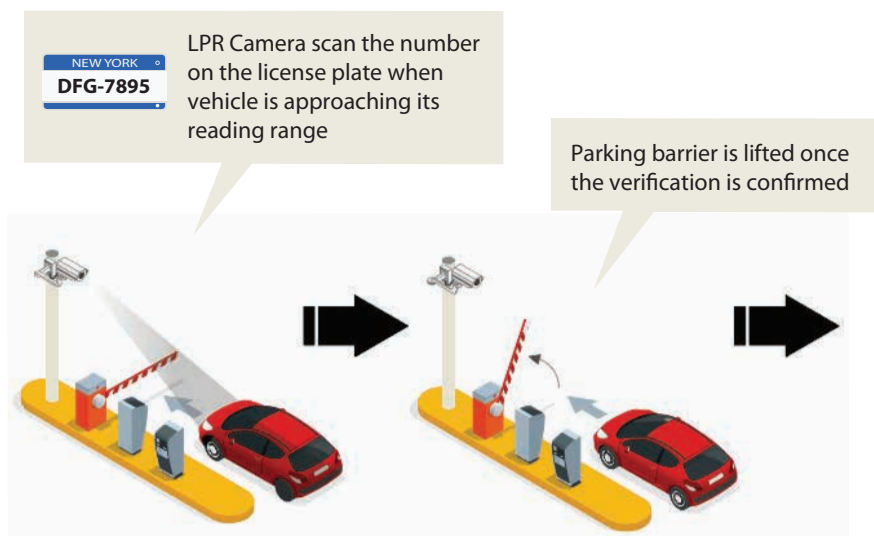

Flexible Group Scheduling

ZKBioSecurity provides flexible group scheduling in the Time & Attendance module, providing users to group their employees, the entire company and individual departments with the same attendance rules. Users have the ability to set attendance parameters like check-in, check-out and overtime rules.

Access Control and LPR Attendance Tracking

Unlike most Time & Attendance systems on the market, ZKBioSecurity can link with the access control terminal and panel linked to the LPR (License Plate Reader) Terminal and retrieve records for time & attendance calculations.

Employee Self Log-In

Employee Self-Log-in is a cutting-edge function for employees to enter the server to perform job-related functions anywhere and anytime. An employee can up-date personal information, leave an application, submit and exception, including OT, manual punch-in, shift adjustment, etc., etc., and request a self-report inquiry.

Multi-Location

Users can access the centralized system anywhere by their web browser to remotely manage thousands of standalone terminals and controllers under wide area network (WAN)

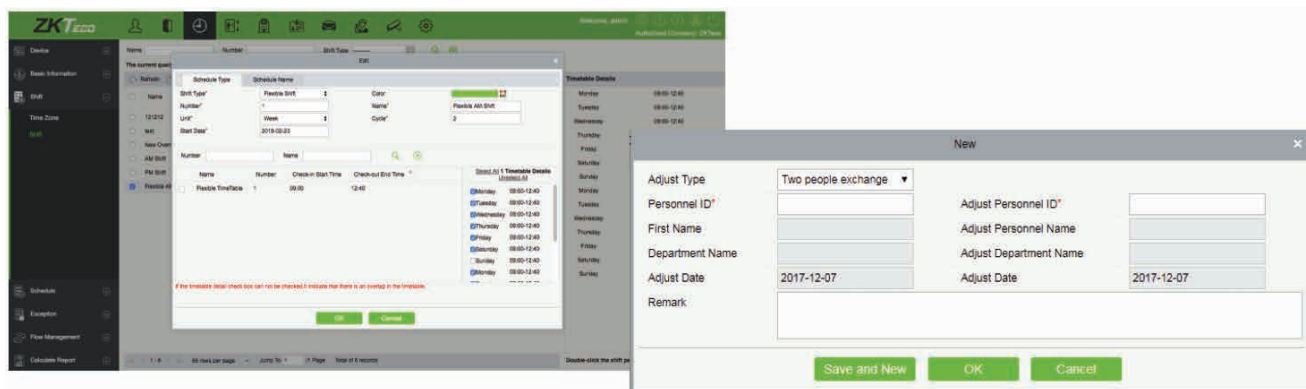

Merge with the 3rd Party HR Management

In order to extend the ZKBioSecurity functionality, ERP and HR integration is possible by generating automatic data with custom attributes , such as, staff name, department, area, staff ID, etc.

Flexible Shift Scheduling

There are different T&A shift requirements in different industries, some of them are subject to chaos situation, such as, retail, F&B and patrol guard, a shift management with flexibility is essential for their operation management.

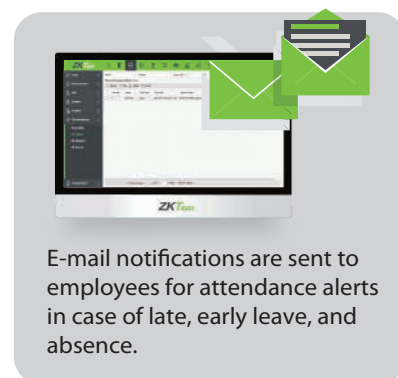

Multi-Level Approvals and Automatic E-mail Alerts

Email notifications for the attendance exceptions and multi-level approvals.

Leave or manual punches can be applied through ZKBioSecurity, which can be approved by multi-level approvers who are set by hierarchical level.

Report

Attendance Module supports to generate reports for administrators, such as, Daily Report, Leave Summary, Monthly Detail, Monthly Statistical, Department Report, etc.

To maximize the working efficiency, the ZKBioSecurity supports the automatic report generating with custom formats & fields.

Elevator

Elevator Control is designed to control the elevator access authentication, to manage personnel's access rights (using PROX card, Fingerprint, and other Biometric technology) to different floors and supervise elevator events. Users may set registered user's right to floors and interact with the access control module to achieve the one stop management purpose. Only the authorized users can access to certain floors and doors within a period of time after being authenticated.

Support Maximum 58 Floors

ZKBioSecurity has designed a unique function for elevator control, the EC10 panel and EX16 floor extension board, it provides customers the most secure, scalable, versatile and affordable access control solution available today for elevators. It supports maximum 58 floors elevator.

Global Linkage

Elevator control supports the global linkage function to trigger events / alarms once condition fulfilled, such as, unregistered personnel, illegal time zone access, duress verification, etc. The photo capture and video recording also are the highlight of this function.

Elevator Operation Limitation by Timeslots

The integration with ZKTeco's products also enables to limit elevators' operation in specific time. For actual implementation, if the elevator control is set to stop operating to go upward between 9:00 p.m.to 7:00 a.m., Unauthorized persons will only be allowed to go downward even with cards for floor access.

Online Mode/ Offline Mode

ZKTeco elevator control can either operate in online or offline mode.

Online Mode: Require TCP/IP, and all elevator access transactions are stored locally in elevator controller and automatically uploaded to back end server.

Offline Mode: Offline data can be read with current Mifare which will not require the TCP/IP. The advantage of using offline mode is the old elevator will also be able to install the elevator control with the low installation cost.

Hotel & Visitor & Video Module Linkage

One stop access right setting for hotel & Visitor module, administrators can set individual access rights to different floors and doors to maximize the security level for different application, such as, hotel guest can only access to their living floor and limit the visitor to open floor.

Report

Elevator Control Module supports to generate reports to summary all transaction, exception event, and access right (by floor or personnel).

Hotel Management

It provides hotel service management functions covering check-in, overstay, check-out, rate settlement, and lock setup and management.

Online Reservation

Online reservation is the highlight of the hotel management module which enables staffs/ administrators to make remote online room reservation record as long as they are connected with Internet. Moreover, with its user friendly interface, administrators / staffs can clearly check out how many rooms are currently available and easy to reserve special rooms in a period of time for customers.

Loss Card

Guests are given the hotel cards once they checked in, if the guest lose their hotel room card, this will be complicated in certain old hotel management system, however, ZKBioSecurity offers a better and simpler way to fix this problem. Hotel staffs only need to select the "Report Lost Card" function and then register a new card for the guests, once the guests swipe the new card on the lock, the new card will replace the old card and delete the old card access right at the same time.

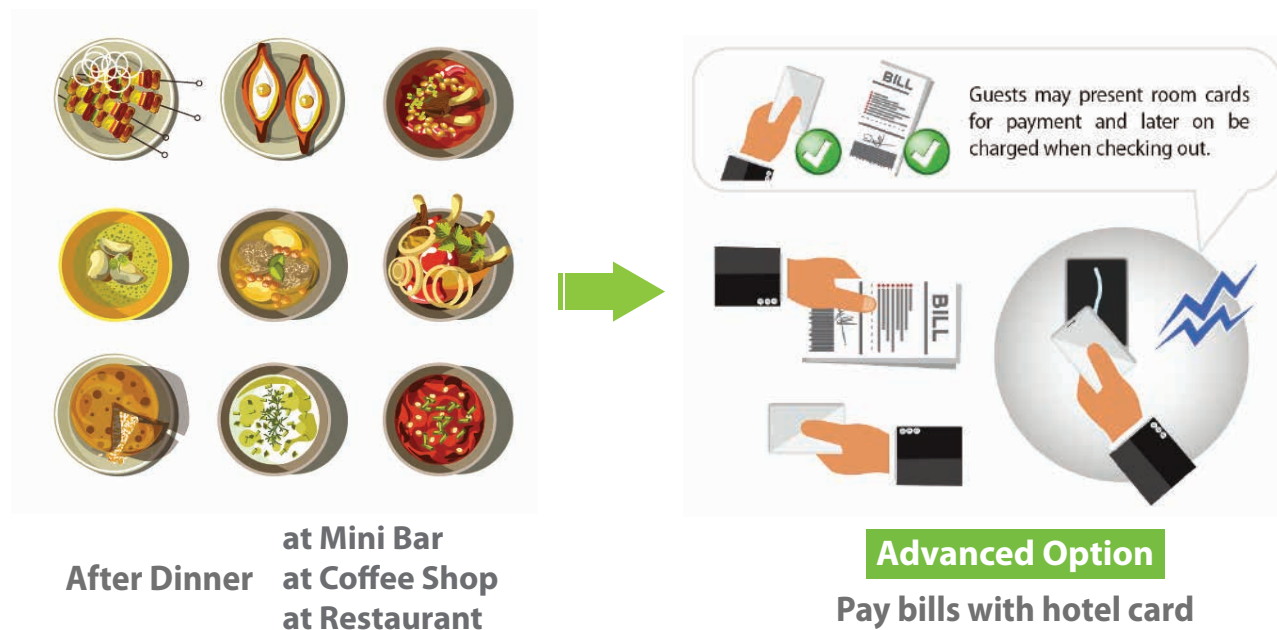

Merge with Access Control and Elevator Module

Elevator control module allows the guest to take the elevator on the specific time, and grants elevator to operate if the elevator to work if there is a booking for the other location. For example, to reserve the hotel room and the elevator, the hotel staff just simply click out the corresponding date and time via ZKBiosecurity software web based platform. This proven and recognized procedure can prevent the guest re-enter the hotel room and the elevator with the lost card.

Advanced Payment Option of Consumption Management

Hotel guests often need to make payments by cash or credit card. ZKBioSecurity offers an advanced option for guests to pay when checking out. Simply present hotel cards after having meal wherever at hotel lounges, coffee shops or restaurants, and guests may pay charges when leaving the hotel.

Report

To complete the hotel management function, the report is necessary , and ZKBioSecuerity hotel management module do offer detailed report, including, guest check in, room check in, room charge, issue card, unlock record.

Visitor Module

Visitor Module is a web-based management system that implements entry registration, exit registration, snapshot capturing, visitor quantity statistics, reservation management and shares information among registration sites. It is highly integrated with the access control system and elevator control system. It is generally used at reception desks and gates of enterprises to manage visitors.

Multi-point Visitor Registration Management based on Web

Supports setting of visitor registration points, multi-point registration visitor management, and mutual sharing of a publicized management database.

E-mail and SMS Notification Functions

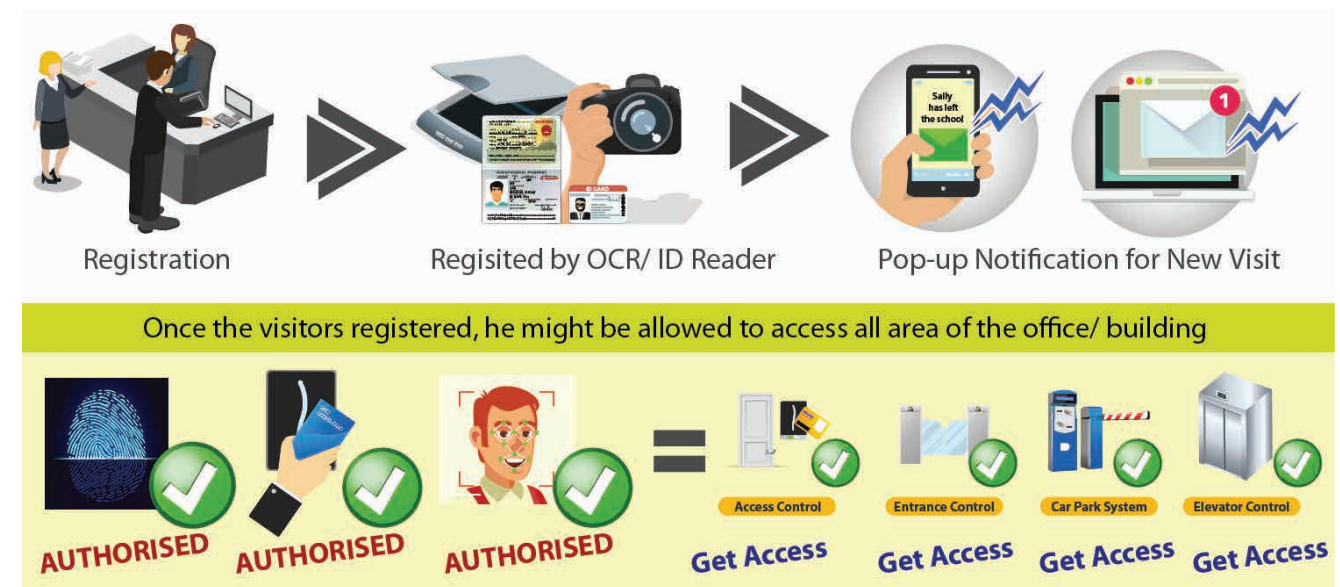

During visitor registration, in case of overtime visits, visitor registration, overtime visitor registration, visitor checking out, monitoring lists, the system will deliver e-mail or SMS notification to visitors, recipients or managers in registration site. SMS and e-mail templates support customization, templates with different contents, delivery rules and recipients according to conditions can be customized. If it is set to deliver in day of visit, all notifications will be delivered to the specific recipients on specific time.

If there is an overtime visit, the system will deliver e-mail or SMS notification to visitors, recipients or managers in registration sites.

Visitor Management Process

Employees can help the visitors to make reserved registration, successful reservation information will be delivered via email or SMS to notify recipients, visitors and registration managers etc. Visitor registration can also be done by identity card registration (OCR or ID Reader), signature, photo capturing, passport capturing or car information registration etc. in order to enhance the safety level. Visitor authority supports automatic distribution of recipient department authority group according to visitor's location. Also, copying function enables users to select needed visitor information and copy to new registration interfaces, including recipient information, reasons for visit, corporate information, authority information etc., which can bring convenience and save time to group visit registration. After successful registration, visitors may have access to designated areas with visitor cards or visitor receipts. It supports multiple verification modes including card, password, finger print, QR code etc. After visit, visitors may return cards in the registration site for checking out.

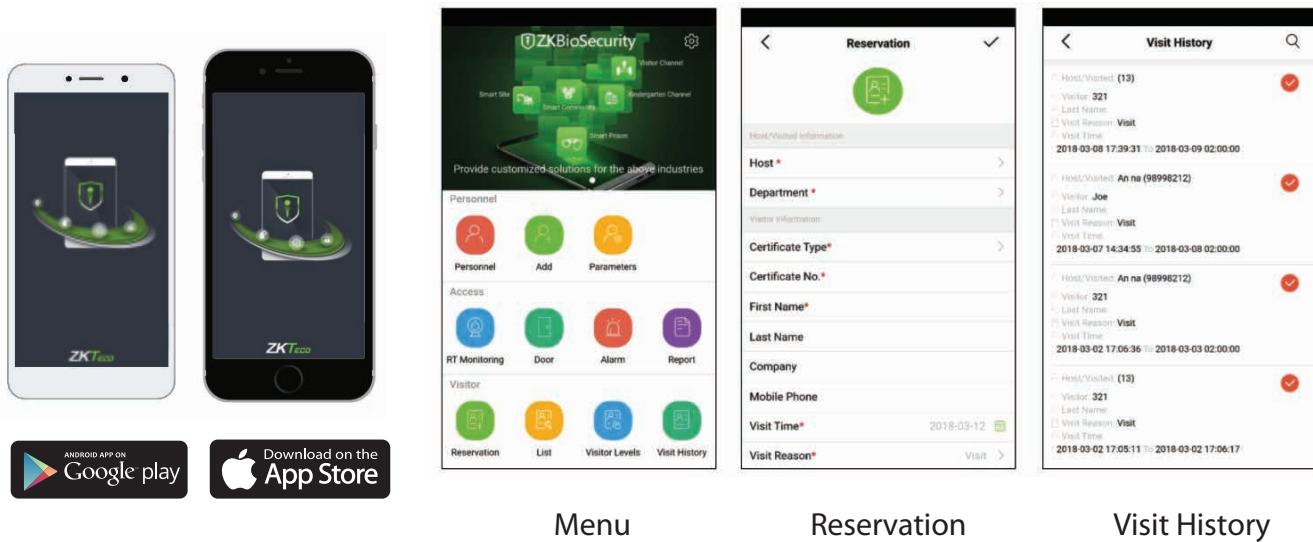

Report

Visitor module can summary useful information of visitor last visited location and visitor history.

Support iPhone and Android APP

Offers mobile visitor reservation and registration functions, including names, phone numbers, timeslots of visits. Users may also review reserved visitors' status and detailed visitor records with ZKBioSecurity App. anytime.

* Users may download ZKBioSecurity App. via App Store on iOS or Google Play Store on Android

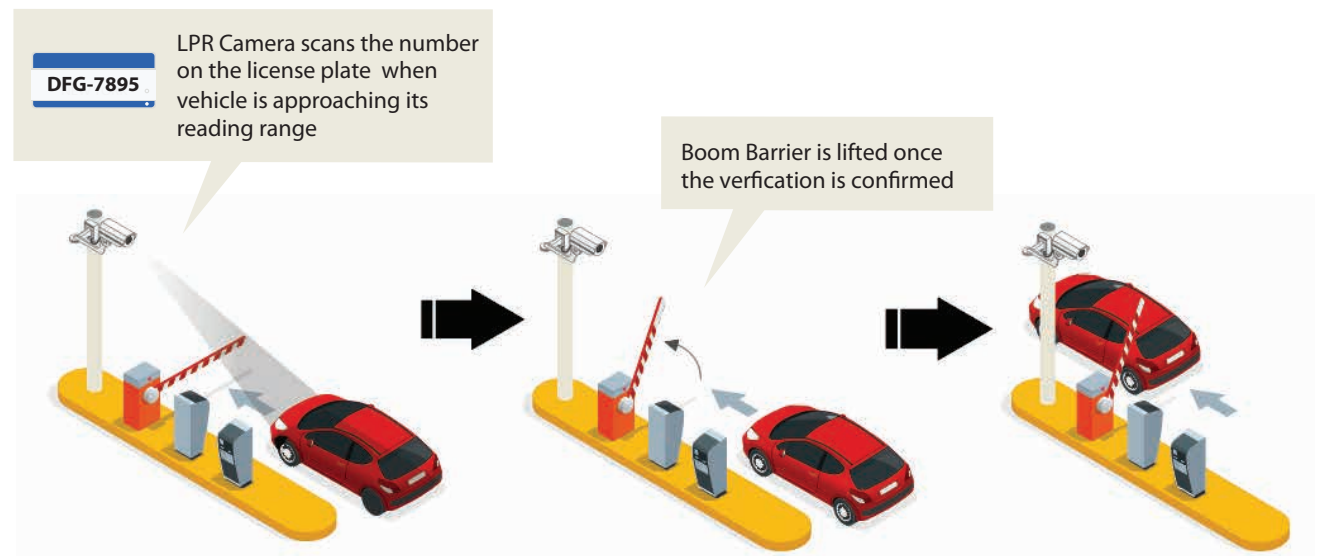

Parking Management

Automatic and intelligent vehicle management effectively and accurately monitors and manages vehicles at all exits and entrances via different criteria.

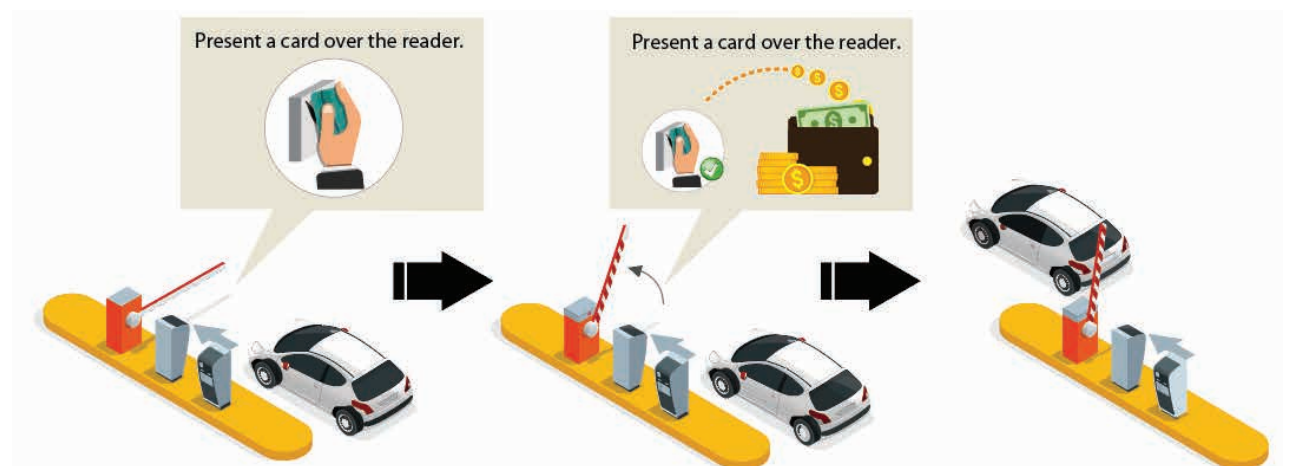

Automatic License Plates Verification (with LPR camera)

LPR technology is an application of computer video image recognition technology in license plate identification area. Its operation starts when the vehicle is located at the entrance of the parking lot, the LPR camera will scan on the license plate characters, and its recognition technology will identify the license plate number, color and other information. If the number on the license plate is valid, the car park barrier will lift for access, otherwise, no access will be allowed.

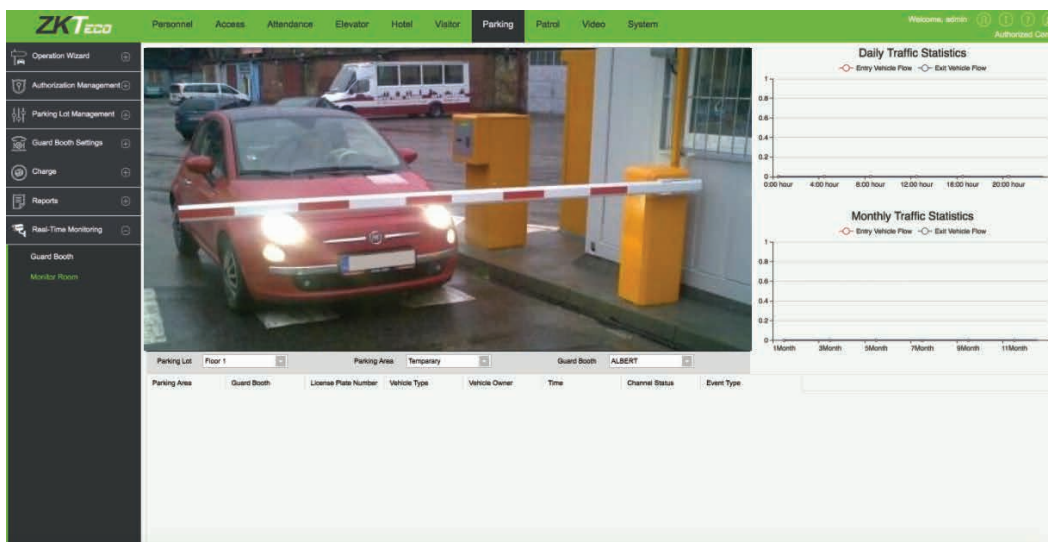

Payment and Charge Management

ZKBioSecurity offers an advanced option for users to pay on their parking when they are entering into the car park. Users may simply present cards at the entrance, and pay charges when leaving the car park.

Real Time Parking Lot Monitoring

It provides an additional function for administrators to have a real time monitoring in the monitor room, you can check video images and entrance and exit information of all guard booths in all parking lots.

Report

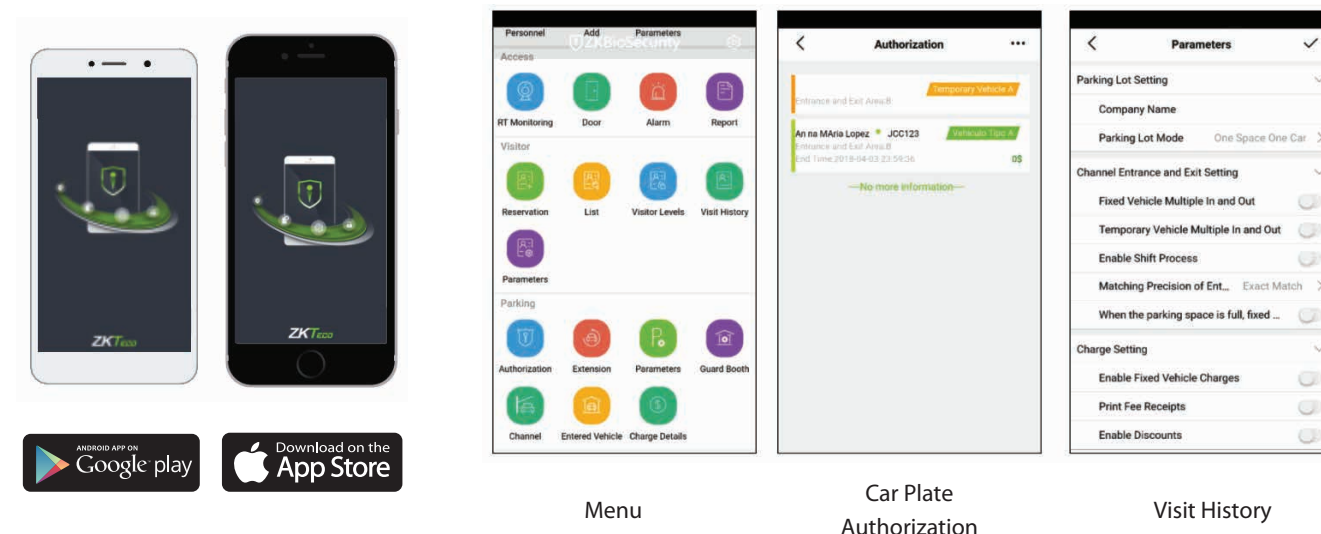

As an utilized LPR parking management system, the ZKBioSecurity parking module provides numbers of detail report, license plate report, charge details, vehicles in parking lot, daily and monthly reports, etc.

Support iPhone and Android APP

Provides mobile remote car access authority distribution function (designated time/date/entrance & exit), details of overtime parked cars can be reviewed in reports for prompt re-distribution / update of valid parking periods. Users may also define monthly parking cars as fixed vehicles or hourly parking cars with temporary vehicles for the convenience of the setting of charges and effective periods.

License Plate Recognition (LPR) enables license plate image capturing, users may review all details of present cars' parking status and car parking history in mobile device.

* Users may download ZKBioSecurity App. via App Store on iOS or Google Play Store on Android

Guard Patrol Module

The Online guard patrol module is a new cost effective way to accomplish guard patrol management, ZKBioSecurity can use the access control terminals and controllers (readers) to act as guard patrol check-in points, end users do not need to carry out another set of equipment for guard patrol management. Moreover, the ZKTeco terminals and readers offer biometric technology to enhance the security level for the guard patrol, This module can be used in some specific vertical industry like prison, airport etc.

Management

Guard Patrol is an efficient module to manage your security guards completing all their patrols at the correct time. Our guard tour system uses the latest technology to allow you to accurately monitor the times of patrols and when key areas have been visited. The system works by installing the access control at areas around the building to be checked. Security guards swipe their own smart card or other biometric authentication to these points to record the time visited. Using the existing access control and time attendance, it reduces costs and ensures patrol tasks are completed.

Online with Access Control (Cost Effective)

The security guards have to identified their own checkpoints to officer performing the patrol to note any incidents or observations. Using the ZKTeco access control with the powerful software ZKBioSecurity, enterprise no longer need to install the traditional guard patrol system (Location Tag), administrators can cut cost on the security's budgets.

Real-Time Patrol Monitoring and Check-Point Route

ZKBioSecurity provides the scheduled routes of the current day in the patrol plan. When the patrol security guards check-in based on the plan, the corresponding checkpoints in the patrol route will turn green. If the security guards don't check-in according to the plan, the checkpoints will turn red.

Normal

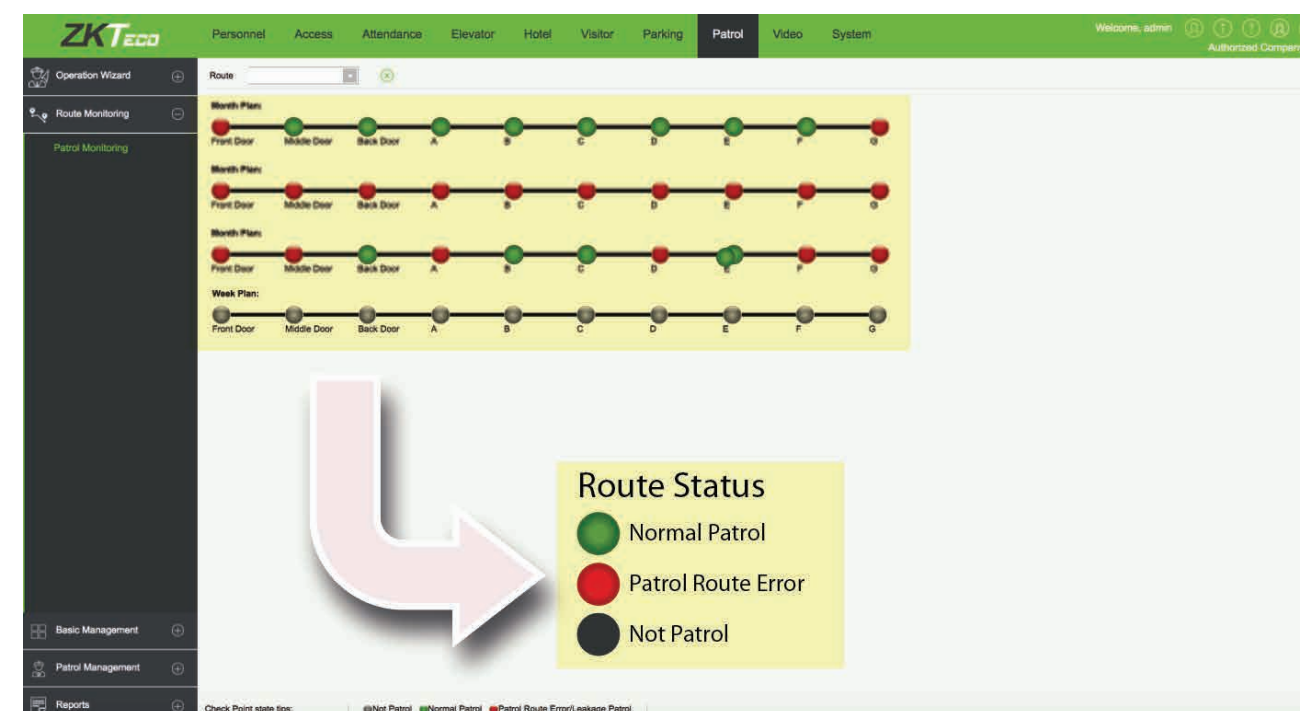

The patrol guard finished the patrol in the normal time segment and sequence.

Patrol Route Error

The patrol guard finished the patrol in the normal time segment but in wrong route.

Not Patrol

The patrol personnel did not Finish the patrol in the normal segment, that is the patrol guard did not finish the patrol route.

Report

In order to let administrators have a more detailed view of the patrol guard performance, the patrol module provides many useful reports, including all patrol transaction, patrol records, patrol route statistic, patrol personnel statistic.

Video Linkage

For high level security demand, a video surveillance management platform is essential to most of the premises. ZKBioSecurity provides a video linkage module which supports real time video and query video records, real time video pop-up alert when linkage event occurs. Moreover, this module can integrate with 3rd party cameras through private protocol and ONVIF. This module can also interact with other ZKBioSecurity module such as, access control, elevator control, visitor, patrol, parking, hotel.

Video Preview

The video linkage module allows users to connect multi-camera channels for preview. It supports up to 16 channels viewing mode in single interface.

Fully Integrate 3rd Party IPC/DVR/NVRs

Currently ZKBioSecurity software supports ZKVision (W, P, E series), GT/PT Series, Hikvision, Dahua, through private protocol integration, and using ONVIF to connect other cameras and NVRs.

Supports ONVIF

ONVIF is an open industry standardized interface for IP-based physical security products, ZKBioSecurity is using ONVIF for most of the 3rd party cameras and NVRs integration to enlarge its extensive ability.

Video Event Record

To maximize the working efficiency of the administrators, the video surveillance module provide detailed event records in terms of photos and videos listed accurate time and triggered location with playback.
