## Lab Demonstration:

Using a string, a rock, a meter stick, and a wristwatch to determine the acceleration of Earth's gravity

## Pendulum Formula:

$$
g=l(2 \pi f)^{2}
$$

Where:
$\boldsymbol{g}=$ acceleration of gravity ( $\mathrm{m} / \mathrm{sec} 2$ )
$\boldsymbol{f}=$ frequency (cycles/sec or Hertz / Hz)
$\boldsymbol{l}=$ length of pendulum (meters)
