High-Performance Toys.

For intense pleasure driving in the water.

For people looking for ultimate fun and enjoyment in their lives, we've constructed the three most thrilling water sleds in the world.

The outstanding features of the SEABOB F5 are its unanticipated agility in the water and the extremely low vehicle weight of only approximately 29 kg. The low weight of the SEABOB F5 makes for optimal handling properties.

The SEABOB F5 S is also a lightweight device tipping the scales at approximately 34 kg. It distinguishes itself by means of its strong driving performance and its irrepressible propulsion in the water.

The SEABOB F5 SR is extremely powerful and, with a vehicle weight of 34 kg, is undoubtedly the premium model of the SEABOB F5 series. This watercraft boasts impressive propulsion.

Neither vehicle requires a driving licence and their electrical drive make them completely ecologically sound. High-Performance Toys for intense fun in the water and emission-free for zero impact on the environment.

E-Jet Power System.

Emission-free drive technology.

The worldwide-patented E-Jet Power System works according to the principle of water displacement. The water is sucked in by the powerfully rotating impeller and forced out in the jet channel under high pressure. The thrust developed in this way propels the SEABOB forward in a superior fashion.

Maximum thrust requiring little energy makes the E-Jet Power System a unique drive mechanism for powerful watercraft. Thanks to its electro-technology, the system is absolutely environmentally friendly and offers extremely low operating costs.

Play without Limits.

Feel the exhilaration.

If you are looking for the ultimate driving pleasure, simply head for the water. No boundaries, no limits. Experience vast open spaces and pure freedom with the SEABOB. Whichever gear you have selected, you will gain an unforgettable driving experience.

Speed is regulated via the Controlgrip. The enormous thrust generated between the power levels lends the SEABOB a dynamism and fascination beyond compare.

High-tech across the board.

Quality right down to the last detail.

The SEABOB-Jet is an absolute paragon of cutting-edge technology. In order for the vehicle to live up to this claim, the drive unit was made using premium carbon elements, established ceramic coatings and precious metals resistant to salt water. Meticulously hand-crafted, this water-sports vehicle is made of top-grade materials. The uncompromising quality standard is reflected in each and every detail.

Rediscover the Element.

Intense and irrepressible.

A SEABOB offers all-round high-performance. Its hydrodynamic shape provides an astounding degree of agility in the water. Steering and diving could not be easier – all it requires is for the pilot to shift his bodyweight.

Whether you are cruising, zipping through the water or diving, the SEABOB will glide powerfully along with you aboard. Feel the awe-inspiring manoeuvrability and the newly-found desire for water which will never relinquish its hold on you again.

Unlimited riding pleasure.

Relaxed or intensive.

Leisurely gliding. Sporty driving in the water. Safe diving under water. All this is possible with a SEABOB. Now you can actually move through the water like a fish. Freely, both on the surface and at depth.

At the same time, the SEABOB is completely environmentally friendly when in its element. It zooms powerfully and almost silently through the water. Man and machine in perfect harmony.

Anything is possible.

Experience a unique agility under water.

The dynamism of the SEABOB-Jet develops its special appeal under the water. The watercraft can be steered down into the depths simply by applying light pressure. Man and machine in unison, darting nimbly around.

Impressive diving depths of up to 40 meters can be programmed to suit individual requirements via the on-board electronics. A safety cut-off feature reliably ensures that the selected diving depth is not exceeded.

Dive into the fascinating underwater world!

Dive into a new dimension.

The underwater world awaits.

You will experience a performance never known before when you dive. Whether long or short distances, diving with the SEABOB is pure fascination.

A dive with the SEABOB will become an unforgettable experience. Drive through the expanse of the underwater world with indescribable dynamics. Each ride with the SEABOB is a unique adventure. Experience it.

Optimal handling.

Low weight with powerful thrust.

Easy handling was the uncompromising objective set when developing the new SEABOB generation. For this reason, the challenge in terms of development was clearly defined. Low overall weight. Extremely stable housing. Powerful drive. These properties make the SEABOB a unique water-sports craft. The vehicle can be used anywhere and offers optimal handling.

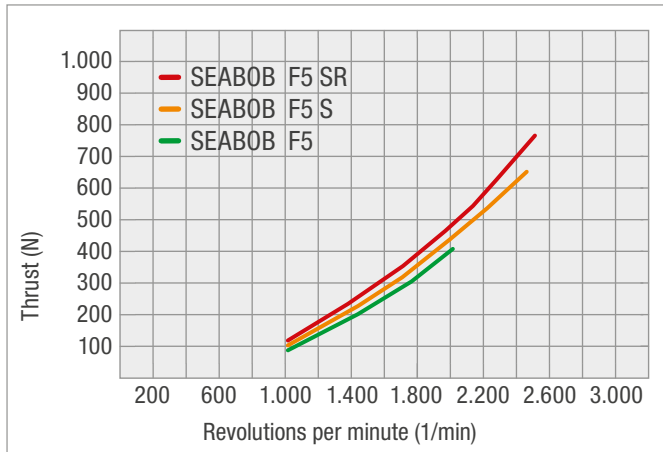

The Technology.

A development with responsibility for the environment.

The specially developed, high-performance electric-drive mechanism with its environmentally friendly technology is an exemplary innovation.

The motor is a high-torque synchronised drive unit featuring a microprocessor-controlled 3-phase sinus power management system. The application of cutting-edge technology enables this motor to achieve the ideal amount of torque with outstanding efficiency. All this, and yet the overall design remains very compact.

The power for the drive mechanism is provided by highly efficient Lithium-Ion accumulators. These high-performance special accumulators are a top-class quality component in the propulsion concept of the SEABOB.

The Controlgrips.

Switch gears for power. Determine the direction.

A SEABOB is the absolute embodiment of state-of-the-art technology. The pilot steers his water-sports craft via two intelligent Controlgrips with Piezo technology.

The drive mechanism is activated by squeezing the trigger. Applying light pressure to the green sensor accelerates the device in continuous powerful thrusts until the desired speed is reached. Propulsion is reduced by pressing the red sensor, thereby slowing the SEABOB down. If required, the craft can be brought to an immediate stop simply by releasing the trigger.

Two further Piezo buttons enable the pilot to program an individual data menu. This includes the electronically-controlled setting of the diving depth, operation time and additional parameters.

The Cockpit.

Clear view. Perfect control.

The central cockpit is located exactly in the driver's field of vision. All the important technical data from the engine electronics is shown accurately via the TFT color display.

It provides the pilot with information on the current driving performance and the selected power level. The accumulator charge state allows you to reliably keep track of the residual capacity.

Furthermore, the driver receives up-to-date information regarding his diving depth and water temperature. The programming functions of the menu can also be conveniently controlled via the TFT display.

SEABOB Cam.

Capture unique experiences.

The SEABOB can be equipped with integrated camera technology on request. Thereby, two camera systems are integrated in the SEABOB. There is a full-HD camera as a recording system in the watercraft's bow. This camera films and saves everything experienced and discovered in the fascinating underwater world at the push of a button.

Another full-HD camera is found on the information display. This camera is an integrated Action-Selfie-Cam and is activated by simply pressing a sensor. It saves all of the pilot's recordings when driving the SEABOB. With the recording technology switched on, the SEABOB information display performs the monitor function. This allows all the camera recordings to be professionally controlled.

All the recordings are saved in the SEABOB on-board system and can be directly transmitted to any smartphone or other mobile devices with Wi-Fi technology. With the SEABOB-Camsystem, you can always share your unique experiences in the fascinating underwater world with others at any time.

SEABOB F5

SEABOB F5

One particular distinguishing feature of the SEABOB F5 is its extremely low weight. Tipping the scales at just 29 kg, the craft boasts a propulsive force of 480 newtons. The E-Jet Power System in the SEABOB F5 is controlled at 4 power levels. These increments lend it a sporty character and guarantee great fun and pleasure. Its special degree of dynamism in the water results from the craft's high performance, coupled with the low power-to-weight ratio. The outstanding properties of the SEABOB F5 in terms of handling make it suitable for use in water anywhere. It is at home in the sea. It offers an outstanding performance on the surface of the water and when diving. Owing to its extremely high degree of manoeuvrability, the SEABOB F5 can be enjoyed in both small and large pool complexes.

SEABOB F5 S

SEABOB F5 S

The SEABOB F5 S is an ultimate high-performance watercraft. Weighing just 34 kg, the vehicle is extremely easy to handle out of the water, too. The SEABOB F5 S boasts a strong propulsive force of 680 newtons in the water.

The E-Jet Power System is controlled at 6 power levels. The gears of the SEABOB F5 S allow you to glide along at a relaxed pace in a low gear or, for more ambitious high-speed driving, switch up to 6th gear. The watercraft has a highly sporty character and stands out in terms of its extraordinary dynamism. Its sporty appearance is emphasized by elements in a matt chrome design. The SEABOB F5 S is at home in the sea, and its high degree of manoeuvrability also makes it ideally suited for use in larger pool complexes.

SEABOB F5 SR

SEABOB F5 SR

The SEABOB F5 SR is the most powerful watercraft in the SEABOB F5 series. Its driving performance is unparalleled. With 745 newtons, the SEABOB F5 SR's E-Jet Power System produces a strong propulsive force. The engines output is controlled by 7 different power levels. Cruise through the water at a relaxed pace in a low gear. In the higher gears, experience and feel the F5 SR's impressive propulsion through the water.

In addition to its strong engine power, the SEABOB F5 SR offers high-quality special equipment. In the series, it is equipped with the high-quality Chrome package or optionally with Black package.

You have the option to finish the SEABOB F5 SR with one of the surfaces from our entire color range without any extra charge. Moreover, the SEABOB F5 SR has two rear fins for driving stability. These rear fins once again improve the manoeuvrability during diving excursions and emphasize its sporty design.

The Colors.

Make your choice.

The SEABOB serial colors have a robust surface. These wear-resistant colors are uniquely designed to provide the utmost protection thanks to a special surface technology. Make your choice and give your SEABOB a robust surface with these colors in a basic version.

We also offer you an exclusive color choice with the special colors, which are applied as a complex multiple-layer paint system. These high-gloss colors give every SEABOB a powerful sporty overall look.

The Silver Line design is available for the SEABOB F5 SR model series in combination with the Chrome Package.

Further additional colors are available on request.

Bright Color & Bicolor Design.

Intensity in expression.

The Lumex Bright Colors are high-gloss surfaces in intense luminous colors. The SEABOB attracts even more attention because of them. A great look for improved safety. These colors offer visual protection when driving fast through the water and when suddenly emerging from the depths.

The Black Line Design is available for the SEABOB F5 SR model series in conjunction with the standard rear fins. See description of the Black Line Design on page 40.

All high-gloss colored surfaces are created by hand using high-quality multiple-layer paint systems. They are a special, expressive feature of your SEABOB, giving it a unique and sporty character.

It's Time for Black Line.

The Black Line Design is a new color combination for the SEABOB F5 SR. This version emphasizes the sporty design of the SEABOB in prominent places with a high-gloss black color.

This color design is available for the SEABOB F5 SR in three versions.

Black Line Green

Black Line Orange

Black Line Blue

Exclusive in design.

Unique and individual.

We offer you a number of fascinating design options to refine your SEABOB. You can give it your own personal touch in the color and surface design. Design your SEABOB according to your own demands. Tell us about your special requests. We will see what we can do to ensure your SEABOB exudes even more fascination.

Chrome package: Display console and tail in matt chrome design

Black package: Display console and tail in matt black design

Special Editions: Hard Rock Hotel Ibiza and Ushuaïa Ibiza Beach Hotel

Technical data and equipment.

Designation	Technical description
Shell	Hard-integral plastic technology
Motor	Performance up to
Drive	Maximum thrust from E-Jet Power System up to
Speed	Depending on conditions over water up to Depending on conditions under water up to
Motor control	Electronic speed control at 4, 6 or 7 power levels between 0% and 100% via Piezo buttons
Energy	High-Energy Lithium-Ion accumulators, total capacity approx.
Operating time	Average
Charging time	Standard charging approx. Quick charging approx.
Steering	By simply shifting body weight (left – right, down – up, over and under water)
Stopping	Releasing the trigger causes the water resistance to stop the SEABOB within an extremely short distance
Diving depth	Safety cut-off by the built-in depth sensor at a water depth of Electronic control system can be set to maximum water depth of
Dimensions	L × W × H (in mm)
Weight	Approx.
Buoyancy in water	Approx.
Special equipment	Securing device for Pilot belt system
Extras	Elements in a matt chrome design
