

**Parts List** 

Item	Qty
Skid Plate	1
Mounting Bolts	4
Threaded Clips	4

## **FX Nytro Skid Plate Installation Instructions**

- 1. After removing the large side panels remove the factory skid plate and both left and right side lower panels.
- 2. Remaining on bottom there is a left and right side trim piece. Remove the section in red as shown below.

3. On each lower panel measure in 1.5" from the inner edge and then draw a line. This strip then needs trimmed off of each lower side panel. Section outlined in red as shown below needs removed.

- 4. Install lower panels onto sled again. Do a trial fit up with the skid plate to ensure it sits flat against the subframe. If it does not, trim plastic where needed.
- 5. There are (4) tabs on lower subframe with holes in them. Install a threaded clip on each tab. The threads need to be on the top side towards oil pan.
- 6. Install the skid plate using the (4) bolts supplied. Get each bolt started before tightening any.
