

**NEW ORGANISMS IN  
HEALTHCARE**

**WHEN TO PANIC, WHEN TO CARRY ON**

Jim Gauthier, MLT, CIC  
Senior Clinical Advisor, Infection Prevention  
May 2021  
New Mexico APIC

---

---

---

---

---

---

---

---

**DISCLOSURE**

- Jim is employed by Diversey. His expenses to present this webinar (salary) are paid by this company. Diversey has had no input into this presentation from a commercial interest.

APIC | 2021 STRATEGIC PARTNER PLUS

---

---

---

---

---

---

---

---

**OBJECTIVES**

- Discuss the frequency of new organisms in the healthcare world
- Describe the difficulty (or ease) of killing new organisms with disinfectants
- Explain how to use the Chain of Transmission when answering questions

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

The main buckets of microorganisms

<b>Bacteria</b>	Gram Positive Gram Negative	<i>Staphylococcus</i> <i>E. coli</i>
<b>Spores</b>	Resistant form of bacteria	<i>Clostridioides difficile</i> , <i>Bacillus anthracis</i>
<b>Viruses</b>	Envelope or Non-envelope	Influenza, Rhinovirus, HIV, HBV, Norovirus
<b>Fungi</b>	Multicellular	<i>Trichophyton</i> , <i>Aspergillus</i>

---

---

---

---

---

---

---

---

- WHO HAS BEEN THE ENEMY?
- Bacteria
    - *Staphylococcus aureus*
      - MRSA
    - *E. coli*, *Klebsiella pneumoniae*
      - ESBL, CRE
    - Enterococcus
      - VRE
    - Clostridium/Clostridioides sp.
      - Gas gangrene, CDI

---

---

---

---

---

---

---

---

### WHO HAS BEEN THE ENEMY?

- Enveloped Viruses (Easy to Kill)
  - HIV, Hepatitis B&C, Influenza, Parainfluenza, RSV
- Non-Enveloped Viruses (Not Easy to Kill)
  - Norovirus, Rhinovirus, Hepatitis A
  - Large non-enveloped are easier
    - Rotavirus, Adenovirus

---

---

---

---

---

---

---

---

### WHO HAS BEEN THE ENEMY?

- Fungi
  - Candida
    - *albicans*, *glabrata*
  - Aspergillus, Tinea sp. (Athlete's Foot), Cladosporium

---

---

---

---

---

---

---

---

### WHO WAS/IS THE NEW ENEMY?

- |                     |                                    |
|---------------------|------------------------------------|
| ○ SARS-CoV-1        | ○ Zika                             |
| ○ pH1N1 Influenza A | ○ <i>Elizabethkingia anopheles</i> |
| ○ MERS-CoV          | ○ <i>Candida auris</i>             |
| ○ Ebola             | ○ Hepatitis A                      |

## SARS-CoV-2

---

---

---

---

---

---

---

---

### SARS-CoV-2

- Causes **Coronavirus Disease 2019** (COVID-19)
- Human to human spread
  - Appears Contact/Droplet
  - New terminology re: 'by the air'
- Updates daily
  - ProMed (<https://promedmail.org/>)
  - <https://www.worldometers.info/coronavirus/>

---

---

---

---

---

---

---

---

### COVID 19

- Global pandemic declared by WHO March 11, 2020
- Basically in every country of the world
  - Varying success in controlling
  - Mar 25, 2021: 30.7 mil, ~559,000 deaths (1.82%)
    - NM: 190,275 cases, 3,909 deaths (2.1%)
  - Apr 28, 2021: 32.9 mil, ~587,000 deaths (1.78%)
    - NM: 196,997 cases, 4,039 deaths (2.05%)

---

---

---

---

---

---

---

---

### PANIC [PAN-IK]

- noun
- 1. a sudden overwhelming fear, with or without cause, that produces hysterical or irrational behavior, and that often spreads quickly through a group of persons or animals.  
[www.dictionary.reference.com](http://www.dictionary.reference.com)

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

### HISTORY OF PANIC

- “My heart is in anguish within me; the terrors of death have fallen on me. Fear and trembling have beset me; horror has overwhelmed me...”
  - Psalm 55:4-5

---

---

---

---

---

---

---

---

### SARS-CoV-2 – THE OUTSET!

- Sporting events cancelled
- Communities quarantined
- Toilet paper hoarding (?)
- No samples at Costco?

---

---

---

---

---

---

---

---

### SARS-CoV-2 CHANGES

- No Mask, Wear mask
  - Evidence of asymptomatic and pre-symptomatic carriers
- Double mask...
- Droplet vs Airborne spread
  - Stay tuned!

---

---

---

---

---

---

---

### IS IT HYPE? FEAR-BOLA!

- It's a hyper-contagious disease that affects the brain, making sufferers fear a widespread Ebola outbreak in the United States.
- Fear-bola is an airborne disease that spreads through conversation, entering your brain through your ears.
- Fear-bola is so contagious that some victims have contracted it by simply seeing images and videos about Ebola.

Mel Robbins <https://www.cnn.com/2014/10/15/opinion/robbins-ebola-fear>

---

---

---

---

---

---

---

### NOT THAT LONG AGO - 2003

- Severe Acute Respiratory Syndrome (the original)
  - Guangdong Province China
  - Hong Kong
  - Toronto
- ProMed

---

---

---

---

---

---

---

---

---

---

---

---

---

---

LET'S GO BACK...WAY BACK...

Grade 10 and Rocking It!

---

---

---

---

---

---

---

---

### PENICILLIN RESISTANCE

- *Staphylococcus aureus*
- Mortality before 1940 for bacteremia >80%
- Penicillin mass produced in 1938
- Resistance seen in 1942
  - By late 1960's, >80% resistant to penicillin

(Lowy 2003)

---

---

---

---

---

---

---

---

### PENICILLIN MOLECULE

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

METHICILLIN RESISTANCE

- Semi-synthetic penicillin (along with Cloxacillin)
- Developed in 1961
- Resistance seen by 1962
- Spread was rapid through Europe

---

---

---

---

---

---

---

---

METHICILLIN RESISTANCE

- First reported case in US was 1968 (NIAID)
- First outbreak in Canada was reported in 1981

(Simor 1997)

---

---

---

---

---

---

---

---

### MRSA BRITISH COLUMBIA

- First case – Canadian returning from India
  - Clinical specimen
  - Found two floors up, one floor down
- End of the world as 'they' knew it!

---

---

---

---

---

---

---

### MRSA NELSON, BC

- Probably mid 90's
- Much the same!

---

---

---

---

---

---

---

### HUMAN IMMUNODEFICIENCY VIRUS (HIV)

- 1981 reports of Karposi's sarcoma and *Pneumocystis carinii* in men who had sex with men (MSM)

(MMWR 1981 June, July)

---

---

---

---

---

---

---

### HIV PANIC

- LGBTQ Community
- Children at school (hemophiliacs)
- Healthcare workers refusing to provide care
- First Responders wanting list of known HIV positive people

---

---

---

---

---

---

---

---

### HIV OUTCOME

- Led to Universal Precautions, Body Substance Precautions and most recently:
  - Standard Precautions
  - Routine Practices and Additional Precautions (RPAP) 
- Safety needles

---

---

---

---

---

---

---

---

### VRE

- First seen in 1986, reported in 1988 (Uttley 1988)
  - Cluster, probably related to the use of Vancomycin and Cefazidime as treatment of acute undiagnosed sepsis
- Spread went worldwide
- Fear of transfer of resistance to Group A Streptococci

---

---

---

---

---

---

---

---

### CLOSTRIDIODES DIFFICILE

- First identified in culture in 1935
- First reported as cause of pseudomembranous colitis in 1974
- Has toxin mediated issues
- Spore allows long environmental survival (Bartlett 1994)
- Name Change 2016! (Lawson 2016)

Do you need a sporicide everywhere? – See Resources!

vaccinenewsdaily.com

---

---

---

---

---

---

---

---

---

---

---

---

---

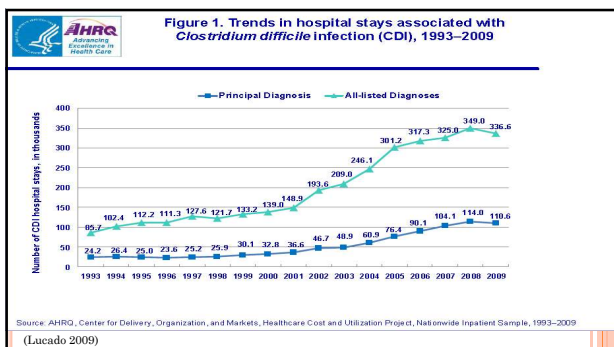

---

---

---

---

---

---

---

---

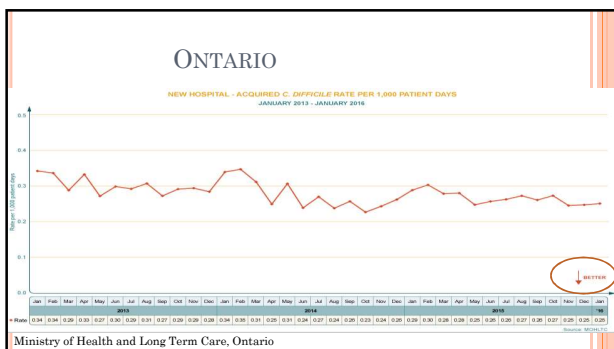

---

---

---

---

---

---

---

---

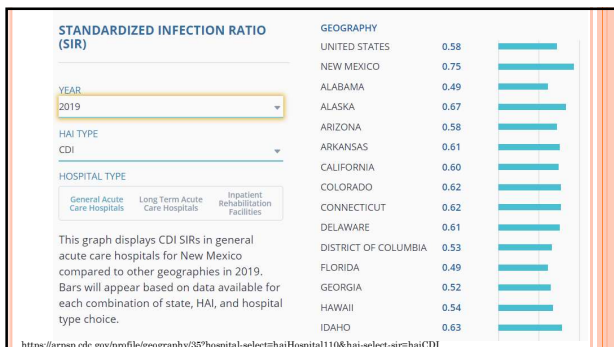

---

---

---

---

---

**GRAM NEGATIVE RESISTANCE**

- Extended spectrum beta lactamase (ESBL)
  - Breaks down the beta lactam ring
  - Emerges and changes as our antibiotics change (third and fourth generation Cephalosporins) (Bradford 2001)

---

---

---

---

---

---

---

---

---

---

**GRAM NEGATIVE RESISTANCE**

- Carbapenemase
  - Enzyme attacks carbapenem antibiotics: meropenem, imipenem, ertapenem
  - CRE: Carbapenem Resistant Enterobacteriaceae
    - May not be an enzyme mechanism!
  - CPE: Carbapenemase Producing Enterobacteriaceae
  - CP-CRE: Carbapenemase Producing - Carbapenem resistant Enterobacteriaceae
    - Plasmid spread possible
  - CPO: Carbapenemase Producing Organism

---

---

---

---

---

---

---

---

---

---

### CANDIDA AURIS (SCHWARTZ 2018)

- Has spread rapidly around the globe
- Can cause invasive disease with high mortality rates
- Frequently resistant to one or more classes of antifungals
- Difficult to identify in some clinical microbiology laboratories.
- Prolonged colonization of patients' skin and contamination of surrounding environments
- Nosocomial outbreaks in hospitals and long-term care facilities

(Schwartz 2018) (Prestel MMWR 2020)

---

---

---

---

---

---

---

---

So?

- There are always going to be new organisms
- Look at horizontal Infection Prevention and Control, not vertical

---

---

---

---

---

---

---

---

### HORIZONTAL VS VERTICAL INFECTION CONTROL

Controlling Healthcare Associated  
BSI: Vertical vs Horizontal  
Approach

Wenzel 2010

---

---

---

---

---

---

---

---

### VERTICAL

- Focus on a single pathogen or anatomic site
- Pathogen specific
  - MRSA
  - VRE
  - ESBL
  - CRE
  - Acinetobacter
  - Candida

43

---

---

---

---

---

---

---

---

### HORIZONTAL VS VERTICAL INFECTION CONTROL

Controlling Healthcare Associated  
BSI: Vertical vs Horizontal  
Approach

44

Wenzel 2010

---

---

---

---

---

---

---

---

### HORIZONTAL

- Reduce rates of all infections for all pathogens
- Hand hygiene program
- Decolonization therapies (Chlorhexidine bathing)
- Board to ward (Nat Audit Office 2009)
- Antibiotic Stewardship Programs
- Standardized cleaning and disinfection

45

---

---

---

---

---

---

---

---

### VERTICAL ISSUES

- Can cause confusion
  - Contact / Enhanced Contact / Contact Plus
  - Contact, Airborne with a mask
  - Contact/Droplet/Airborne
  - Alcohol based hand rub or soap and water?

---

---

---

---

---

---

---

---

### HOW TO HANDLE QUESTIONS

- 🙄

---

---

---

---

---

---

---

---

---

---

---

---

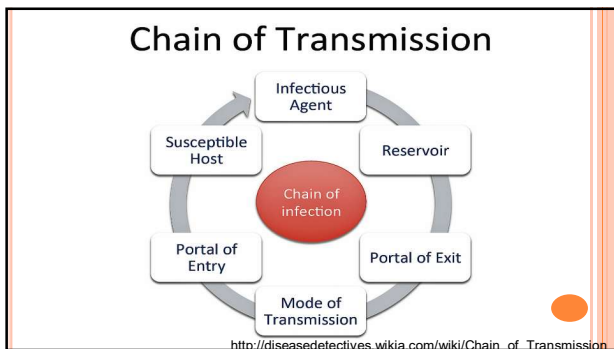

---

---

---

---

---

---

---

---

---

---

---

---

### RESERVOIR

- The organism/area where the infectious agents reside
- Humans
  - SARS-CoV-2 Respiratory Tract
- Animals
  - Possible for cats to get, not spread
- Food Chain
- Environment

Chain of Infection

---

---

---

---

---

---

---

---

### RESERVOIR – BREAKING THE LINK

- **Hand Hygiene** – remove the organism before it is placed near or on another person or surface, or infect ourselves
- **Disinfection** – kill the organism on the surface
- **Pre-operative skin prep** – remove and kill organisms
- **Engineering** – Redesign sinks

---

---

---

---

---

---

---

---

### PORTAL OF EXIT – SARS-CoV-2

- Cough
- Sneeze
- Talk (loud) or singing
- Aerosol-generating procedures
  - Can vary by jurisdiction/specialty

---

---

---

---

---

---

---

---

### BREAKING THE PORTAL OF EXIT

- Masks
  - Home made
  - Surgical
- Covering coughs, sneezes

---

---

---

---

---

---

---

---

### MODE OF TRANSMISSION

- Method by which the pathogen gets from the reservoir to the new host

---

---

---

---

---

---

---

---

### MODE OF TRANSMISSION - CONTACT

- **Direct**
  - Contact between infectious agent and susceptible host
- **Indirect**
  - Contact of a fomite (surface) then contact of susceptible host
- **Mode**
  - Equipment
  - Hands
  - Sex (not COVID!)

---

---

---

---

---

---

---

---

### MODE OF TRANSMISSION – PERCUTANEOUS

- Needlestick

---

---

---

---

---

---

---

---

### MODE OF TRANSMISSION

- |                                                                                                                                                                                  |                                                                                                                                                                                    |                                                                                                                                               |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> <li>○ <b>Droplet</b> <ul style="list-style-type: none"> <li>• Particle size &gt;5um</li> <li>• Cough</li> <li>• Sneeze</li> </ul> </li> </ul> | <ul style="list-style-type: none"> <li>○ <b>Airborne</b> <ul style="list-style-type: none"> <li>• Particle size &lt;5um</li> <li>• Cough</li> <li>• Singing</li> </ul> </li> </ul> | <ul style="list-style-type: none"> <li>○ <b>Of the Air</b> <ul style="list-style-type: none"> <li>• Size not important</li> </ul> </li> </ul> |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|

---

---

---

---

---

---

---

---

### MODE OF TRANSMISSION

- **Common Vehicle**
  - Food
  - Water
  - Medication vial
- **Vector-Borne**
  - Mosquitos
  - Flies
  - Lice
  - Ticks

---

---

---

---

---

---

---

---

### MOT- BREAKING THE LINK

- **Direct/Indirect**
  - Hand Hygiene
  - Environmental disinfection
  - Personal Protective Equipment (PPE)
  - Isolation of infected patients
  - Not in contact with others when ill/contagious

---

---

---

---

---

---

---

---

### MOT – BREAKING THE LINK

- **Droplet/Airborne**
  - Face protection (mask, respirator(?), goggles, shield)
  - Airflow (Airborne Infection Isolation Room - AIIR)
  - Air exchanges

Brown J, et al. A quantitative evaluation of aerosol generation during tracheal intubation and extubation. Anaesthesia 2020. <https://associationofanaesthetists-publications.onlinelibrary.wiley.com/doi/epdf/10.1111/anae.15292>

---

---

---

---

---

---

---

---

### PORTAL OF ENTRY

- Eyes, nose, mouth (T-Zone)

---

---

---

---

---

---

---

---

### BREAKING THE PORTAL OF ENTRY

- Masks and eye protection

abc3340.com/

Guardian.com

Medicom.com

---

---

---

---

---

---

---

---

### SUSCEPTIBLE HOST

- SARS-CoV-2
  - Elderly
  - Obese
  - High blood pressure
  - Lung issues
  - Metabolic issues (diabetes)
  - Heart Issues
  - Multi-system Inflammatory Syndrome
    - Children...

---

---

---

---

---

---

---

---

### CHAIN OF TRANSMISSION

- Helps explain the risk
- Helps calm some of the panic

---

---

---

---

---

---

---

---

### WHAT BROKE THE CHAIN?

- **Disinfectants**
  - Variety of kill ability
  - Low Level to High Level
  - Sporicidal
  - EPA Emerging Viral Pathogen Document
- **Label Claim**
  - Surrogate/marker organisms
  - Can't have 'em all!

[https://www.epa.gov/sites/production/files/2016-09/documents/emerging\\_viral\\_pathogen\\_program\\_guidance\\_final\\_8\\_19\\_16\\_001\\_0.pdf](https://www.epa.gov/sites/production/files/2016-09/documents/emerging_viral_pathogen_program_guidance_final_8_19_16_001_0.pdf)

---

---

---

---

---

---

---

---

### WHAT BROKE THE CHAIN?

- Hand hygiene
- Personal Protective Equipment

---

---

---

---

---

---

---

---

### The main buckets of microorganisms

<b>Bacteria</b>	Gram Positive Gram Negative	<i>Staphylococcus</i> <i>E. coli</i>
<b>Spores</b>	Resistant form of bacteria	<i>Clostridioides difficile</i> , <i>Bacillus anthracis</i>
<b>Viruses</b>	Envelope or Non-envelope	Influenza, Rhinovirus, HIV, HBV, Norovirus
<b>Fungi</b>	Multicellular	<i>Trichophyton</i> , <i>Aspergillus</i>

---

---

---

---

---

---

---

---

### EFFECT OF DISINFECTANTS ON MICROORGANISMS

Organism	Type	Examples
Bacterial Spores	Spore	<i>Bacillus anthracis</i> , <i>Clostridioides difficile</i>
Mycobacteria	Bacteria	<i>M. tuberculosis</i>
Small non-enveloped virus	Virus	Poliovirus, Norovirus, Rhinovirus, Hep A
Fungal spores	Fungus	<i>Aspergillus</i> , <i>Penicillium</i> , <i>Trichophyton</i>
Gram negative bacteria	Bacteria	<i>E. coli</i> , <i>Klebsiella</i> including <b>CRE</b> , <i>Pseudomonas</i> , <i>Acinetobacter</i>
Fungi (Vegetative)	Fungus	<i>Candida</i>
Large Virus (non-enveloped)	Virus	Adenovirus, Rotavirus
Gram positive bacteria	Bacteria	<i>Staphylococcus</i> including <b>MRSA</b> <i>Enterococcus</i> including <b>VRE</b>
Virus (enveloped)	Virus	HIV, HBV, HCV, Influenza, Coronavirus

\*Resistant  
Sensitive  
Adapted from Rutala et al. ICHE 2014;35(7):862

---

---

---

---

---

---

---

---

### RESISTANT ORGANISMS

- Antibiotic resistance does NOT confer disinfectant resistance!
  - *E. coli* is *E. coli* whether it can produce a beta lactamase or a carbapenemase
- Antibiotics are more “Lock and Key”
- Disinfectants are more “Dynamite” or “Sledgehammer”

(Weber 2006, Rutala 1997)

---

---

---

---

---

---

---

COMMUNICATION

- Difficult during panic
  - Facility Outbreaks
  - New Organisms
  - Pandemic Problems

---

---

---

---

---

---

---

HOW TO COMMUNICATE

- Get the facts
  - Reliable sources
  - CDC, WHO, Public Health Agency of Canada (PHAC), APIC, ProMed
- Aim for Grade 6-8 (newspaper) level of language
  - Avoid jargon unless necessary

---

---

---

---

---

---

---

SARS

---

---

---

---

---

---

---

---

Ebola

---

---

---

---

---

---

---

---

○ SARS-CoV-2  
S. Korea

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

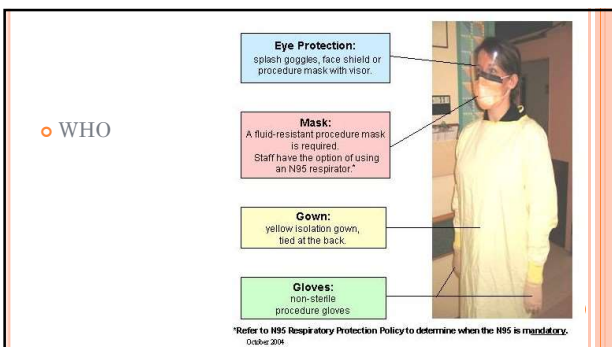

---

---

---

---

---

---

---

---

---

---

---

---

---

PUBLIC HEALTH AGENCY OF CANADA (PHAC)

- ...contact and droplet precautions should be used:
  - Gloves and a gown should be worn upon entering the patient's room;
  - Facial protection (mask and eye protection, or face shield, or mask with visor attachment) should be used when within two metres of the patient;
  - A fit-tested N95 respirator (including eye protection) should be used by all HCWs in the patient's room when AGMPs are being performed on a person under investigation for COVID-19.

---

---

---

---

---

---

---

---

HOW TO COMMUNICATE

- Get the facts out there
  - Newsletters
  - Bulletins
  - Huddles or Town Hall Meetings

---

---

---

---

---

---

---

---

LOOK AFTER OURSELVES!

- Very stressful times
  - So much mis-information
- We all need to re-charge
  - Mindfulness
  - Family
  - Downtime

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

SUMMARY

- There are always going to be new problems – DON'T PANIC
- Keep in mind Chain of Transmission and horizontal infection control
  - Doing activities that protect patients from all organisms
    - Appropriate use of disinfectants including point of care
    - Patient hand hygiene

---

---

---

---

---

---

---

---

SUMMARY

- Infection Preventionists need to be more involved in analyzing the data from this pandemic
  - To have evidence based recommendations for all healthcare settings

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---
