You are the trip leader on your journey to the Canning Stock Road. While driving you are called on the radio to assist a passenger in the car behind you. When you arrive you notice that Steve appears pale, sweaty, confused and drowsy. The driver states approximately 10 minutes ago steve began to feel tired and kept closing his eyes. You ask the driver for some information and are provided with the following:

Allergies:	
	MIDC:
Alici gics.	yıcə.

Morphine Penicillin

Medical	History	:
---------	---------	---

Asthma Hypertension Diabetes Heart attack 2015

- 1) Is there any immediate life threats to this patient? (1 mark)
- 2) Should you leave him in the car or take him out? (1 mark)
- 3) List some possible causes of Steve's signs and symptoms? (2 marks)
- 4) Conduct a thorough secondary survey on Steve (3 marks)

- 6) What would be involved in your treatment? (2 marks)
- 7) Soon after providing correct treatment Steve begins to show signs of improvement. He is more awake, less confused and has good skin colour. What further action should you take? (2 marks)
- 8) What are some signs and symptoms of hyperglycaemia? (2 marks)
