

Are the kids safe?

Are you a School Principal or Business Manager?

How are you managing threats to students, staff, and visitors?

AARC-EVAC™ provides the latest technology for assisting to manage threats and other emergencies in educational facilities.

Duress

Evacuate

Lock Down

First Aid

A single solution to complex threats

School safety is a complex, emotional issue. On any given day the school community represents a huge captive population of students, staff and visitors.

Medical emergency, malicious intruders, aggressive parents, fire, and external events including extreme weather are just some of the threats faced.

Emergency Response Plans (ERPs) are supported by process, procedures, staff training, and technologies that facilitate effective communication and decision making in an actual emergency. A core component of these plans is the utilisation of Evacuations and Lockdowns as a response, triggered by a notification system.

AARC-EVAC™ employs the latest technology providing wirelessly-Linked emergency audio and visual systems.

AARC-EVAC™ is an Emergency Voice Alarm Communications (EVAC) systems that can cost-effectively provide the required functionality at a time when school budgets are under pressure.

The AARC-EVAC™ system provides unique advantages to Educational institutions:

- The system facilitates rapid response to incidents at reception, in the playground, or the entire facility via customised multilingual-capable, and if desired, coded voice and tone or musical messaging, in any combination.
- Potential for voice evacuation instructions to be customised to each location within the facility, when standalone receiver message players are incorporated. This feature not available when using the PA interface unit.
- Wireless design allows simple deployment of up to a total of 14 alarm messages, which includes 12 S.O.S. zones (Duress and/or First Aid) with unique assistance call messages in new or existing facilities, the system includes fixed and/or portable transmitters.
- System design and installation is simple, minimising cost and disruption.
- Installation cost savings can exceed 60% compared to cabled systems.

A simple, yet powerful and cost-effective Security and Safety solution

AARC-EVAC™ wirelessly-linked systems provide a range of Security and Safety communications via pre-recorded voice messaging and standard emergency tones including:

Lock Down

Duress

Evacuation

First Aid

enabling the effective notification and management of urgent and emergency situations including staff duress, medical emergency, fire, and other threats.

Lockdown

Provide Lockdown messages to secure buildings against external threats.

Evacuation

Evacuation Siren with Voice Messages, providing improved access to triggers and clear evacuation instructions.

Duress

Provide additional security & peace of mind for education professionals and school office reception staff.

First Aid

Improved First Aid response time to accidents, injuries and medical incidents.

Help is just a click away!

Evacuation

Triggers Australian Standard Evacuation Tones plus a customised recorded voice message delivering instructions on evacuation of the premises and the assembly point.

Lockdown

In the event of an external threat, Lockdown triggers a covert recorded message or a public warning signalling staff to begin a lockdown procedure.

First Aid

In the event of an accident, injury or medical incident, triggering the First Aid button will call for assistance to that location. Up to 12 customised S.O.S. message zones can be established within each system.

Duress

Single or Multiple Alert Panels can trigger a zoned message, customised to call for assistance to its particular zone. Up to 12 customised S.O.S. message zones can be established within each system.

Note: The number of available S.O.S. message zones are divided between First Aid and Duress.

Risk reduction for students, staff and visitors alike.

Large range of equipment available to meet your specific needs!
