

Question 1: N/A

Question 2: N/A

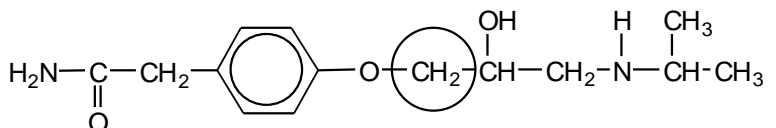

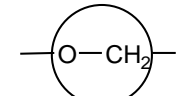

Question	Marking Guidance	Mark	Comments
3(a)	mol CH ₃ OH = 0.07(0) mol H ₂ = 0.24(0)	1 1	
3(b)(i)	$\frac{[\text{CH}_3\text{OH}]}{[\text{CO}][\text{H}_2]^2}$ or $\frac{(0.082/1.5)}{(0.210/1.5)(0.275/1.5)^2}$	1	allow () but expression using formulae must have brackets alternative expression using numbers must include volumes
3(b)(ii)	<p>M1 divides by vol</p> <p>M2 $\frac{(0.082/1.5)}{(0.210/1.5)(0.275/1.5)^2} \quad (= \frac{(0.05467)}{(0.14)(0.1833)^2})$</p> <p>M3 11.6 or 11.7</p> <p>M4 mol⁻² dm⁶</p>	<p>1</p> <p>1</p> <p>1</p> <p>1</p>	<p>Mark independently from (b)(i) any AE is –1 if volume missed, can score only M3 and M4</p> <p>mark is for correct insertion of correct numbers in correct Kc expression in b(ii) If Kc expression wrong, can only score M1 & M4 If numbers rounded, allow M2 but check range for M3</p> <p>mark for answer above 11.7 up to 12.2 scores 2 for M1 and M2 if vol missed, can score M3 for 5.16 (allow range 4.88 to 5.21)</p> <p>Units conseq to their Kc in (b)(ii)</p>
3(b)(iii)	no effect or no change or none	1	

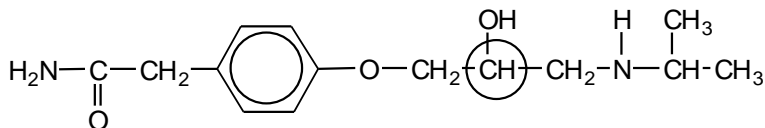

3(c)	M1 T_1		1	if wrong - no further marks only award M3 if M2 is correct not just to oppose the change
	M2	(forward) reaction is exothermic OR gives out heat	1	
	M3	shifts to RHS <u>to replace lost heat</u> OR <u>to increase the temperature</u> OR <u>to oppose fall in temp</u>	1	
3(d)	fossil fuels used OR CO_2 H_2O produced/given off/formed which are <u>greenhouse gases</u> OR SO_2 produced/given off/formed which causes acid rain OR Carbon produced/given off/formed causes global dimming		1	not allow electricity is expensive ignore just global warming ignore energy or hazard discussion
3(e)	$\text{C}_{17}\text{H}_{35}\text{COOCH}_3$ or $\text{C}_{17}\text{H}_{31}\text{COOCH}_3$ or $\text{C}_{17}\text{H}_{29}\text{COOCH}_3$ OR $\text{CH}_3\text{OOC}\text{C}_{17}\text{H}_{35}$ or $\text{CH}_3\text{OOC}\text{C}_{17}\text{H}_{31}$ or $\text{CH}_3\text{OOC}\text{C}_{17}\text{H}_{29}$		1	

Question	Marking Guidance	Mark	Comments
4(a)	3-hydroxypropanoic acid	1	allow 3-hydroxypropionic acid must be correct spelling
4(b)(i)	<p>must show trailing bonds</p> $\text{---O---CH}_2\text{---CH}_2\text{---}\overset{\text{O}}{\underset{\parallel}{\text{C}}}\text{---O---CH}_2\text{---CH}_2\text{---}\overset{\text{O}}{\underset{\parallel}{\text{C}}}\text{---}$ <p>or can start at any point in the sequence, e.g.</p> $\text{---CH}_2\text{---CH}_2\text{---}\overset{\text{O}}{\underset{\parallel}{\text{C}}}\text{---O---CH}_2\text{---CH}_2\text{---}\overset{\text{O}}{\underset{\parallel}{\text{C}}}\text{---O---}$	1	<p>not allow dimer</p> <p>allow $\text{---O---CH}_2\text{CH}_2\text{COOCH}_2\text{CH}_2\text{CO---}$ or $\text{---CH}_2\text{CH}_2\text{COOCH}_2\text{CH}_2\text{COO---}$</p> <p>ignore () or <i>n</i></p> <p>NB answer has a total of 6 carbons and 4 oxygens</p>
4(b)(ii)	condensation (polymerisation)	1	Allow close spelling
4(c)(i)	C=C or carbon-carbon <u>double</u> bond	1	
4(c)(ii)		1	must show ALL bonds including O-H
4(c)(iii)	<p>must show trailing bonds</p> $\begin{array}{cc} \text{H} & \text{H} \\ & \\ \text{---C} & \text{---C---} \\ & \\ \text{H} & \text{COOH} \end{array}$	1	<p>allow polyalkene conseq on their c(ii)</p> <p>ignore <i>n</i></p>

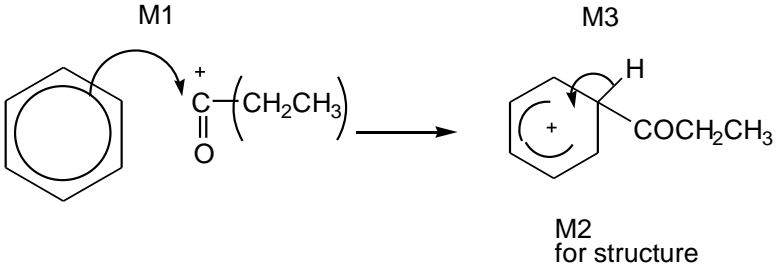

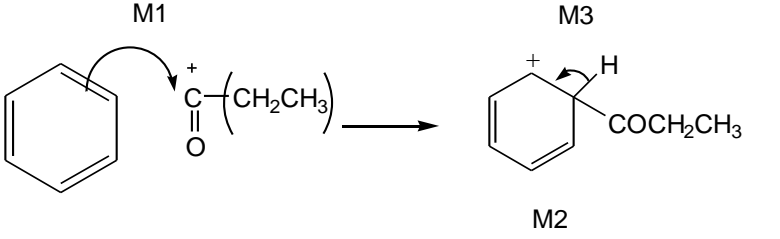

4(d)	$ \begin{array}{c} \text{CH}_2\text{CH}_3 \\ \\ \text{H}_3\text{N}^+ - \text{C} - \text{C} - \text{O}^- \\ \quad \parallel \\ \text{H} \quad \text{O} \end{array} $	1	<p>allow NH_3^+—</p> <p>allow COO^-</p>
4(e)(i)	$ \begin{array}{c} \text{COO}^- \\ \\ \text{H}_2\text{N} - \text{C} - \text{CH}_2 - \text{CH}_2 - \text{COO}^- \\ \\ \text{H} \end{array} $	1	<p>In 4(e), do not penalise a slip in the number of carbons in the $-\text{CH}_2\text{CH}_2-$ chain, but all must be bonded correctly</p> <p>NB two carboxylate groups</p> <p>Allow COONa or $\text{COO}^- \text{Na}^+$ but not covalent bond to Na</p> <p>allow NH_2-</p>
4(e)(ii)	$ \begin{array}{c} \text{COOCH}_3 \\ \\ \text{H}_2\text{N} - \text{C} - \text{CH}_2 - \text{CH}_2 - \text{COOCH}_3 \\ \\ \text{H} \end{array} $ <p>OR</p> $ \begin{array}{c} \text{COOCH}_3 \\ \\ \text{H}_3\text{N}^+ - \text{C} - \text{CH}_2 - \text{CH}_2 - \text{COOCH}_3 \\ \\ \text{H} \end{array} $	1	<p>In 4(e), do not penalise a slip in the number of carbons in the $-\text{CH}_2\text{CH}_2-$ chain, but all must be bonded correctly</p> <p>NB two ester groups</p> <p>allow NH_2- or $^+\text{NH}_3-$</p>

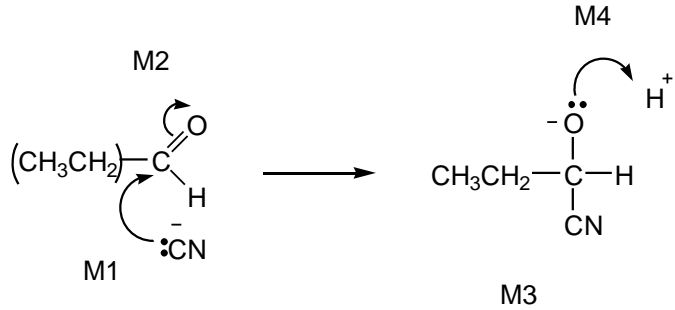

4(e)(iii)	$ \begin{array}{c} \text{COOH} \\ \\ \text{H}_3\text{C}-\text{C}-\text{N}-\text{C}-\text{CH}_2-\text{CH}_2-\text{COOH} \\ \quad \\ \text{O} \quad \text{H} \end{array} $	1	<p>In 4(e), do not penalise a slip in the number of carbons in the $-\text{CH}_2\text{CH}_2-$ chain, but all must be bonded correctly</p> <p>allow anhydride formation on either or both COOH groups (see below) with or without amide group formation</p> $ \begin{array}{c} \text{O} \quad \text{O} \\ \quad \\ \text{C}-\text{O}-\text{C}-\text{CH}_3 \\ \\ \text{H}_3\text{C}-\text{C}-\text{NH}-\text{C}-\text{CH}_2-\text{CH}_2-\text{C}-\text{O}-\text{C}-\text{CH}_3 \\ \quad \quad \quad \\ \text{O} \quad \text{H} \quad \text{O} \quad \text{O} \end{array} $
4(f)	<p>M1 phase or eluent or solvent (or named solvent) is <u>moving or mobile</u></p> <p>M2 stationary phase or solid or alumina/silica/resin</p> <p>M3 separation depends on balance between solubility or affinity (of compounds) in each phase</p> <p>OR different adsorption or retention</p> <p>OR (amino acids have) different R_f values</p> <p>OR (amino acids) travel at different speeds or take different times</p>	<p>1</p> <p>1</p> <p>1</p>	

Question	Marking Guidance	Mark	Comments
5(a)	J (acid) amide K (secondary) amine or amino	1 1	not peptide, not N-substituted amide penalise primary or tertiary allow N-substituted amine
5(b)	(δ =) 3.1-3.9 doublet OR duplet	1 1	Not 3.7 – 4.1 Not secondary name required not the number 2
5(c)(i)	Solvent must be proton-free OR CHCl ₃ has protons or has H or gives a peak	1	
5(c)(ii)	CDCl ₃ is polar OR CCl ₄ is non-polar	1	
5(d)	11 OR eleven	1	
5(e)(i)	Si(CH ₃) ₄ OR SiC ₄ H ₁₂	1	ignore TMS
5(e)(ii)	a single number or a range within 21-25	1	penalise anything outside this range
5(e)(iii)		1	allow ring around the C only and also allow 

5(f)(i)	NaBH ₄	1	ignore name if formula correct ignore solvent allow LiAlH ₄ Zn/HCl Sn/HCl H ₂ /Ni H ₂ /Pt
5(f)(ii)		1	allow ring around the C only
5(f)(iii)	(plane) polarised light OR light in a polarimeter polarised light is not rotated or is unaffected	1 1	 penalise bent/diffracted/deflected/reflected Not just solution is optically inactive
5(f)(iv)	adv cheaper medicine due to cost or difficulty <u>of separation</u> or both can lower blood pressure OR more effective/beneficial <u>with a reason</u> disadv may be side effects from one enantiomer in the mixture or only half the product works or one enantiomer may be ineffective or double dose required	1 1	or no need to separate

10	c		<p>Tollens or ammoniacal silver nitrate</p> 	1	penalise wrong formula
				1	

It is important to note that the guidance given here is generic and specific variations may be made at individual standardising meetings in the context of particular questions and papers.

Basic principles

- **Examiners should note that throughout the mark scheme, items that are underlined are required information to gain credit.**
- **Occasionally an answer involves incorrect chemistry and the mark scheme records CE = 0, which means a chemical error has occurred and no credit is given for that section of the clip or for the whole clip.**
-

A. The “List principle” and the use of “ignore” in the mark scheme

If a question requires **one** answer and a candidate gives two answers, no mark is scored if one answer is correct and one answer is incorrect. There is no penalty if both answers are correct.

N.B. Certain answers are designated in the mark scheme as those which the examiner should “Ignore”. These answers are not counted as part of the list and should be ignored and will not be penalised.

B. Incorrect case for element symbol

The use of an incorrect case for the symbol of an element should be penalised **once only** within a clip. For example, penalise the use of “h” for hydrogen, “CL” for chlorine or “br” for bromine.

C. Spelling

In general

- The names of chemical compounds and functional groups **must be spelled correctly** to gain credit.
- Phonetic spelling may be acceptable for some chemical terminology.

N.B. Some terms may be required to be spelled correctly or an idea needs to be articulated with clarity, as part of the “Quality of Language” (**QoL**) marking. These will be identified in the mark scheme and marks are awarded only if the QoL criterion is satisfied.

D. Equations

In general

- Equations **must** be balanced.
- When an equation is worth two marks, one of the marks in the mark scheme will be allocated to one or more of the reactants or products. This is independent of the equation balancing.
- State symbols are generally ignored, unless specifically required in the mark scheme.

E. Reagents

The command word “Identify”, allows the candidate to choose to use **either** the name or the formula of a reagent in their answer. In some circumstances, the list principle may apply when both the name and the formula are used. Specific details will be given in mark schemes.

The guiding principle is that a reagent is a chemical which can be taken out of a bottle or container. Failure to identify complete reagents **will be penalised**, but follow-on marks (e.g. for a subsequent equation or observation) can be scored from an incorrect attempt (possibly an incomplete reagent) at the correct reagent. Specific details will be given in mark schemes.

For example, **no credit** would be given for

- the cyanide ion or CN^- when the reagent should be potassium cyanide or KCN;
- the hydroxide ion or OH^- when the reagent should be sodium hydroxide or NaOH;
- the $\text{Ag}(\text{NH}_3)_2^+$ ion when the reagent should be Tollens’ reagent (or ammoniacal silver nitrate). In this example, no credit is given for the ion, but credit could be given for a correct observation following on from the use of the ion. Specific details will be given in mark schemes.

In the event that a candidate provides, for example, **both** KCN and cyanide ion, it would be usual to ignore the reference to the cyanide ion (because this is not contradictory) and credit the KCN. Specific details will be given in mark schemes.

F. Oxidation states

In general, the sign for an oxidation state will be assumed to be positive unless specifically shown to be negative.

G. Marking calculations

In general

- A correct answer alone will score **full marks** unless the necessity to show working is specifically required in the question.
- An arithmetic error may result in a one mark penalty if further working is correct.
- A chemical error will usually result in a two mark penalty.

H. Organic reaction mechanisms

Curly arrows should originate either from a lone pair of electrons or from a bond.

The following representations should not gain credit **and will be penalised each time** within a clip.

For example, the following would score zero marks

When the curly arrow is showing the formation of a bond to an atom, the arrow can go directly to the relevant atom, alongside the relevant atom or **more than half-way** towards the relevant atom.

In free-radical substitution

- The absence of a radical dot should be penalised **once only** within a clip.
- The use of double-headed arrows or the incorrect use of half-headed arrows in free-radical mechanisms should be penalised **once only** within a clip

In mass spectrometry fragmentation equations, the absence of a radical dot on the molecular ion and on the free-radical fragment would be considered to be two independent errors and both would be penalised if they occurred within the same clip.

I. Organic structures

In general

- Displayed formulae must show all of the bonds and all of the atoms in the molecule, but need not show correct bond angles.
- Bonds should be drawn correctly between the relevant atoms. This principle applies in all cases where the attached functional group contains a carbon atom, e.g. nitrile, carboxylic acid, aldehyde and acid chloride. The carbon-carbon bond should be clearly shown. Wrongly bonded atoms will be penalised **on every occasion**. (see the examples below)
- The same principle should also be applied to the structure of alcohols. For example, if candidates show the alcohol functional group as C – HO, they should be penalised **on every occasion**.
- Latitude should be given to the representation of C – C bonds in alkyl groups, given that CH₃– is considered to be interchangeable with H₃C– even though the latter would be preferred.
- Similar latitude should be given to the representation of amines where NH₂– C will be allowed, although H₂N– C would be preferred.
- Poor presentation of vertical C – CH₃ bonds or vertical C – NH₂ bonds should **not** be penalised. For other functional groups, such as – OH and – CN, the limit of tolerance is the half-way position between the vertical bond and the relevant atoms in the attached group.

By way of illustration, the following would apply.

allowed	allowed	not allowed			
allowed	allowed	allowed	allowed	not allowed	not allowed

not allowed	not allowed	not allowed	not allowed	not allowed	
not allowed	not allowed	not allowed	not allowed	not allowed	not allowed

- In most cases, the use of “sticks” to represent C – H bonds in a structure should **not** be penalised. The exceptions will include structures in mechanisms when the C – H bond is essential (e.g. elimination reactions in haloalkanes) and when a displayed formula is required.
- Some examples are given here of **structures** for specific compounds that should **not** gain credit

CH₃COH for ethanal

CH₃CH₂HO for ethanol

OHCH₂CH₃ for ethanol

C₂H₆O for ethanol

CH₂CH₂ for ethene

CH₂.CH₂ for ethene

CH₂:CH₂ for ethane

N.B. Exceptions may be made in the context of balancing equations

- Each of the following **should gain credit** as alternatives to correct representations of the structures.

CH₂ = CH₂ for ethene, H₂C=CH₂

CH₃CHOHCH₃ for propan-2-ol, CH₃CH(OH)CH₃

J. Organic names

As a general principle, non-IUPAC names or incorrect spelling or incomplete names should **not** gain credit. Some illustrations are given here.

but-2-ol	should be butan-2-ol
2-hydroxybutane	should be butan-2-ol
butane-2-ol	should be butan-2-ol
2-butanol	should be butan-2-ol
2-methpropan-2-ol	should be 2-methylpropan-2-ol
2-methylbutan-3-ol	should be 3-methylbutan-2-ol
3-methylpentan	should be 3-methylpentane
3-mythylpentane	should be 3-methylpentane
3-methypentane	should be 3-methylpentane
propanitrile	should be propanenitrile
aminethane	should be ethylamine (although aminoethane can gain credit)
2-methyl-3-bromobutane	should be 2-bromo-3-methylbutane
3-bromo-2-methylbutane	should be 2-bromo-3-methylbutane
3-methyl-2-bromobutane	should be 2-bromo-3-methylbutane
2-methylbut-3-ene	should be 3-methylbut-1-ene
difluorodichloromethane	should be dichlorodifluoromethane
