

Integrating International Cleaning Standards in Community Cleaning Efforts

Written By
Bradley Fowler, MA, MSc.

Quite often, questions arise rather adhering to national commercial cleaning standards are better than adhering to international cleaning standards. After all, here in the United States, we are educated on the importance of managing our business environment cleaning health habits, in compliance with our, state and federal cleaning standards. But, is it just as important to adhere to standards set by other countries?

According to the Worldwide Cleaning Association-ISSA, in a video featuring a Canadian spokesperson, there is a rise in community acquired infections. This is due to a growing population and a need to better educate consumers on the role, they play in combating the spread of germs and bacteria. In fact, it is recommended that all commercial cleaning service providers effectively utilize quality commercial cleaning products approved by OSHA and state and federal environment health and safety standards. In doing so, the number of infections can be decreased and help prevent the spread of viruses, germs, and bacteria.

This video compiled from the Worldwide Cleaning Association-ISSA, conveys some interesting facts about the value of integrating effective cleaning actions to control the spread of germs and bacteria in, your work environment. ([View video](#)).

Thus, as a business owner or one who is responsible for hiring reliable cleaning service providers for your office, non-profit, and/or professional business environment. Having clarity on the role, you play in determining how to best combat the spread of germs and bacteria, provides the essential tools needed to effectively eliminate infectious viruses, from your environment altogether.
